Raising Confident, Responsible AI Users

Tips to guide your child in the age of Generative AI

Generative AI can be a powerful learning companion when used wisely. Let's empower our children to explore, question and create — while staying safe and responsible online.

TEACH RESPONSIBLE AI USE

Try these 3 simple ways to guide your child.

1 Know The Tool

Understand how Gen AI tools work and their age advisories. Familiarise yourself with tools such as ChatGPT, Perplexity AI and DALL-E, and check their age requirements before use (generally 13 years and above). Set clear rules with your child, such as seeking your permission before trying new AI tools or websites.

2 Build Critical Thinking in Digital Spaces

Encourage your child to question AI responses: Who created this? Is it true? What's missing? Remind them that AI should not be used for schoolwork unless specifically permitted by their teachers and encourage them to verify AI-generated information with trusted sources.

3 Explore Gen AI Together

Talk openly with your child about their use of Gen AI and explore tools as a family. Try this: Create a fun quiz on your child's favourite topic and check its accuracy together. Partner with schools to support your child's social-emotional needs, reminding them that AI should not replace friendships or support from trusted adults.

THE DANGERS OF AI CHATBOTS

Have honest conversations with your child about these 3 key risks.

1 It agrees with me so easily.

Chatbots may agree just to be helpful, not because it's always right. This can make it hard to see different viewpoints or spot mistakes.

2 It pretends to have feelings.

Chatbots use words that sound caring, but they don't truly feel. They don't understand emotions like humans do.

3 It makes me think it can meet all my needs.

AI can be helpful, but it has limits. It can't replace real people, real experiences or professional help.

Your guidance today shapes your child's digital tomorrow.
