ACE CONNECTS

THE NATIONAL HTA AND GUIDELINES AGENCY • NOV 2026

Dear Healthcare Partner,

This issue highlights opportunities to contribute to evidence-based clinical practice, alongside updates on ACE's latest initiatives.

AT A GLANCE THIS MONTH

- Call for ACE Clinical Guideline (ACG) topics – closing soon
- New clinical guideline on food allergy
- Introduction of the ACE-HSA Priority Track

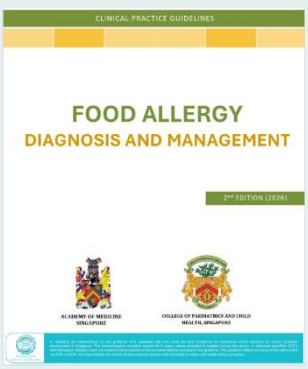
Highlights

Reminder: Call for ACE Clinical Guideline (ACG) Topics Closing Soon

Healthcare professionals from public and private healthcare institutions can submit clinical topics to be considered for development into ACE Clinical Guidelines (ACGs).

👉Submit an ACG topic here. Applications close 13 November 2026.

New clinical guideline on food allergy



Developed by the College of Paediatrics and Child Health, Singapore (CPCHS) and methodologically validated by ACE, the new clinical guideline provides an evidence-based framework to support healthcare professionals in the diagnosis, assessment and management of food allergy.

Introduction of the ACE-HSA Priority Track

Announced on 12 October 2026, the Agency for Care Effectiveness (ACE)–Health Sciences Authority (HSA) Priority Track is a joint initiative aimed at supporting more timely patient access to selected high impact health technologies. Through early information sharing, coordinated stakeholder engagement and closer alignment of regulatory review timelines, the Priority Track aims to shorten the time between regulatory approval and health technology assessment (HTA) decision.

Regulatory and HTA decisions remain independent, with existing standards for clinical effectiveness, safety, and value maintained.
