

Power your Agentic Workplace Transformation with Google Cloud

Google Cloud

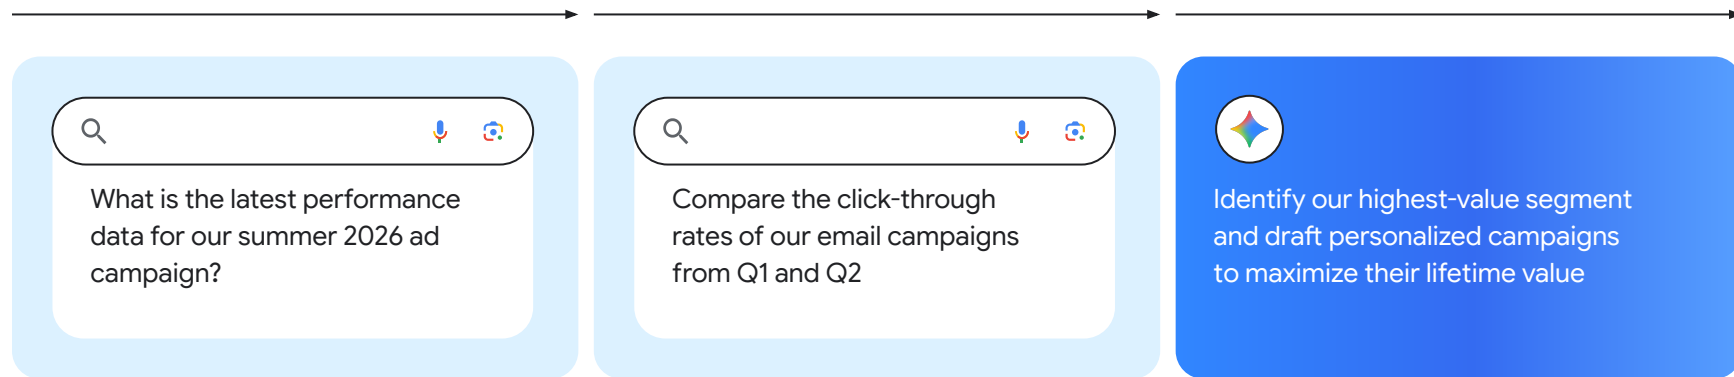

The era of passive AI is over.

Agentic transformation has arrived.

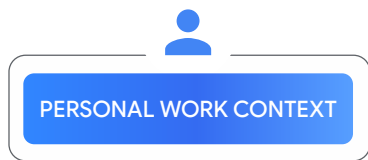

Chat

Think and reason

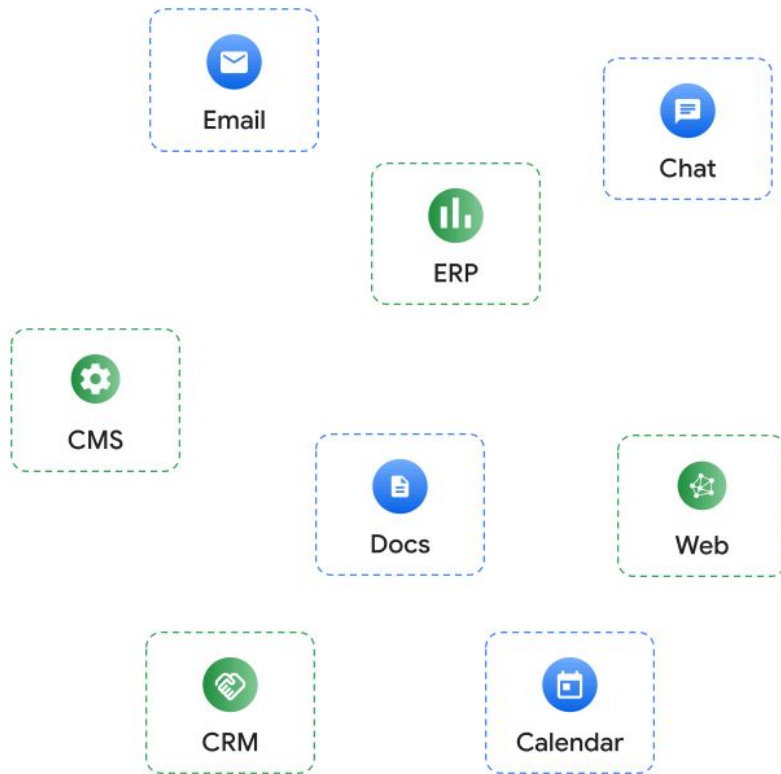

Execute

Using different tools to execute your agentic vision will only introduce context walls that stall your momentum

This limits the potential for both human and AI agents from doing their best work

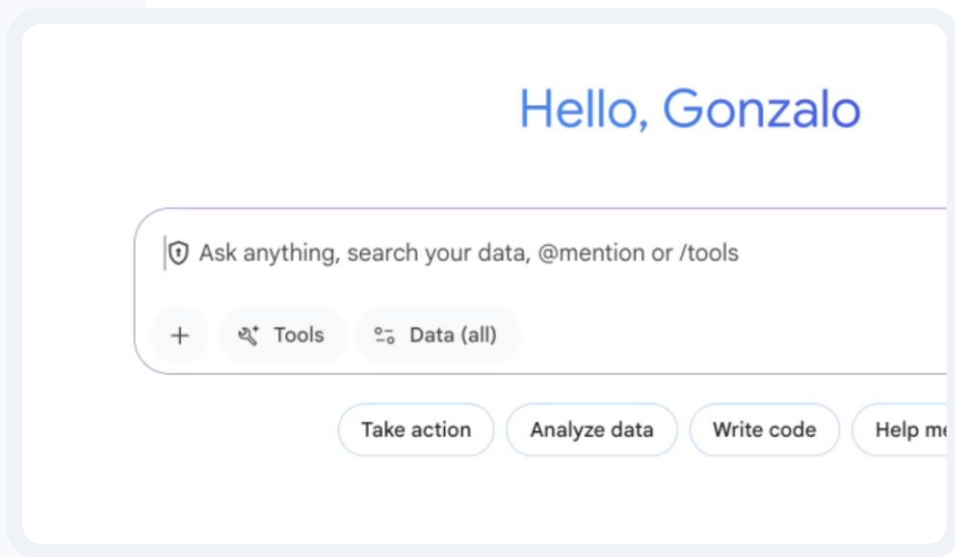

At Google, we believe agentic transformation
requires a foundation of secure, mobilized
enterprise context that gives you the power
to build the future of work

Gemini Enterprise app

Your home for agentic workplace transformation

Achieve absolute enterprise productivity with AI grounded in your business data

- Build, manage and deploy agents from a single, purpose-built app
- Connect enterprise data to employee workflows
- Seamlessly create, view and edit work across applications, all in one place
- Put the latest Google AI innovations in the hands of all your employees

Gemini Enterprise app unifies context across your systems into a single, secure location

Foundation of enterprise productivity **powered by Gemini**

...and many more

Agents supporting every employee and workflow

Built on a trusted, resilient platform
with enterprise grade compliance, security and sovereignty controls

Gemini Enterprise app combines individual AI and enterprise productivity to **make your entire business stronger**

Individual productivity

New ways of working across shared, enterprise context

Enterprise transformation

Build and scale agents across your enterprise

Governance controls

Manage every agentic action with security and cost controls

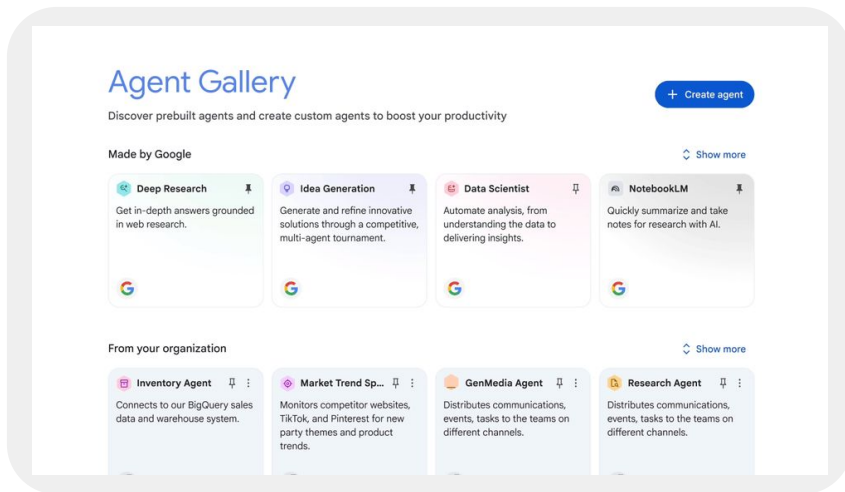

Individual productivity

Work scales from one person to the organization without losing context - so individual effort compounds into enterprise knowledge.

- **Unify your digital workplace** by bringing enterprise apps and agents in a single, governed home for agentic transformation
- **Elevate your human expertise** by enabling teams and AI agents to collaborate with shared memory
- **Automate complex reasoning** by giving agents a continuous thread of context, allowing them to solve multi-step problems
- **Build agents with ease** using best-in-class tools at the right level of abstraction for every user

Use case spotlight

A sales rep leverages a personal **Deal Desk Skill** to drop a prospect's unique requirements into **HubSpot** and instantly generates a fully priced, technically validated proposal PDF from the **Docgen Agent**, **cutting their quote-generation time from hours to seconds**

Unleashing individual productivity: **Gemini Spark** is your 24/7 personal AI agent

Delegate complex work

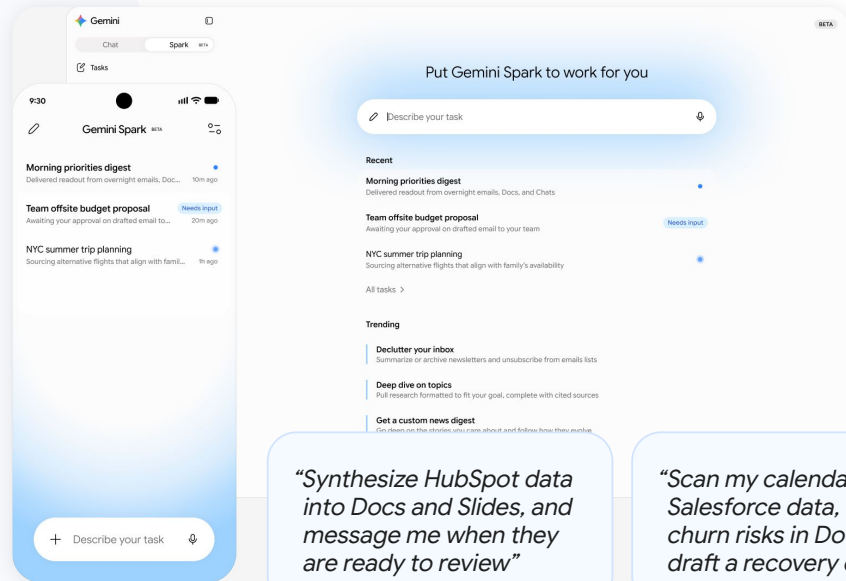

Offload complex, long-running tasks for agents to execute autonomously

Personalize and connect

Adapts to you, integrating with your tools and remembering your preferences over time

Maintain control

Agents operate securely and require your approval for major actions

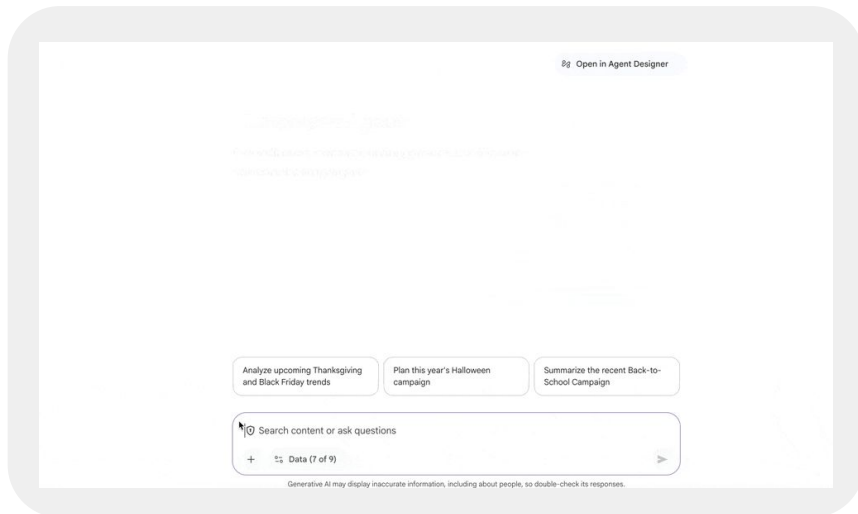

Enterprise transformation

Scale best practices by curating, publishing and sharing agents org-wide, ensuring workflows are reusable by every team

- **Maximize business impact** by creating high-quality agents integrated with your systems
- **Solve complex business needs** by giving advanced developers the programmatic freedom to build sophisticated agents
- **Instantly leverage an elite ecosystem of expertise** by bringing top-tier agents, skills and connectors into your own infrastructure
- **Meet users where they are** by extending agent interactions into the apps your teams already use

Use case spotlight

Marketing's central **Brand Guidelines Skill** allows any employee to drop a campaign concept into **Asana** and instantly get brand-approved visuals from the **Imagen agent**, **saving days of creative wait-time while ensuring total visual consistency**

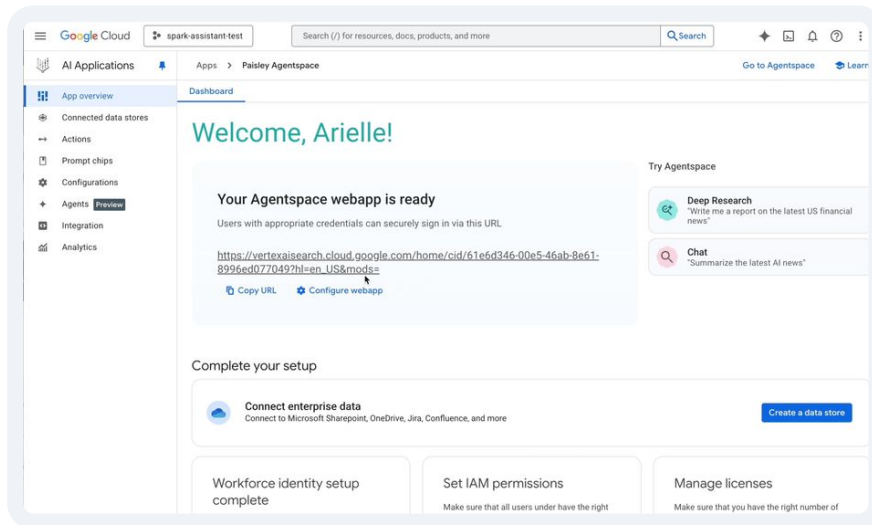

Governance controls

Centralized control guarantees your agents respect organizational guardrails, security standards and cost limits

- **Establish unified enterprise guardrails** by managing every agent through a central stack, ensuring all activity is universally governed
- **Enforce strict info barriers** by giving every agent its own unique identity, ensuring agents only access data they are authorized to
- **Guarantee secure agent behavior** by applying real-time policy enforcement across your entire agent ecosystem
- **Predict agent costs** by making compute limits an institutional control rather than an individual choice

Use case spotlight

Security teams use **Agent Registry** to centrally manage permissions, ensuring a specialized finance agent only accesses approved **OneDrive** folders and never leaks sensitive data in **Slack**, **establishing bulletproof data governance and eliminating risk of accidental exposure**

With Gemini Enterprise app, you can have it all

AI innovation

Gemini Enterprise

Enterprise trust

Industry-leading AI innovation with frontier 1P models

Generative media models and native multimodality

Deep search expertise and native integration with Google Search

Enterprise-grade security & privacy

Granular governance controls

Compliance certifications

Paired with **Google Workspace**, your workforce gains shared context and boundless collaboration

Boost productivity in the flow of work

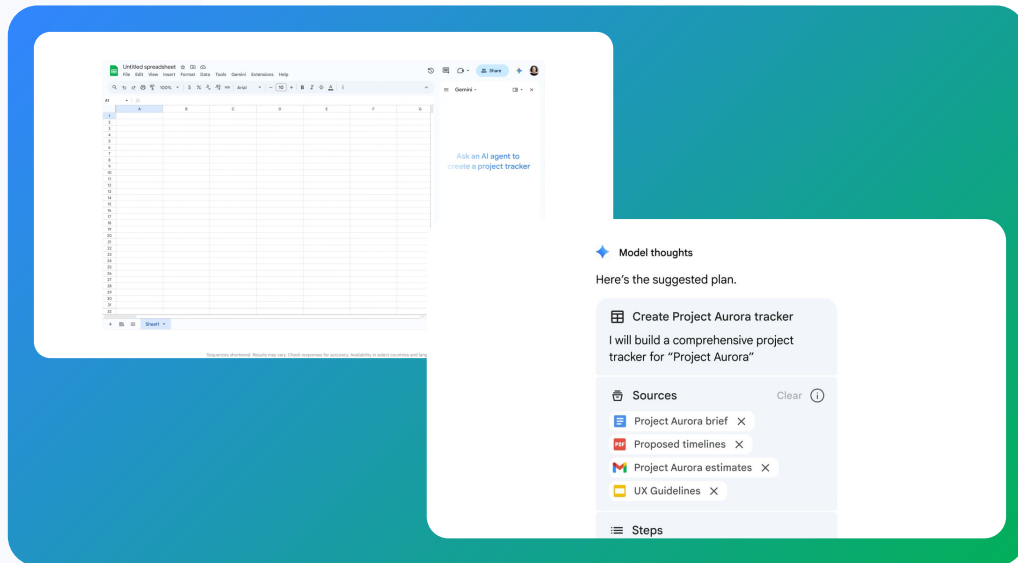

AI is woven into the fabric of Workspace, delivering assistance exactly when and where employees need

Scale securely with AI-powered execution

Agents operate under secure, governed identities to brainstorm, build and execute alongside humans

Achieve more relevant outcomes, faster

Agents have full individual context and preferences, removing need for complex prompts or uploads

Google Cloud is built for the agentic era
