

Consumer Price Developments in November 2025

Summary

- MAS Core Inflation held steady at **1.2%** year-on-year (y-o-y) in November, unchanged from October.
 - This was because higher services inflation was offset by lower retail & other goods inflation and a steeper decline in the cost of electricity & gas.
 - On a month-on-month (m-o-m) basis, core prices edged down by **0.1%** in November.
- CPI-All Items inflation came in at **1.2%** y-o-y in November, unchanged from October.
 - This mainly reflected accommodation and core inflation remaining unchanged.
 - On a m-o-m basis, CPI-All Items prices rose by **0.2%** in November.

Chart 2: % Point Contribution to Year-on-year CPI-All Items Inflation

* Private transport and accommodation are excluded from the MAS Core Inflation measure.

Source: MAS, MTI estimates

CPI-All Items inflation was unchanged at 1.2% y-o-y in November.

CPI-All Items

CPI-All Items inflation was unchanged as higher services inflation was offset by a moderation in private transport and retail & other goods inflation as well as a sharper decline in electricity & gas prices.

Private Transport

Private transport inflation eased on the back of a smaller increase in car prices.

Retail & Other Goods

Retail & other goods inflation dipped as the prices of clothing & footwear and other appliances for personal care declined.

Electricity & Gas

Electricity & gas prices fell more sharply on account of a larger decline in electricity costs.

Accommodation

Accommodation costs rose at a steady pace as housing rents increased at a similar rate in October and November.

Food

Food inflation was unchanged as the prices of food services and non-cooked food increased at the same pace as in October.

Services

Services inflation edged up due to larger increases in the costs of point-to-point transport services and health insurance.

Outlook

Singapore's imported costs should continue to decline, albeit at a slower pace, in the months ahead. Global crude oil prices are projected to fall more gradually in 2026 compared to 2025, while regional inflation should pick up modestly after their weak outturns this year.

On the domestic front, administrative factors temporarily dampening inflation are expected to continue tapering over the coming quarters. Unit labour cost growth should begin to increase as productivity growth normalises, while private consumption demand is likely to remain steady.

Reflecting these factors, MAS Core Inflation is projected to come in at around 0.5% in 2025 before rising to 0.5–1.5% in 2026. CPI-All Items inflation is expected to average 0.5–1.0% in 2025 and 0.5–1.5% in 2026.

The inflation outlook is subject to uncertainties. Supply shocks, including those stemming from geopolitical developments, could lift some imported costs abruptly. However, a sharper-than-expected weakening in global demand could keep core inflation lower for longer. Another significant decline in global oil prices could also temporarily tamp down the pace of price increases.

Annex: Price Indicators

CPI-All Items

The CPI is commonly used as a measure of consumer price changes in the economy. It tracks the change in prices of a fixed basket of consumption goods and services commonly purchased by the general resident households over time.

The CPI covers only consumption expenditure incurred by resident households. It excludes non-consumption expenditures such as purchases of houses, shares and other financial assets and income taxes etc.

The CPI-All Items provides a comprehensive overview of the prices of consumer goods and services. Nevertheless, useful information can also be revealed by complementary CPI series derived by excluding specific items in the All Items basket. For example, two other CPI series reported on a monthly basis are the CPI less Imputed Rentals for Housing and the MAS Core Inflation.

MAS Core Inflation

The Monetary Authority of Singapore (MAS) monitors a core inflation measure that excludes the components of “Accommodation” and “Private Transport”. These items are excluded as they tend to be significantly influenced by supply-side administrative policies and are volatile. Core inflation is meant to capture the generalised and persistent price changes that are driven by underlying demand conditions. It thus provides useful information for monetary policy which has the objective of ensuring price stability in the medium term.

CPI less Imputed Rentals for Housing

Accommodation, one of the groups in the Housing & Utilities expenditure division of the CPI, comprises Actual Rentals for Housing, Imputed Rentals for Housing as well as Housing Maintenance & Repairs.

A significant share of the Accommodation group is Imputed Rentals for Housing, which reflects the costs to homeowners of utilising the flow of services provided by their homes over an extended period of time. Given that the cost of using housing services is not directly observed for homeowners, it is computed based on the imputed rental concept under the rental equivalence method, i.e. proxied by market rentals of similar properties. This provides an estimated rental value for the owned home, as though the homeowner were renting it from themselves. Housing price is not considered in the CPI as it has a high investment component and is treated as a capital good. As for the CPI for Housing Maintenance & Repairs, it takes into account the rebates for Service & Conservancy Charges (S&CC) disbursed to households living in Housing and Development Board (HDB) flats in the applicable months.

Imputed rentals have no impact on the cash expenditure of most households in Singapore as they already own their homes, while the inclusion of S&CC rebates results in some volatility in the monthly CPI. As such, the CPIs for All Items less Accommodation and All Items less Imputed Rentals for Housing are compiled and published as additional indicators. For the CPI for All Items less Imputed Rentals for Housing, actual rentals paid on rented homes are still included in the measure.

CPI Statistics

Detailed CPI statistics can be found in the Department of Statistics' release titled "Singapore Consumer Price Index for November 2025". This release also contains further information on the various price indicators published.
