

HIGHER NITEC IN APPLIED FOOD SCIENCE (2 YEARS)

CERTIFICATION

Credits required for certification:

Sector Foundation Modules	: 6
Specialisation Modules	: 33
Internship Programme Modules	: 8
Life Skills Modules	: 9
Cross Disciplinary Core Modules	: 6
Electives	: 6
Total	: 68

COURSE STRUCTURE

Module Title	Credits
SECTOR FOUNDATION MODULES	
Basic Laboratory Techniques	3
Basic Mathematics	3
SPECIALISATION MODULES	
Introduction to Food Science	3
Food Quality Control	3
Food Processing & Equipment	3
Food Microbiology	3
Food Safety & Hygiene	3
Food Preservation Technology	3
Food Analysis	3
Food Biotechnology	3
Nutrition & Health	3
Food Quality Assurance & Standards	3
Food Product Design & Innovation	3
INTERNSHIP PROGRAMME MODULES	
Internship Programme	8
CROSS DISCIPLINARY CORE MODULES	
Food Business Marketing	3
Urban Farming Basics	3
Sustainability Strategies and Carbon Management	3
ELECTIVES (COURSE SPECIFIC)	
Food Packaging	2
Food Service Operations	2
Sustainable Food Systems	2
Geriatric Health & Nutrition	2
ELECTIVES (GENERAL) AND LIFE SKILLS MODULES	
For details, click here	

Note: The offer of electives is subject to the training schedule of respective ITE Colleges. Students are advised to check with their Class Advisors on the availability of the elective modules they intend to pursue.

MODULE OBJECTIVES

Sector Foundation Modules

Basic Laboratory Techniques

On completion of the module, students should be able to adhere to laboratory safety, maintain the quality standards of chemical laboratory, perform basic laboratory techniques, carry out basic calibration and organise laboratory data.

Basic Mathematics

On completion of the module, students should be able to apply the various mathematical principles such as algebra, perform unit conversion and construct graphs for laboratory data expression and analysis. In addition, they should be able to collate data and perform basic functions using common software programme.

Specialisation Modules

Introduction to Food Science

On completion of the module, students should be able to identify the various food components, including their physical, chemical and functional properties. Students should be able to evaluate the sensory properties of food and conduct sensory evaluation test. Students should be able to ensure that food label comply with legislative and regulatory standards.

Food Quality Control

On completion of the module, students should be able to identify important quality parameters and properties/characteristics of raw materials, ingredients and products that determine their suitability, application and safety in food production. Students should also be able to perform quality inspections using suitable testing equipment and methods to assess if raw materials, ingredients and products meet quality and safety standards.

Food Processing & Equipment

On completion of the module, students will be able to follow the safety requirements in a processing plant, explain the various methods of food preparation/processing, perform recording of process parameters, operate food preparation/processing and packaging equipment safely and carry out appropriate troubleshooting procedure on product and process deviations.

Food Microbiology

On completion of the module, students will be able to determine the quality and safety of food samples/products using suitable microbiological test methods and perform environmental monitoring of food manufacturing facilities to verify/assess effective implementation of preventive controls for pathogens or indicator organisms.

Food Safety & Hygiene

On completion of the module, students should be able to explain the importance of good manufacturing practices (GMP) in maintaining food hygiene standards required in both retail and non-retail food establishments. Students should also be able to perform hygiene inspection at food premises and follow up with appropriate corrective actions for non-conformances observed during inspection.

Food Preservation Technology

On completion of the module, students should be able to apply appropriate preservation technologies/methods (such as smart packaging, chemical and physical preservation methods, etc.) and operate processing equipment to achieve improved shelf stability and safety of food products.

Food Analysis

On completion of the module, students should be able to perform analysis using advanced laboratory and instrumental techniques such as spectroscopy, chromatography, titrimetry, etc., to assess if food products/ingredients meet nutritional, safety and regulatory requirements.

Food Biotechnology

On completion of the module, students will be able to apply basic food biotechnology principles, understand the benefits that biotechnology bring to consumers and gain insight into the application of modern biotechnology in food processing to meet current and future demands.

Nutrition & Health

On completion of the module, students will be able to identify the macro- and micro-nutrients that are essential for human health and understand the relationship between nutrition and health risks/concerns. Students should also be able to utilise nutritional tools, such as My Healthy Plate, nutrient databases, food composition tables, for diet planning and product development.

Food Quality Assurance & Standards

On completion of the module, students should be able to interpret standards relating to various food safety and quality management systems (FSMS), support the development and implementation FSMS, carry out monitoring of quality parameters as well as effective record keeping and documentation to maintain a robust, reliable FSMS.

Food Product Design & Innovation

On completion of the module, students should be able to apply design thinking concepts in the development of food products and understand the principles of various innovative food preparation/processing methods to meet consumers' needs and/or to build a sustainable food system.

Electives (General) and Life Skills Modules
