

Woodlands Gateway

Artist's impression of Woodlands Gateway, a new mixed-use district master-planned and developed by JTC providing flexible industrial spaces, commercial spaces, lifestyle amenities, and transport options connected to the Johor Bahru-Singapore Rapid Transit System (RTS) Link station. (Credit: JTC)

JTC is master-planning and developing the new [Woodlands Gateway district](#), Singapore's northern gateway to the Johor-Singapore Special Economic Zone.

2. The mixed-use district, spanning up to 35 hectares (about 50 football fields), will include a transport hub connected to the RTS Link Station and Woodlands North MRT station. It will provide flexible industrial and office spaces catering to firms siting manufacturing in Johor linked to regional HQ functions in Singapore, as well as some commercial and lifestyle amenities catering to employees and residents in nearby existing and future industrial developments and residential estates.

3. The first phase of Woodlands Gateway is expected to complete around 2030. Subsequent phases will be developed progressively depending on business demand and needs.
