Legally Notifiable STIs**	1383			5056			
Tuberculosis	97			337			

* Provisional figures

Added to the list of notifiable diseases as of 30 Jun 2022. The fourth case of Mpox clade Ib infection was detected in E-week 20 2026. All other cases were clade IIb infections.

^ With effect from E-week 27, 2023, only confirmed cases of MERS will be reported, instead of the number of persons tested.

** With effect from January 2026, national-level STI data will be reported.

Acute Respiratory Infection (ARI) Situation in Singapore 2026

ARI indicators for E-week 21 (24 - 30 May 2026) were as follows:

The average daily number of patients seeking treatment in the polyclinics for ARI was 3169 (over 4.5 working days) in E-week 21.

In E-week 21, the top respiratory pathogens among adult and paediatric samples from the National Surveillance Programme for Acute Respiratory Infection[§] (ARI) were:

- Adult samples: Human rhinovirus/enterovirus (15%), SARS-CoV-2 (13%), and influenza (12%).
- Paediatric samples: Human rhinovirus/enterovirus (32%), parainfluenza viruses (15%) and influenza (11%).

[§] CDA monitors the trends of respiratory pathogens in the community through our sentinel surveillance programme for Acute Respiratory Infections (ARI) which includes polyclinics and selected general practitioner (GP) clinics.

COVID-19 and Influenza

The positivity rate for influenza among ILI samples (n= 146) in the community was 17% in E-week 21. The positivity rate for COVID-19 among ARI samples (n= 288) in the community was 13% in E-week 21.

Of the 21 specimens tested positive for influenza in April 2026, three were positive for influenza A(pH1N1) (14.3%), four were positive for influenza A(H3N2) (19.0%), and 14 were positive for influenza B (66.7%).

Monthly Influenza Surveillance

Based on influenza-like illness (ILI) samples from GPs and polyclinics.

WEEKLY INCIDENCE OF FOOD/WATER-BORNE DISEASES, 2025-2026

WEEKLY INCIDENCE OF VECTOR-BORNE DISEASES, 2025-2026

The number of dengue notifications was 67 in E-week 21.

The number of hospital admissions increased to 7 in E-week 21, compared to 6 in E-week 20.

Preliminary results of all positive dengue samples serotyped in May 2026 showed DEN-1, DEN-2, DEN-3 and DEN-4 at 9.0%, 43.3%, 44.8% and 3.0% respectively.

WEEKLY INCIDENCE OF AIR/DROPLET-BORNE DISEASES, 2025-2026
