* *Provisional figures*

Added to the list of notifiable diseases as of 30 Jun 2022.

§ *Added to the list of notifiable diseases as of 31 Oct 2026.*

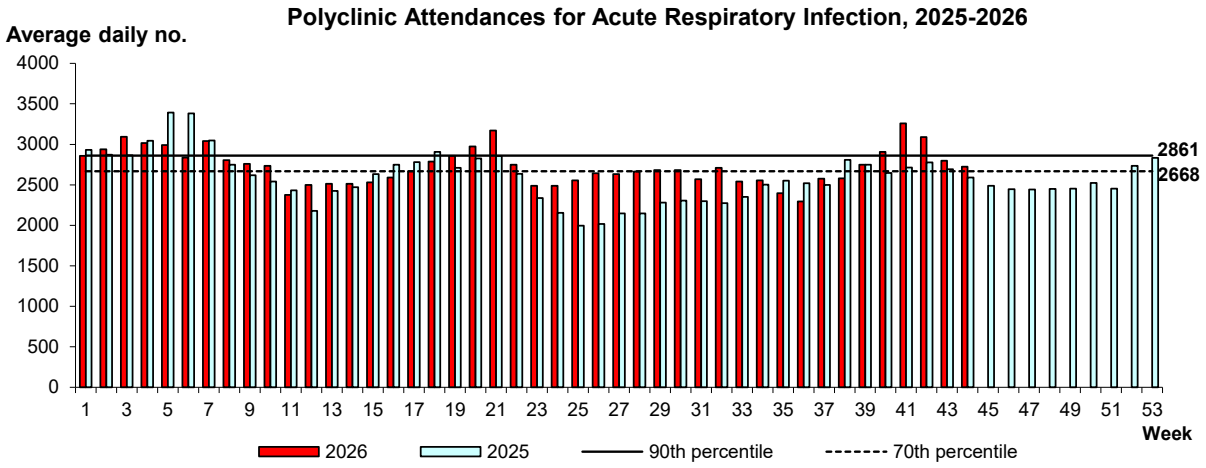

^ *With effect from E-week 27, 2023, only confirmed cases of MERS will be reported, instead of the number of persons tested.*

** *With effect from January 2026, national-level STI data will be reported.*

Acute Respiratory Infection (ARI) Situation in Singapore 2026

ARI indicators for E-week 44 (1 - 7 Nov 2026) were as follows:

The average daily number of patients seeking treatment in the polyclinics for ARI was 2724 (over 5.5 working days) in E-week 44.

In E-week 44, the top respiratory pathogens among adult and paediatric samples from the National Surveillance Programme for Acute Respiratory Infection[§] (ARI) were:

- Adult samples: Human rhinovirus/enterovirus (28%), influenza (16%), and non-SARS seasonal coronaviruses (11%).
- Paediatric samples: Human rhinovirus/enterovirus (33%), influenza (17%), and respiratory syncytial virus (10%).

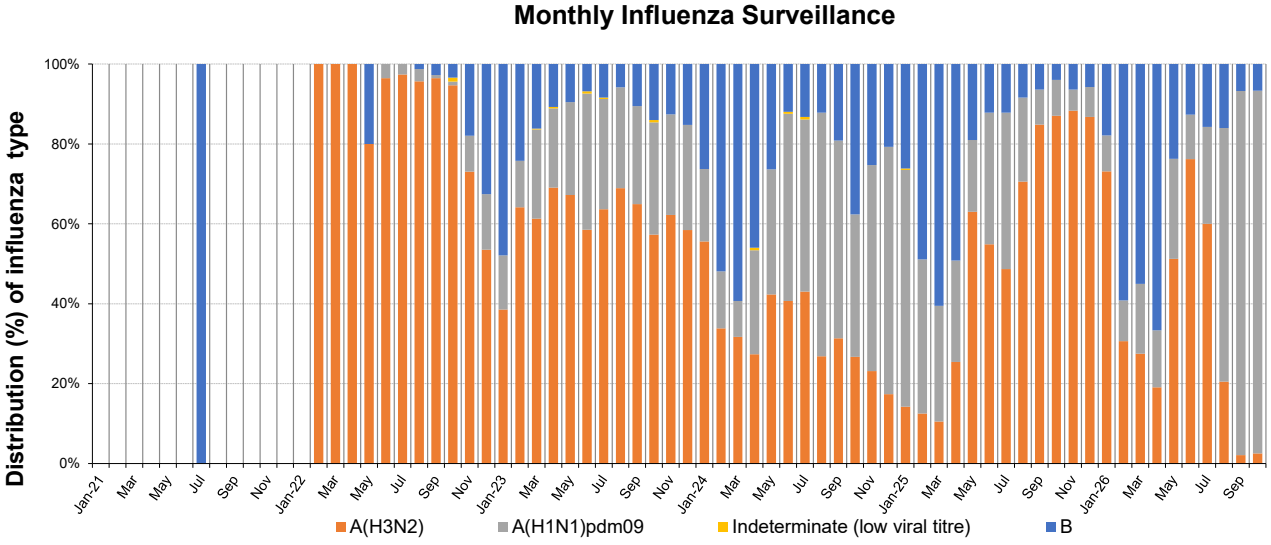

§ CDA monitors the trends of respiratory pathogens in the community through our sentinel surveillance programme for Acute Respiratory Infections (ARI) which includes polyclinics and selected general practitioner (GP) clinics.

COVID-19 and Influenza

The positivity rate for influenza among ILI samples (n= 164) in the community was 22% in E-week 44. The positivity rate for COVID-19 among ARI samples (n= 274) in the community was 2% in E-week 44.

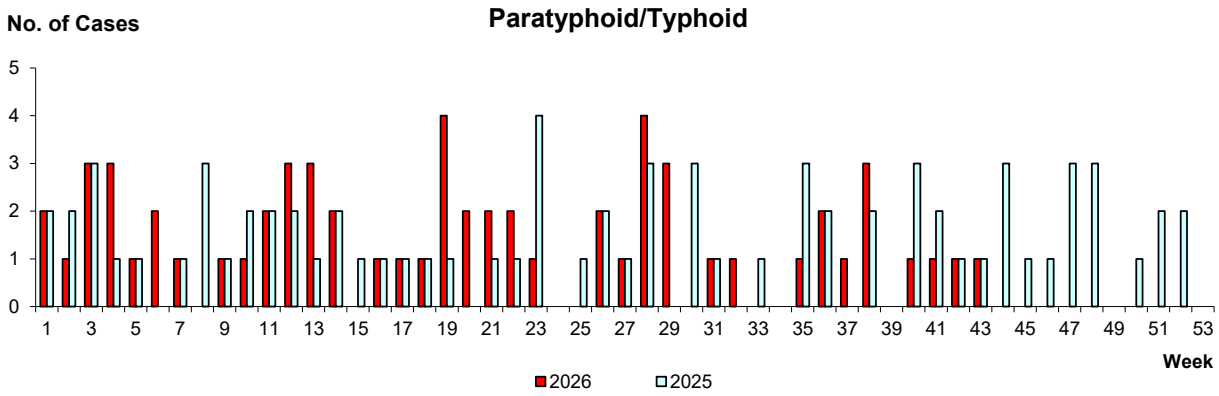

Of the 314 specimens that tested positive for influenza in October 2026, 285 were positive for influenza A(H1N1)pdm09 (90.8%), eight were positive for influenza A(H3N2) (2.5%), and 21 were positive for influenza B (6.7%)***.

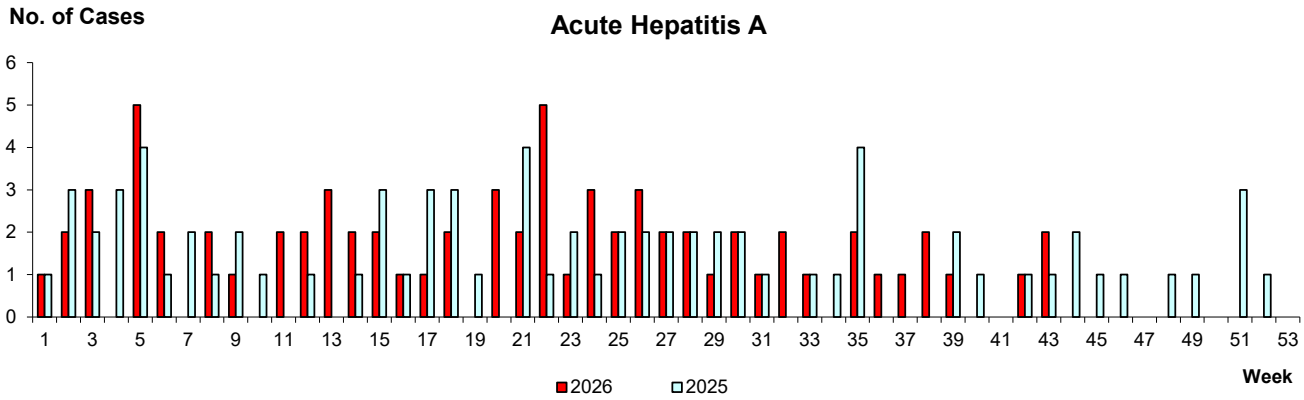

*** *Figures may not add to 100% due to rounding.*

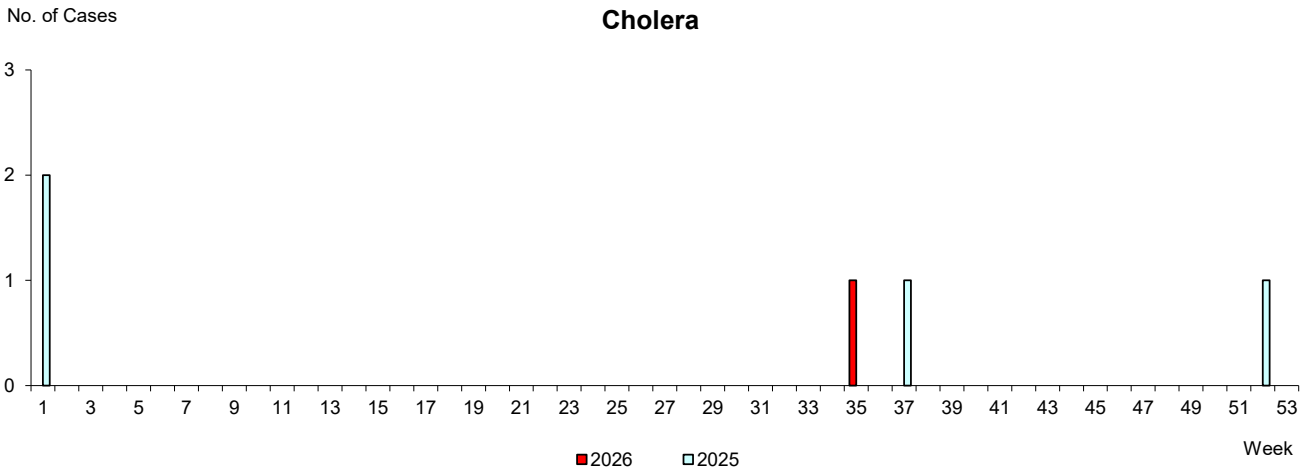

Based on influenza-like illness (ILI) samples from GPs and polyclinics.

WEEKLY INCIDENCE OF FOOD/WATER-BORNE DISEASES, 2025-2026

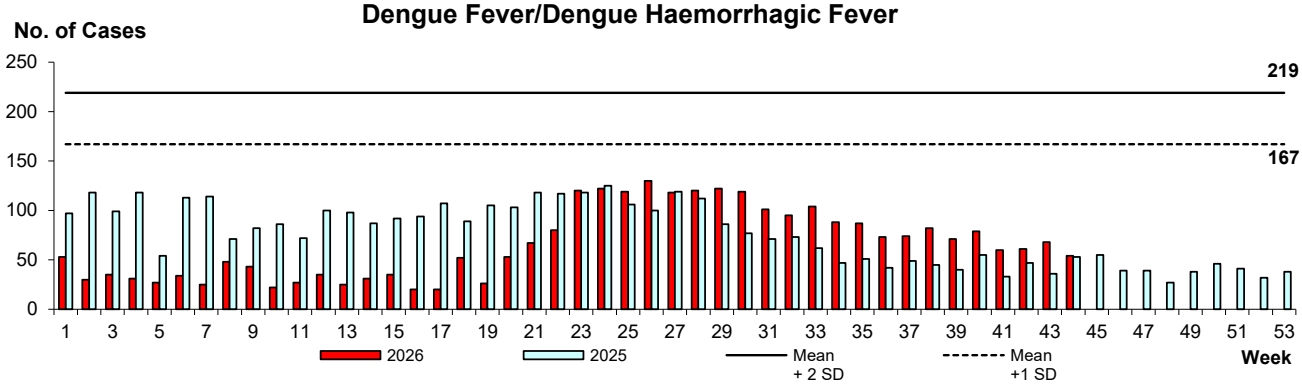

WEEKLY INCIDENCE OF VECTOR-BORNE DISEASES, 2025-2026

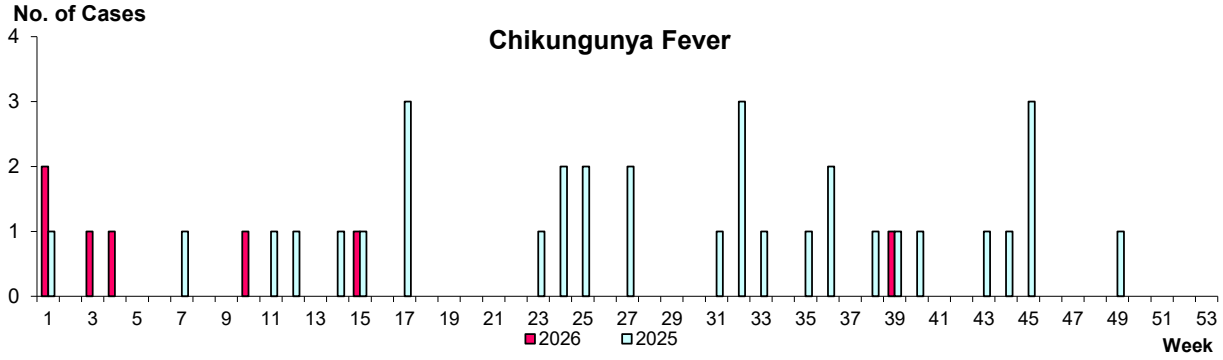

Dengue Fever/Dengue Haemorrhagic Fever

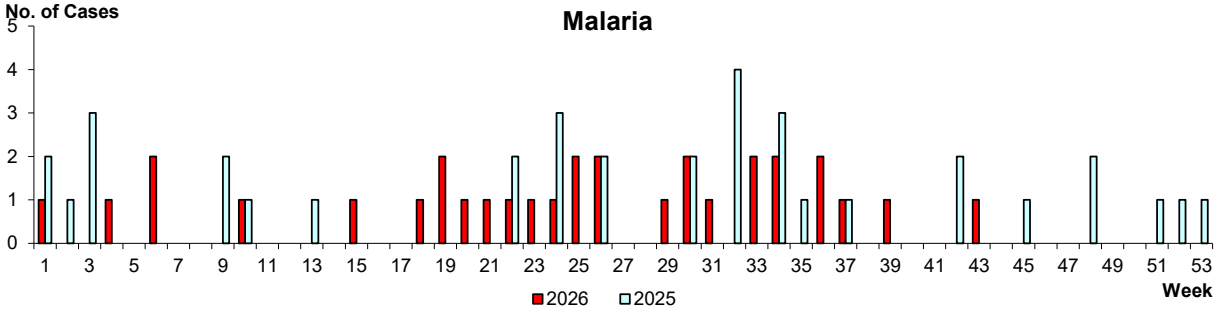

The number of dengue notifications was 54 in E-week 44.
The number of hospital admissions decreased to 7 in E-week 44, compared to 12 in E-week 43.

Preliminary results of all positive dengue samples serotyped in Oct 2026 showed DEN-1, DEN-2, DEN-3 and DEN-4 at 35.2%, 21.0%, 42.9% and 1.0% respectively.
