Tuberculosis	101			101			

[†] Provisional figures

[‡] Added to the list of notifiable diseases as of 30 Jun 2022. To date, all mpox infections detected have been Clade IIb infections.

[^] With effect from E-week 27, 2023, only confirmed cases of MERS will be reported, instead of the number of persons tested.

** With effect from January 2026, national-level STI data will be reported.

Acute Respiratory Infection (ARI) Situation in Singapore 2026

ARI indicators for E-week 8 (22 - 28 Feb 2026) were as follows:

The average daily number of patients seeking treatment in the polyclinics for ARI was 2801 (over 5.5 working days) in E-week 8.

In E-week 8, the top respiratory pathogens among adult and paediatric samples from the National Surveillance Programme for Acute Respiratory Infection[§] (ARI) were:

- Adult samples: Human rhinovirus/enterovirus (19%), influenza (7%), and parainfluenza viruses (7%).
- Paediatric samples: Human rhinovirus/enterovirus (28%), parainfluenza viruses (15%), and human metapneumovirus (11%).

[§] CDA monitors the trends of respiratory pathogens in the community through our sentinel surveillance programme for Acute Respiratory Infections (ARI) which includes polyclinics and selected general practitioner (GP) clinics.

COVID-19 and Influenza

The proportion of patients with influenza-like illness (ILI) among the polyclinic attendances for ARI was 0.4%. The positivity rate for influenza among ILI samples (n= 157) in the community was 12% in E-week 8. The positivity rate for COVID-19 among ARI samples (n= 309) in the community was 2% in E-week 8. Of the 49 specimens tested positive for influenza in February 2026, five were positive for influenza A(pH1N1) (10%), 15 were positive for influenza A(H3N2) (31%), and 29 were positive for influenza B (59%).

Monthly Influenza Surveillance

Based on influenza-like illness (ILI) samples from GPs and polyclinics

WEEKLY INCIDENCE OF FOOD/WATER-BORNE DISEASES, 2025-2026

WEEKLY INCIDENCE OF VECTOR-BORNE DISEASES, 2025-2026

The number of dengue notifications was 48 in E-week 8.

The number of hospital admissions remains stable at 3 in E-week 8, compared to 3 in E-week 7.

Preliminary results of all positive dengue samples serotyped in February 2025 showed DEN-1, DEN-2, DEN-3 and DEN-4 at 0.0%, 62.5%, 20.8% and 16.7% respectively.

WEEKLY INCIDENCE OF AIR/DROPLET-BORNE DISEASES, 2025-2026
