\* Provisional figures

<sup>#</sup> Added to the list of notifiable diseases as of 30 Jun 2022. To date, all mpox infections detected have been Clade IIb infections.<sup>^</sup> With effect from E-week 27, 2023, only confirmed cases of MERS will be reported, instead of the number of persons tested.<sup>\*\*</sup> With effect from January 2026, national-level STI data will be reported.

### Acute Respiratory Infection (ARI) Situation in Singapore 2026

ARI indicators for E-week 5 (1 - 7 Feb 2026) were as follows:

The average daily number of patients seeking treatment in the polyclinics for ARI was 2992 (over 5.5 working days) in E-week 5.

In E-week 5, the top respiratory pathogens among adult and paediatric samples from the National Surveillance Programme for Acute Respiratory Infection<sup>§</sup> (ARI) were:

- Adult samples: Human rhinovirus/enterovirus (29%), non-SARS seasonal coronaviruses (8%), and parainfluenza viruses (5%)

- Paediatric samples: Human rhinovirus/enterovirus (35%), parainfluenza viruses (14%), and human metapneumovirus (11%).

<sup>§</sup> CDA monitors the trends of respiratory pathogens in the community through our sentinel surveillance programme for Acute Respiratory Infections (ARI) which includes polyclinics and selected general practitioner (GP) clinics.

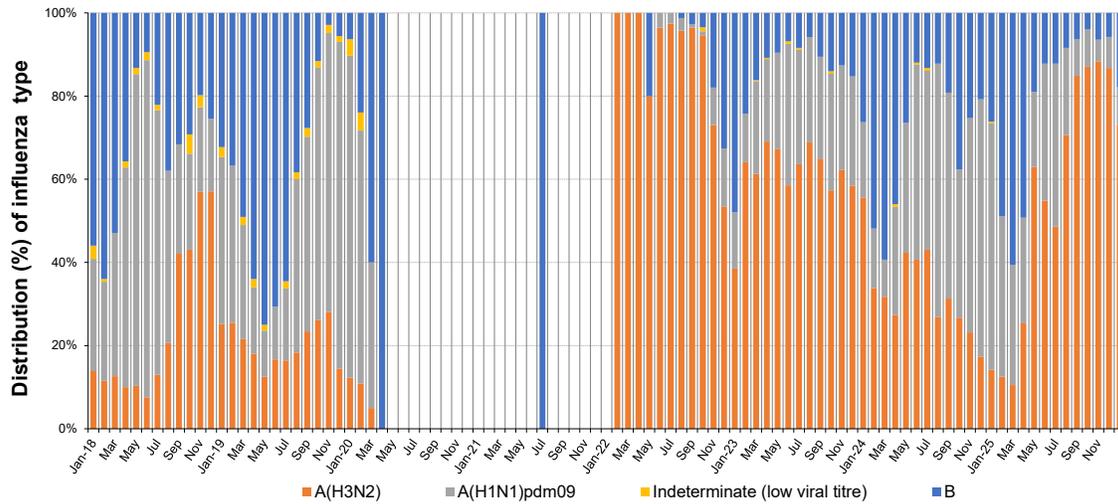

## COVID-19 and Influenza

The proportion of patients with influenza-like illness (ILI) among the polyclinic attendances for ARI was 0.3%.

The positivity rate for influenza among ILI samples (n= 157) in the community was 8% in E-week 5. The positivity rate for COVID-19 among ARI samples (n= 329) in the community was < 1% in E-week 5.

Of the 67 specimens tested positive for influenza in January 2026, six were positive for influenza A(pH1N1) (9%), 49 were positive for influenza A(H3N2) (73%), and 12 were positive for influenza B (18%).

### Monthly Influenza Surveillance

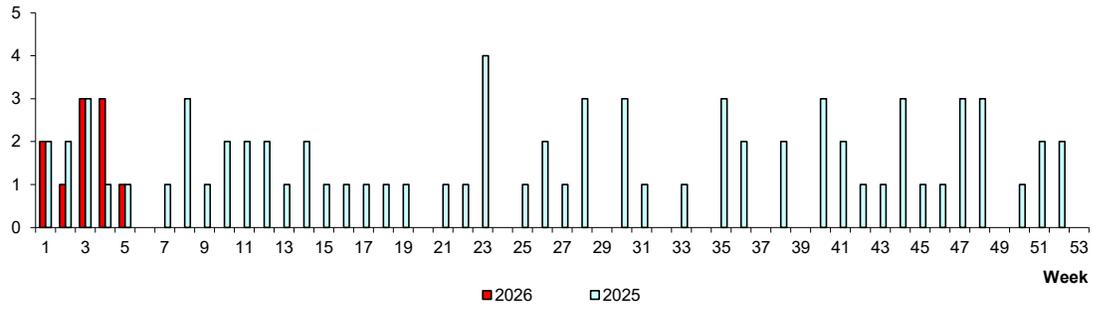

Based on influenza-like illness (ILI) samples from GPs and polyclinics

No. of Cases

## Cholera

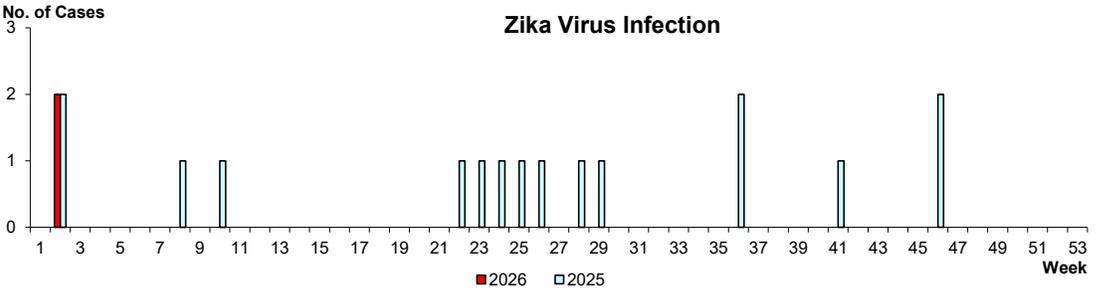

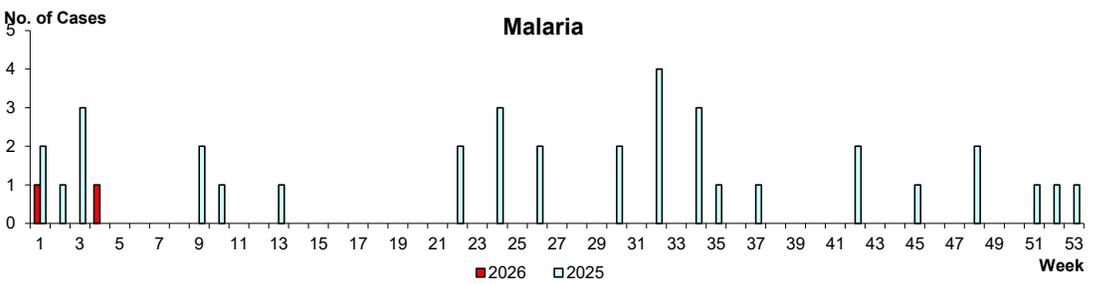

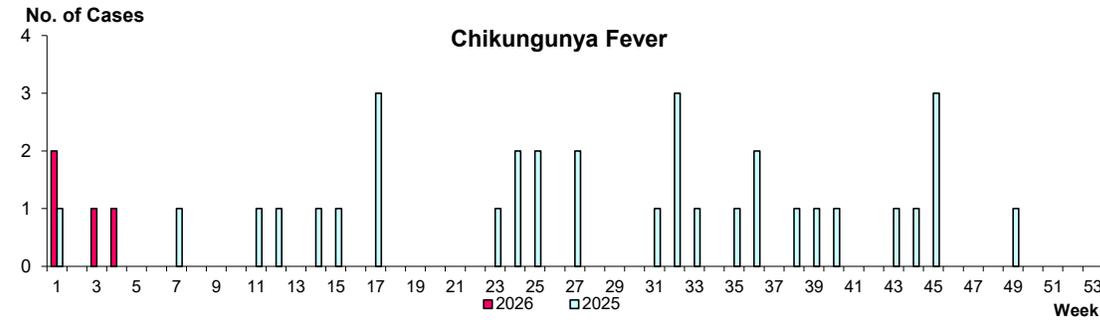

**WEEKLY INCIDENCE OF VECTOR-BORNE DISEASES, 2024-2025**

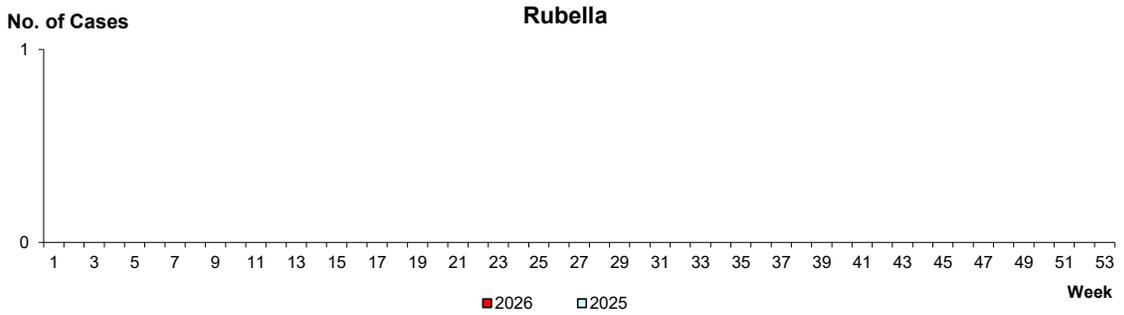

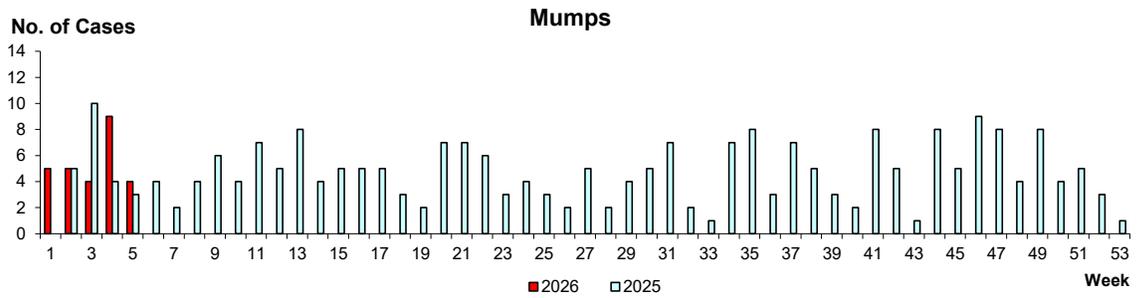

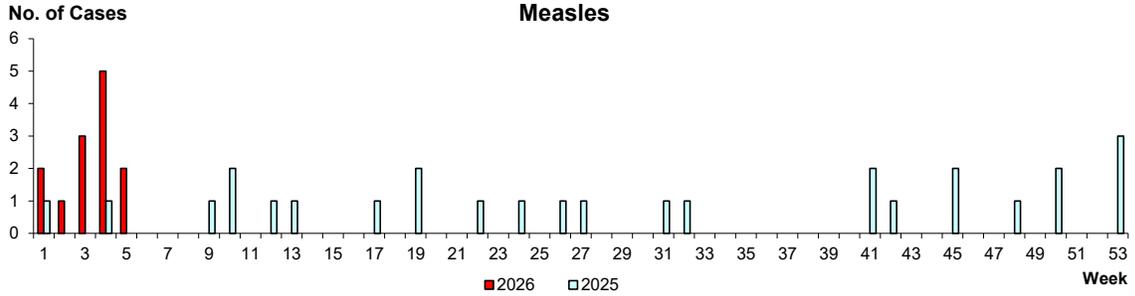

The number of dengue notifications was 27 in E-week 5.

The number of hospital admissions remains stable at 4 in E-week 53, compared to 4 in E-week 52.

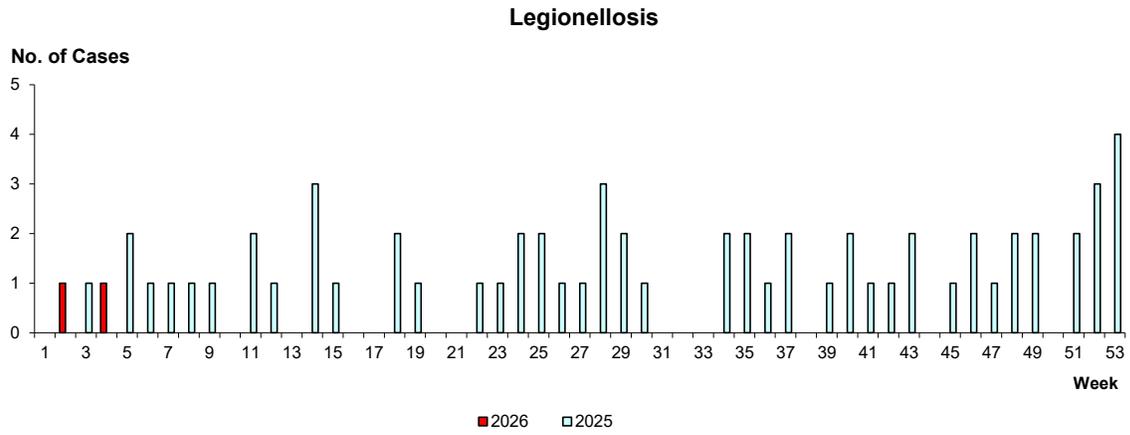

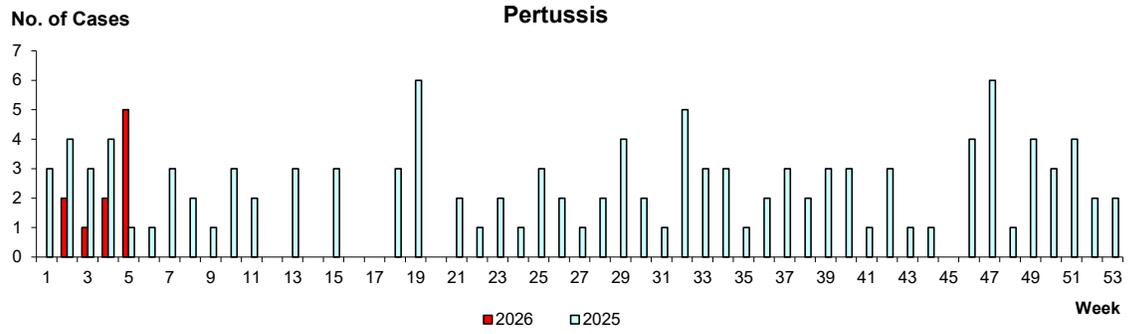

Preliminary results of all positive dengue samples serotyped in December 2025 showed DEN-1, DEN-2, DEN-3 and DEN-4 at 13.2%, 50.9%, 28.3% and 7.5% respectively.
