^{*} Provisional figures

[#] Added to the list of notifiable diseases as of 30 Jun 2022. To date, all mpox infections detected have been Clade IIb infections.

[^] With effect from E-week 27, 2023, only confirmed cases of MERS will be reported, instead of the number of persons tested.

^{**} With effect from January 2026, national-level STI data will be reported.

Acute Respiratory Infection (ARI) Situation in Singapore 2026

ARI indicators for E-week 3 (18 - 24 Jan 2026) were as follows:

The average daily number of patients seeking treatment in the polyclinics for ARI was 3093 (over 5.5 working days) in E-week 3.

In E-week 3, the top respiratory pathogens among adult and paediatric samples from the National Surveillance Programme for Acute Respiratory Infection[§] (ARI) were:

- Adult samples: Human rhinovirus/enterovirus (26%), non-SARS seasonal coronaviruses (14%), and influenza (5%).
- Paediatric samples: Human rhinovirus/enterovirus (36%), parainfluenza viruses (14%), and influenza (9%).

[§] CDA monitors the trends of respiratory pathogens in the community through our sentinel surveillance programme for Acute Respiratory Infections (ARI) which includes polyclinics and selected general practitioner (GP) clinics.

COVID-19 and Influenza

The proportion of patients with influenza-like illness (ILI) among the polyclinic attendances for ARI was 0.4%. The positivity rate for influenza among ILI samples (n= 129) in the community was 13% in E-week 3. The positivity rate for COVID-19 among ARI samples (n= 281) in the community was 1% in E-week 3.

Of the 121 specimens tested positive for influenza in December 2025, nine were positive for influenza A(pH1N1) (7%), 105 were positive for influenza A(H3N2) (87%), and seven were positive for influenza B (6%).

No. of Cases

Cholera

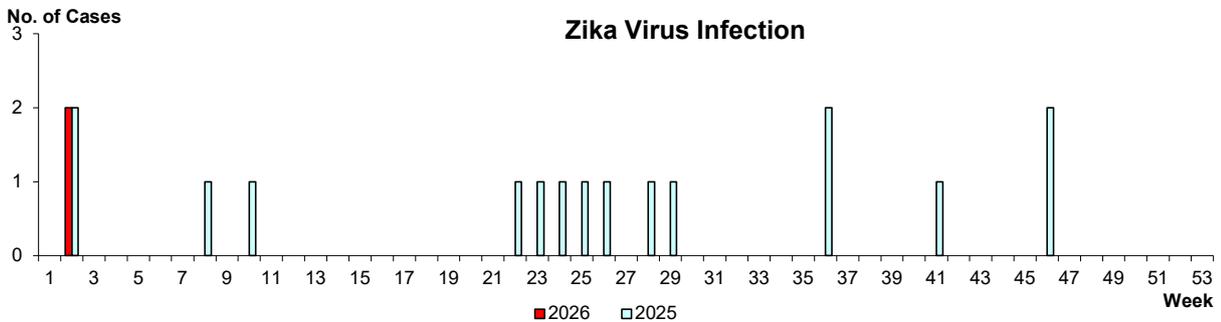

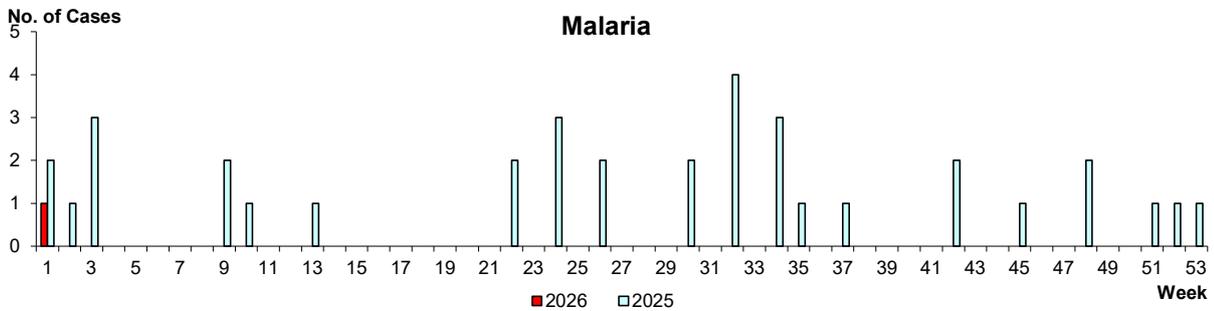

WEEKLY INCIDENCE OF VECTOR-BORNE DISEASES, 2024-2025

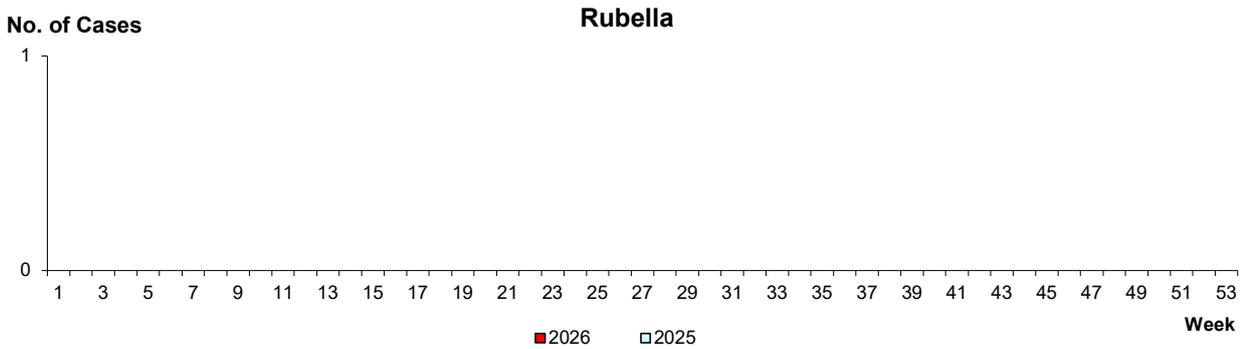

The number of dengue notifications was 35 in E-week 3.

The number of hospital admissions remains stable at 4 in E-week 53, compared to 4 in E-week 52.

Preliminary results of all positive dengue samples serotyped in December 2025 showed DEN-1, DEN-2, DEN-3 and DEN-4 at 9.5%, 52.4%, 33.3% and 4.8% respectively.
