Tuberculosis	97			337			

^{*} Provisional figures

[#] Added to the list of notifiable diseases as of 30 Jun 2022. The fourth case of Mpox clade 1b infection was detected in E-week 20 2026. All other cases were clade 1b infections.

[^] With effect from E-week 27, 2023, only confirmed cases of MERS will be reported, instead of the number of persons tested.

** With effect from January 2026, national-level STI data will be reported.

Acute Respiratory Infection (ARI) Situation in Singapore 2026

ARI indicators for E-week 20 (17 - 23 May 2026) were as follows:

The average daily number of patients seeking treatment in the polyclinics for ARI was 2973 (over 5.5 working days) in E-week 20.

In E-week 20, the top respiratory pathogens among adult and paediatric samples from the National Surveillance Programme for Acute Respiratory Infection[§] (ARI) were:

- Adult samples: SARS-CoV-2 (21%), Human rhinovirus/enterovirus (15%), and influenza (10%).
- Paediatric samples: Human rhinovirus/enterovirus (33%), parainfluenza viruses (15%) and SARS-CoV-2 (10%).

[§] CDA monitors the trends of respiratory pathogens in the community through our sentinel surveillance programme for Acute Respiratory Infections (ARI) which includes polyclinics and selected general practitioner (GP) clinics.

COVID-19 and Influenza

The positivity rate for influenza among ILI samples (n= 162) in the community was 15% in E-week 20. The positivity rate for COVID-19 among ARI samples (n= 293) in the community was 18% in E-week 20.

Of the 21 specimens tested positive for influenza in April 2026, three were positive for influenza A(pH1N1) (14.3%), four were positive for influenza A(H3N2) (19.0%), and 14 were positive for influenza B (66.7%).

Monthly Influenza Surveillance

Based on influenza-like illness (ILI) samples from GPs and polyclinics

No. of Cases

Acute Hepatitis A

No. of Cases

Cholera

WEEKLY INCIDENCE OF VECTOR-BORNE DISEASES, 2025-2026

The number of dengue notifications was 53 in E-week 20.

The number of hospital admissions increased to 6 in E-week 20, compared to 5 in E-week 19.

Preliminary results of all positive dengue samples serotyped in May 2026 showed DEN-1, DEN-2, DEN-3 and DEN-4 at 10.8%, 40.5%, 45.9% and 2.7% respectively.
