

SINGAPORE'S DRUG PREVENTION APPROACH

Singapore takes a prevention-first approach to drug control, focusing on stopping drug abuse before it becomes widespread.

Three Pillars of our Drug Control Strategy

Tough Laws and Rigorous Enforcement

Deter drug trafficking, disrupt drug supply and help keep the drug situation under control.

Evidence-informed Rehabilitation

Supports individuals through rehabilitation and reintegration, helping them remain drug-free.

Preventive Drug Education

Builds awareness of the harms of drugs, strengthens youths' resilience against drug abuse and reinforces support for a drug-free Singapore.

Why Harm Prevention?

Singapore's low drug prevalence makes harm prevention a suitable core strategy.

Through the 3 pillars, Singapore seeks to prevent drug abuse and stop drug problems from becoming widespread.

Prevention across the Life Course

Singapore's preventive drug education reaches individuals at key stages of their lives.

Prenatal and Parental

Early parental engagement and prevention messaging

National Service (NS)

Timely information and support throughout the NS journey

Community

Public awareness and community engagement

Schools

(From Primary to Tertiary)
Age-appropriate education and support

Family

Support for families to reinforce drug-free values
