TCPR LINK STUDY NEWSLETTER

ENROLLMENT PROGRESS

1046 MYRESPONDERS AS OF JAN 2026

100 EMERGENCY USE CASES

25 **FULL SYSTEM USE** (CPRCARD+TCPR LINK APP)

MORE SLOTS ARE OPEN

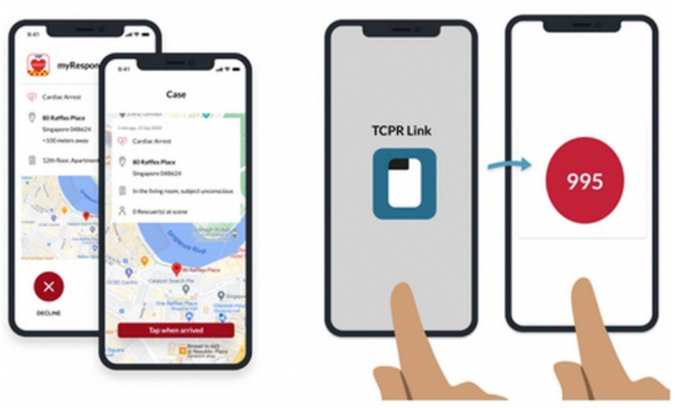

HELP SPREAD THE WORD TO YOUR FAMILY & FRIENDS

SCAN THE QR CODE TO REGISTER

WHO CAN SIGN UP?

1. AGE 13-74 (PARENTAL CONSENT FOR UNDER 21)
2. REGISTERED MYRESPONDER
3. TRAINED IN CPR+AED (CERTIFICATION PREFERRED BUT NOT NECESSARY)

KEY MILESTONES & UPCOMING PLANS

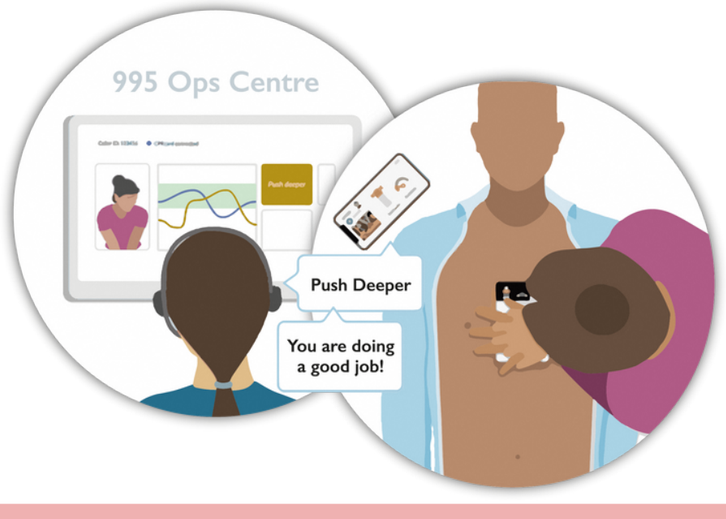

2024

- High fidelity simulation with 6 of our study participants in February.
- On demand information session video replaced in-person attendance in May.
- Randomization of clinical cases to either “Control” or “Intervention” in August.
- Enhanced TCPR Link Web for our TCPR Link dispatch nurses in November.
- Publication of TCPR Link Methods paper at Resuscitation Plus in December.
- TCPR Link app was updated to 8.1.9 version in December.

- Soft launched in May and approval of remote consenting.
- Released of myResponder app 2.0 in July.
- First emergency use of Gen 2 CPRcard in August.
- Established linkage between TCPR Link SG and myResponder apps in September.
- First successful emergency use case of full TCPR Link system in October.
- Achieved enrolment of 300 myResponders by end of December.

2025

2026

- Planning for a closed symposium for our study participants and dispatch nurses.
- Planning for simulation practice sessions for our study participants.

CONFIDENCE UNDER PRESSURE: A PARTICIPANT'S EXPERIENCE

For Larry Han (LH), pressure isn't unfamiliar — neither is stepping forward when it matters most. A dedicated myResponder since April 2015, Larry has responded to 75 cardiac arrest cases over the years. Experience has taught him that no two emergencies are ever the same, but one thing remains constant: when the moment comes, confidence can make all the difference.

Larry's journey with the study began in 2017, when he participated in Phase I using CPRcard Gen 1. Fast forward to 2024, he continued as part of the TCPR Link study with CPRcard Gen 2. When an actual emergency unfolded, the tools he had trained with were no longer part of a study — they became trusted companions, offering clear guidance and timely reassurance under intense pressure.

Reflecting on the experience, Larry describes how TCPR Link and the CPRcard supported his response without distracting from it. Instead, they reinforced what he already knew, helping him stay focused, calm, and decisive. His story is a reminder that confidence isn't just built through experience alone — it's strengthened by preparation, practice, and the right support when every second counts.

What motivated you to join the study, and how did you feel learning about its purpose?
LH: I am thankful for the invitation to join the study. I was motivated by its purpose, as the CPRcard provides guidance on compression quality through the two green lights, especially situations where there is no AED.

Can you share your experience responding to a cardiac arrest case using the study intervention?
LH: The two green lights on the CPRcard helped me maintain consistent compression momentum throughout the response. When the SCDF EMT asked me to continue CPR, I was able to confidently do so using it.

Are there anything you think could further support responders like yourself?
LH: Greater acceptance of the CPRcard among responders, EMTs, and paramedics would further support responders like myself.

How has participating in the study changed your confidence or mindset in emergency situations?
LH: Participating in the study increased my confidence in emergency situations. Hearing the Laerdal team from Norway share their insights was rewarding and reassuring, and it strengthened my belief in the importance of being prepared and using effective tools when responding to emergencies.

What would you like to share with other study participants who have yet to use the CPRcard and/or TCPR Link system in their response?
LH: I encourage other participants to use the CPRcard when the opportunity arises. The two green lights are very helpful and quickly show how useful the device is in guiding compression quality during a response.

HAPPY LUNAR NEW YEAR

2026

May this Year of the Horse brings you luck, joy, and memorable moments.

Wishing our Muslim friends

Ramadhan Kareem

May this month be a time of renewal and spiritual growth for you.
