

# Project Proposal Template

*Insert cover page (e.g artist impression of the development as the background, name of the development, project team logos, etc.)*

# Executive Summary

---

*Insert info on the project including: -*

- *Project Name/Name of Development*
- *Project Description/Development Address*
- *Development Type*
- *BP Ref No. (if any)*
- *PP/WP Ref No. (if any)*
- *Site area*
- *GFA / CFA*
- *Project Commencement and Completion Date*
- *Projected TOP*
- *Project Team: -*
  - *Developer/Building Owner*
  - *Design Architect*
  - *Consultants*
  - *Main Contractor*
  - *Technical Support*
- *Contract Sum*
- *Individual cost premiums for DfMA, SLE, and IDD*

# Site Layout Plans & Other Drawings

# Integrated Digital Delivery Implementation Strategy

# Summary of IDD use cases for implementation

*Insert summary of IDD use cases\* for implementation across different project stage. The following is an illustration for reference. \*Adoption of 5 or more of the 14 IDD essential use cases in 4 stages of the project lifecycle for non-residential and 3 stages for residential developments are required under the BE ITM Bonus GFA Incentive Scheme. Please refer to the IDD Annex for definition.*

S/N	IDD Use Cases and Innovations	Digital Design	Digital Fabrication	Digital Construction	Digital Asset Delivery & Management
1	Digital Request for Information (RFI)	•	•	•	
2	Integrated Concurrent Engineering (ICE) meetings	•	•	•	
3	Visualisation and design checks	•	•	•	
4	Digital submission & approval	•	•	•	
5	BIM-based documentation	•	•	•	
6	BIM-based cost estimation	•	•	•	
7	Digital logistics		•	•	
8	Digital construction scheduling and sequencing		•	•	
9	Digital progress monitoring		•	•	
10	Digital QA/QC inspections		•	•	
11	Digital defects management		•	•	•
12	Digital handover			•	•
13	Real-time monitoring of assets performance				•
14	Digital operations and maintenance				•

# Summary of IDD implementation

*The following is an illustration for reference.*

*[List down at least 5 IDD use cases throughout the project stages, key processes for streamlining with help of digital solutions, and measurable benefits.]*

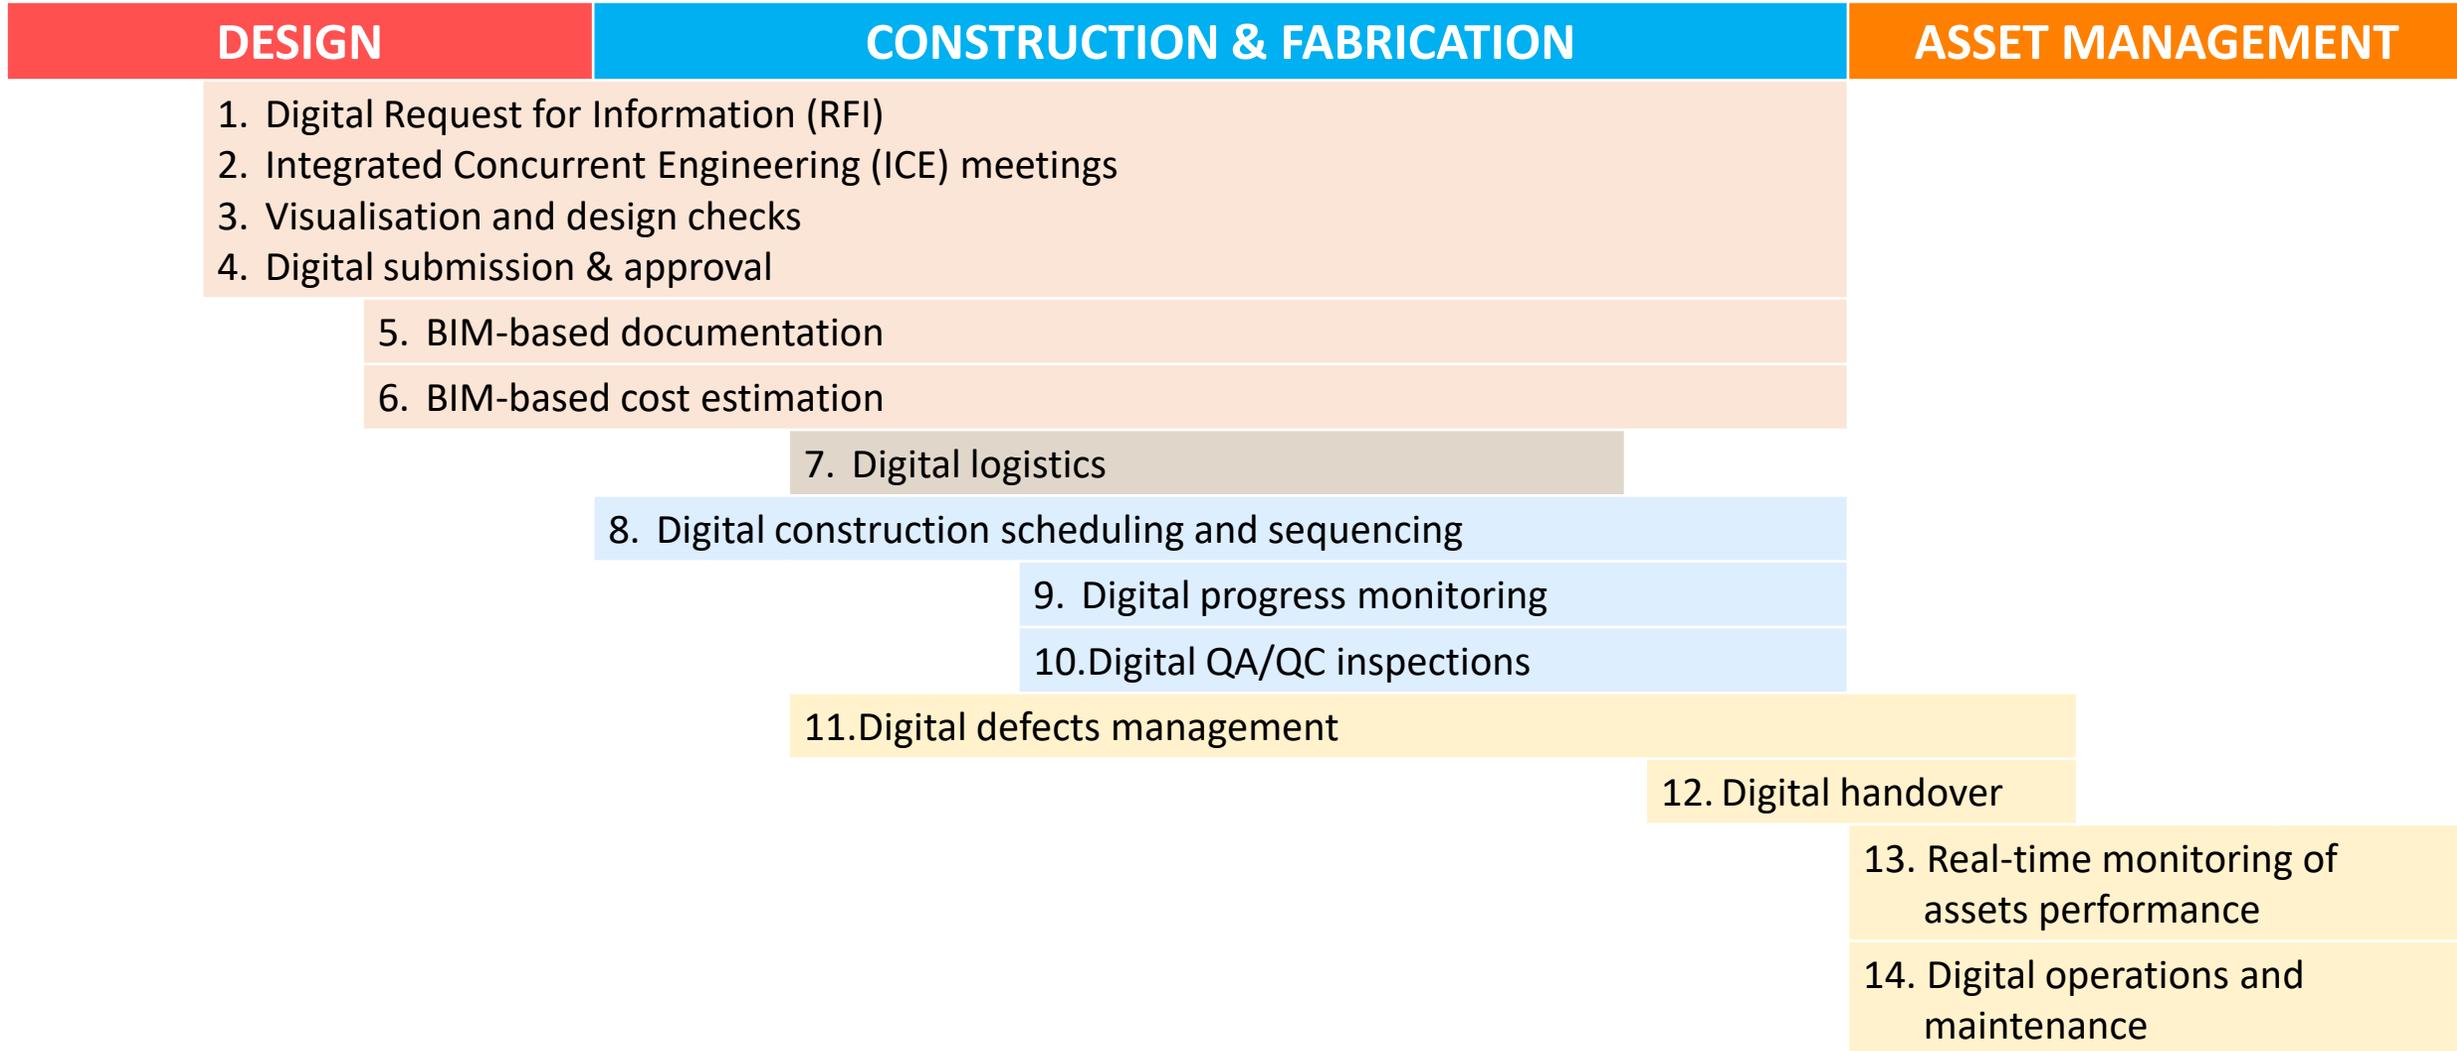

KEY USE CASE	CURRENT PROCESS (CHALLENGES)	TO-BE PROCESS	DIGITAL SOLUTION/PLATFORM	QUANTIFIABLE BENEFITS	WAY OF MEASUREMENT	ISSUES FACED IN IMPLEMENTATION*	LEARNING POINTS*
<b>example</b> 1. Digital QA/QC inspections	1) Paper-based inspection forms 2) Manual data collection 3) Delay corrective actions	1) reduce paper work & auto-archive inspection records 2) real-time data collection 3)early corrective/preventive actions	digital solution of ABC	% reduction of time spent for inspection approval	Manhours used for preparation and communications of inspections before and after	The platform is not easy to customize the checklist forms  <i>*May not be applicable to kick-start project. Can elaborate in the progress and/or final report.</i>	Standardize and streamline the checklists before digitalising

# IDD ANNEX

# IDD Essential Digital Use Cases

<For Info >

- Common adopted use cases focus on Design Construction, Fabrication and FM stages

# IDD Essential Digital Use Cases

<For Info >

## Essential Digital Use Cases across at least 3 project stages for IDD Scope

DIGITAL USE CASE	DEFINITION	DIGITAL DELIVERABLES
1. Digital Request for Information (RFI)	Raise, communicate and track issues through digital means to facilitate resolution	<ul style="list-style-type: none"> <li>• Issues and resolution dashboards</li> <li>• Digital notes of discussion</li> <li>• Updated BIM models</li> </ul>
2. Integrated Concurrent Engineering (ICE) meetings	Conduct meetings (technical, review, coordination etc.) with the relevant project team members in a collaborative way and enabled by digital technologies and BIM	<ul style="list-style-type: none"> <li>• Digital records of decision (e.g. federated models), actions to be taken and party responsible</li> </ul>
3. Visualisation and design checks	Utilise BIM models or other digital 3D models or immersive technologies e.g. Augmented Reality (AR) <sup>1</sup> / Virtual Reality (VR) <sup>2</sup> / Mixed Reality (MR) <sup>3</sup> to seek feedback and validate design aspects, space requirements and other settings such as buildability and constructability	<ul style="list-style-type: none"> <li>• BIM models or other digital 3D models (can be further processed according to project needs)</li> <li>• Rendered models</li> </ul>
4. Digital submission & approval	Submit deliverables required by various stakeholders for decision through digital means	<ul style="list-style-type: none"> <li>• Information required for tracking</li> <li>• Decision records</li> </ul>
5. BIM-based documentation	Prepare documents based on information primarily generated from BIM models	<ul style="list-style-type: none"> <li>• BIM models</li> <li>• Drawings</li> <li>• Tender specifications</li> </ul>

<sup>1</sup> Augmented Reality (AR) – Technology that allows users to see and interact with the real world with the virtual objects being overlaid in a real-world environment.

<sup>2</sup> Virtual Reality (VR) – Technology that immerses users in a completely virtual environment that is generated by a computer.

<sup>3</sup> Mixed Reality (MR) – Technology that combines virtual environment with the real-world and allows users to interact with both the real world and the virtual environment.

# IDD Essential Digital Use Cases

<For Info >

DIGITAL USE CASE	DEFINITION	DIGITAL DELIVERABLES
6. BIM-based cost estimation	Estimate costs at various project stages based on available information from BIM models	<ul style="list-style-type: none"> <li>• Costing models</li> <li>• Costing and quantity-take-off documentation</li> </ul>
7. Digital logistics	Plan prefabrication production schedule, and track and monitor the production, delivery and installation of the prefab components digitally	<ul style="list-style-type: none"> <li>• Production schedule</li> <li>• Digital logistic delivery records</li> <li>• Simulations of logistic paths and conditions (optional)</li> </ul>
8. Digital construction scheduling and sequencing	Plan and monitor construction activities using digital construction scheduling, simulation and sequencing	<ul style="list-style-type: none"> <li>• 4D time-based construction schedules, simulations or sequencing models</li> </ul>
9. Digital progress monitoring	Monitor site progress using digital solutions/scanning and update schedules and 3D models for progress reports and payments	<ul style="list-style-type: none"> <li>• Records of site progress photos, updates to schedules and 3D models; or</li> <li>• Progress reports (actual vs planned; current month vs previous month)</li> </ul>
10. Digital QA/QC inspections	Record observations and track follow-ups using digital solutions	<ul style="list-style-type: none"> <li>• Records of QA/QC site inspections;</li> <li>• Audit trails of resolution/approvals</li> </ul>
11. Digital defects management	Manage and track defects and rectification using digital checklists and dashboards	<ul style="list-style-type: none"> <li>• Master defects list</li> <li>• Digital defects location record</li> <li>• Defects rectification reports</li> </ul>

# IDD FM Use Cases

<For Info >

DIGITAL USE CASE	DEFINITION	DIGITAL DELIVERABLES
12. Digital handover	Generate digital asset information of the built physical assets and hand over as-built records, manufacturers' specifications and warranties and O&M manuals digitally	<ul style="list-style-type: none"><li>• 3D asset models with assets information</li><li>• As-built records</li><li>• Manufacturers' specifications and warranties</li><li>• O&amp;M manuals</li></ul>
13. Real-time monitoring of assets performance	Track key operating parameters of assets such as utilisation, downtime, availability etc. real-time	<ul style="list-style-type: none"><li>• Digital operating data</li><li>• Object/system centric FM data collection</li></ul>
14. Digital operations and maintenance	Perform operations and maintenance of assets and facilities using digital platforms integrated with technologies such as IoT, sensors, data analytics etc.	<ul style="list-style-type: none"><li>• Digital maintenance records</li><li>• Digital records of work orders</li><li>• Audit trails of resolution/follow-ups</li></ul>

# Green Building Concept Plan

# Summary

---

Insert summary on how the project will meet the  $\geq 60\%$  Energy Savings and 40 points required to attain GM Platinum (SLE) rating under the GM:2021 criteria

Useful Resources:

[GM: 2021 Criteria](#)

[GM SLE Criteria](#)

# Energy Efficiency

---

Insert info on EE features to be adopted for the project to meet the EE requirements based under the intended EE pathway. EE is a prerequisite in GM:2021

Refer to the [Energy Efficiency Section Document](#) for details on the requirement.

Note: all technical guides can also be found on the [GM:2021 webpage](#)

# Intelligence

---

Insert info on GM points the project is targeting to score, if any

Refer to the [Intelligence Section Document](#) for details on the requirement

Note: all technical guides can also be found on the [GM:2021 webpage](#)

Insert info on GM points the project is targeting to score, if any

Refer to the [Health & Well Being Section Document](#) for details on the requirement

Note: all technical guides can also be found on the [GM:2021 webpage](#)

# Whole Life Carbon

---

Insert info on GM points the project is targeting to score, if any

Refer to the [Whole Life Carbon Section Document](#) for details on the requirement

Note: all technical guides can also be found on the [GM:2021 webpage](#)

# Maintainability

---

Insert info on GM points the project is targeting to score. A minimum of 10 out of the 15 available points is required under the BE ITM Bonus GFA Incentive Scheme

Refer to the [Maintainability Section Document](#) for details on the requirement

Note: all technical guides can also be found on the [GM:2021 webpage](#)

# Resilience

---

Insert info on GM points the project is targeting to score, if any

Refer to the [Resilience Section Document](#) for details on the requirement

Note: all technical guides can also be found on the [GM:2021 webpage](#)

# Progress Report on Green Mark for Sustainability Outcome

---

Insert the following information:

- Progress on GM application (e.g. updates on whether the team applied for GM and been assigned a GM assessor)
- Progress on GM assessment, tentative deadline to complete GM assessment and attain GM Letter of Award
- Progress on GM verification, tentative deadline to complete GM verification and attain GM Letter of Completion

# Productivity Implementation Plan

# Summary

---

Insert summary on overall construction productivity concept including, but not limited to:

- DfMA technologies to be adopted (e.g. Prefabricated Prefinished Volumetric Construction (PPVC), Prefabricated Mechanical Electrical and Plumbing (MEP) System, etc.)
- Specific DfMA technology (e.g. PPVC, Structural Steel) coverage or expected productivity improvement achievable (e.g. 30%)
- Other productive construction technologies and methodologies adopted

# DfMA Concept

---

Insert information on Productivity

Implementation Plan including, but not limited to the following details:

- Overall DfMA concept for the project
- Overall site / block plans that demonstrates how the project optimizes the use of DfMA through the design (e.g. through high repeats of modules, standardization of components etc.)

# Architectural System

---

Insert information on Productivity

Implementation Plan including, but not limited to the following details:

- Typical block plans highlighting location where DfMA technologies are adopted
- Demonstrate design modularization and integration
- Demonstrate the coverage of DfMA technology / prefabrication level
- Demonstrate the productivity improvement achievable
- Demonstrate the level of prefabrication

# Structural System

---

Insert information on Productivity

Implementation Plan including, but not limited to the following details:

- Typical block plans highlighting location where DfMA technologies are adopted
- Demonstrate design modularization and integration
- Demonstrate the coverage of DfMA technology / prefabrication level
- Demonstrate the productivity improvement achievable
- Demonstrate the level of prefabrication

# MEP System

---

Insert information on Productivity

Implementation Plan including, but not limited to the following details:

- Typical block plans highlighting location where DfMA technologies are adopted
- Demonstrate design modularization and integration
- Demonstrate the coverage of DfMA technology / prefabrication level
- Demonstrate the productivity improvement achievable
- Demonstrate the level of prefabrication

# Others

---

Insert information on Productivity

Implementation Plan including, but not limited to the following details:

- Highlight any other innovative / productive technologies used
- Highlighting location on plan (if applicable)
- Demonstrate the coverage (if applicable)
- Demonstrate the productivity improvement achievable
- Demonstrate the level of prefabrication
