AECOM Health and Safety
Plan

APPENDIX A:

HEALTH AND SAFETY PLAN

Environmental Baseline Survey (EBS) and Environmental Impact
Assessment (EIA) for the Former Turf Club at Bukit Timah

Prepared by:

AECOM Singapore Pte Ltd
300 Beach Road, #23-00 The Concourse,
Singapore 199555

Project Number: **60704787**

HEALTH AND SAFETY PLAN

APPROVAL PAGE

This project Health and Safety Plan (HASP) was prepared for employees performing a specific, limited scope of work. It was prepared based on the best available information regarding the chemical, physical and biological hazards known or suspected to be present on the project site. While it is not possible to discover, evaluate, and protect in advance against all possible hazards, which may be encountered during the completion of the projects, adherence to the requirements of the HASP will significantly reduce the potential for occupational injury.

By signing below, I acknowledge that I have reviewed and hereby approve this HASP. This HASP has been written for the exclusive use of AECOM, its employees, and subcontractors. The plan is written for specified site conditions, dates and personnel, and must be amended if these conditions change.

- Attachment B – Emergency Response Information

1.0 Introduction

This Health and Safety Plan (HASP) was developed by AECOM's Environment Business Line (AECOM) for implementing the Environmental Baseline Survey (EBS) and Environmental Impact Assessment (EIA) for the Former Turf Club at Bukit Timah. This establishes the health and safety procedures required to minimize potential risk to personnel for the duration of the activity. This is a project and site-specific HASP and should be used concurrently with the AECOM Field SH&E Manual and standard operating procedures (SOPs) and a completed site-specific Emergency Response Information Form (Attachment B).

1.1 Policy

AECOM, as a leading global provider of environmental, health and safety services, is committed in protecting the safety and health of our employees and meeting our obligations with respect to the protection of others affected by the implementation of all our operations. We are also committed to protecting and preserving the natural environment in which we operate. The safety of persons and property is of vital importance to the success of this project and accident prevention measures shall be taken toward the avoidance of needless waste and loss. It shall be the policy of this project that all operations be conducted safely as stated in *AECOM SH&E Policy Statement*.

1.2 Scope and Application

The provisions of this HASP apply to all AECOM project staff who may potentially be exposed to safety and/or health hazards related to activities described in Section 3.0 of this document. Unanticipated site-specific conditions or situations may occur during the implementation of this project. Also, AECOM and/or the contractors may elect to perform certain tasks in a manner that is different from what was originally intended due to a change in field conditions. As such, this HASP must be considered a *working document* that is subject to change to meet the needs of this project.

1.3 Regulatory Compliance

All activities covered by this HASP must be conducted in complete compliance with this HASP and with all applicable environmental, health and safety regulations of Singapore. Additionally, all work will be conducted in accordance with AECOM SH&E Policies and Procedures found in the *AECOM Field SH&E Manual* and Singapore Occupational Safety and Health Administration (OSHA) framework. Personnel covered by this HASP who cannot or will not comply with any of these requirements will be excluded from site activities.

1.4 Management of Change

The procedures in this HASP have been developed based on current knowledge regarding the specific biological and physical hazards, which are known or anticipated for the proposed onsite baseline survey. Site specific requirements and hazards for this project will be taken into consideration and will be included in any update of this HASP. Should additional information become available regarding unique site hazards or operational change, it may be necessary to modify this HASP. All proposed modifications to this HASP must be reviewed and approved by the AECOM Project Manager (PM) and HSSE Focal before such modifications are implemented. The Receipt and Acceptance Sign-off sheet must be submitted to the AECOM PM. The HASP Receipt and Acceptance Sign-off Sheet are included in this HASP as Attachment A.

1.5 Health and Safety Organization

The implementation of health and safety at the site location will be the shared responsibility of the Project Manager (PM), the Project Field Surveyors (FS), the HSSE Focal (HSSEF), and other site-based personnel and contractors implementing the proposed scope of work. The responsibilities of the PM, FS and HSSEF are shown in detail in the *AECOM SH&E Field Manual*. For the implementation of this project, the following Health and Safety Organizational Chart will apply:

1.5.1 Project Director

The Project Director is the lead of the entire AECOM working team and is also serving as the advisor for the Project Manager in terms of site work arrangement, health and safety and budgetary resources. In this Project, the Project Director is one of the technical leads in reviewing the EIA report(s) before external submission to the Client.

1.5.2 Project Manager

The Project Manager (PM) has overall management authority and responsibility for the project, including safety. The PM will provide the FS with work plans, safety personnel, and budgetary resources, which are appropriate to meet the safety needs of the project operations. Helping the PM with the management of the project is the Deputy Project Manager (DPM).

1.5.3 AECOM Field Surveyors/Staff

The AECOM Field Surveyor (FS) has the overall responsibility and authority to complete the work according to the provided scope of work. The FS must verify that all tasks are in compliance with the requirements of this HASP, and halt any activity that poses a potential hazard to personnel, property, or the environment.

1.5.4 Subcontractors

Subcontractors (in red box) involved in this project should review and understand the contents of this HASP prior to the start of on-site work. However, as part of the contract with the subcontractors, they are expected to follow their internal health and safety protocols. The subcontractor shall be fully responsible and shall indemnify AECOM for any losses, liabilities and claims as stipulated in Clause 9 and Clause 13 of the signed Subconsultant Engagement. Moreover, the subcontractors are expected to maintain proper and adequate insurances to cover health and safety related emergencies.

1.5.5 Other Field Personnel

All other field personnel covered by this HASP are responsible for following the health and safety procedures specified in this HASP and for performing their work in a safe and responsible manner.

1.6 Stop Work Authority

AECOM Stop Work Procedures (S3AS-106-PR) grants all AECOM employees, including employees of any of its subcontractors the right and responsibility to exercise a 'Stop Work Authority' any time that an employee identifies a discrepancy, deficiency, or potentially dangerous condition or act that is likely to cause an unsafe or unhealthy situation. Any time a 'Stop Work Authority' is issued at the site, work must immediately cease and all involved employees should review that task and the appropriate JSRA to ensure that any hazards are recognized by all concerned workers. The **Behaviour Based Safety** (BBS) process enables each worker to evaluate safe and at-risk working behaviours and conditions and then identify appropriate safe working behaviours and procedures through the process of positive feedback.

2.0 Project Background and Scope of Work

2.1 Project Background

AECOM Singapore Pte Ltd was appointed by the Urban Redevelopment Authority (URA) of Singapore to carry out a Environmental Baseline Survey (EBS) and Environmental Impact Assessment (EIA) for the Former Turf Club at Bukit Timah (hereafter collectively referred to as 'Project Site' or "Study Area"). Based on URA's proposed preliminary land use plan, the Project Site is proposed as residential development with transport infrastructure (e.g. existing MRT Downtown Line/ future Cross Region Line etc.) and supporting amenities.

The Project Site is bounded by Pan Island Expressway, Eng Neo Avenue and Dunearn Road. Nearby in the north are Bukit Timah Nature Reserve and Central Catchment Nature Reserve, which are important ecological sites in Singapore. Located at former Turf Club built in 1933, the Project Site used to consist of greenfield areas and the racecourse. It was then used as a recreational and lifestyle hub since the Turf Club relocation in 1999, and the eastern half of the area regenerated into a forest. The forest may serve as ecological corridors to the nature reserves in the north, which makes the Project Site ecologically valuable. As such, the Study Area for the proposed development includes the forested patch to the south and north of the Project Site, and the total Study Area is approximated to be 195 hectares (ha), and is divided into seven (7) smaller sites A to F. The boundary of the Study Area and Project Site is shown below in **Figure 1**.

Figure 1 Project Site and Study Area

2.2 Scope of Work

To assess the impacts of the proposed developments, URA would like to conduct an Environmental Impact Assessment (EIA) on the study area. This includes assessing the nature and existing baseline of the Study Area through an Environmental Baseline Survey (EBS). The scope of the field work for the project is composed of the following items:

2.2.1 Biodiversity Study

This study will include biodiversity baseline studies which will comprise of habitat mapping, listing of floral and fauna species present with a focus on those that are threatened and/or are of high conservation value, have significant ecological functions such as keystone species, and/or are of public interest. The EIA will assess the impacts on flora and fauna communities and/or ecological processes due to risk of pollution to aquatic habitats and noise pollution from the construction and operational phase of the project. Areas of high conservation value and buffer zones will be identified. Baseline results will inform assessment of impacts, allow appropriate mitigation measures (if warranted) and recommendations for environmental management and monitoring plan (EMMP) will be proposed.

2.2.2 Hydrology and Water Quality

This study will identify the existing major streams and watercourses within the Project Site and investigate the characteristics of the identified streams including bank types (e.g. natural bank or artificial bank), stream length and depth, channel wetted width, stream bed substrate, estimated flow velocity during wet and dry weathers. Hydrological analysis will be conducted to identify surface water sources and sub-catchment areas that contribute to the major watercourses in the site. Impacts that are related to the stream watercourses alignment, potential runoff and water pollution will be identified for the construction and operational phase. In addition, surface water quality sampling will be conducted to establish the baseline conditions in the identified watercourses. Potential impacts that are related to possible construction activities will be identified, and contaminant concentrations will be compared to relevant water quality criteria.

2.2.3 Soil and Groundwater Quality

A soil and groundwater assessment will be carried out to determine the soil depth, soil type, and groundwater level of the study area. The baseline data will be used for further soil and groundwater impact assessment, together with the use of relevant information generated from hydrological analysis. groundwater level will be compared to water levels in the nearby waterbody to assess the degree of dependency of watercourse flow from the groundwater. The baseline data will be used for further groundwater impact assessment, together with the use of relevant information generated from hydrological analysis.

2.2.4 Airborne Noise

The baseline noise monitoring will be carried out to establish the baseline noise levels. This study will assess the potential impact from noise generated qualitatively or quantitatively during construction phase, and qualitatively during the operational phase, to the neighbouring sensitive receptors.

2.2.5 Air Quality

A dust baseline survey will also be conducted to evaluate ambient dust (PM_{2.5} and PM₁₀) and a qualitative method will be used to analyse the dust impacts for construction and operational phase. The impacts from dust generated during the construction phase on the nearest sensitive receptors will then be assessed.

2.2.6 Topography Survey

Topographic survey will be conducted to gather data about the elevation of points within the Study Area and present them as contour lines on a plot. The purpose of a topographic survey is to collect survey data about the natural and man-made features of the land, as well as its elevations. A survey map of terrain and levels within the Study Area will be provided.

3.0 Hazard Assessment

3.1 Remote Site Work

Lone work is not permitted in remote areas, minimum two person teams are required. Prior to conducting activities in remote areas, the Project Manager, in consultation with the field staff, must develop a functional communication system consisting of devices and protocols.

For the communication devices, consideration may be given to the type of equipment required and the suitability of the equipment for the proposed works location. Where necessary, external expert advice on communication devices must be sourced. Communication equipment that may be considered for remote work includes wide-ranging network coverage mobile phones, satellite/GPS communication devices, or personal locator beacons.

The Project Manager must ensure a Communication Plan is developed for the remote works. The plan should outline the time and frequency of check-in, contact numbers for field staff and nominated check-in persons, contact numbers for alternative contacts, and escalation procedures for failed or missed check-ins.

The Project Manager must ensure appropriate resourcing, accommodation; equipment and transport are sourced prior to commencement of the works.

Field Staff are required to have an adequately stocked first aid kit with them for the duration of the works.

3.2 Physical Hazards

AECOM recognizes that performing certain tasks related to executing the scope of work for the site would expose workers to a variety of physical hazards. As such, AECOM employees have been trained and mentored to carry out assessment activities following AECOM standard operating procedures (SOPs) making SH&E a priority in their operations.

3.2.1 Falling Objects

Suspended loads or falling objects may be present at the site in the form of tree branches, old logs, collapsing remnants of old structures and other aboveground objects (e.g., suspended loads in a construction site within the site). The field staff must initially assess the site for presence of falling object(s), and the work must be conducted away from locations that may be directly impacted by such. Pathways should be planned and selected such that they are away from potential falling loads and/or suspended objects. For works within construction sites, the field staff must comply to the construction developer's health and safety procedures and as a minimum should wear a hardhat and safety shoes.

3.2.2 Slip, Trip and Fall Hazards

On any work area, it is expected that the ground may be uneven. The ground surface may be unreliable due to settling. The site should be initially assessed for potential slip, trip and fall hazards. Identify excavations, open pits, holes, and trenches then place appropriate markers at locations with these hazards. Establish and follow an unobstructed walking path identified when working due to the irregular terrain.

3.2.3 Pinch Points

The use of hand tools, mechanical equipment can create pinch points within the working area. Pinch points can be recognized when moving objects are present in the work space in close proximity to employees, and it is reasonable to assume that a part of the employee's body can be caught between the moving objects. Pinch points will be considered when performing a JSRA for the task being performed and recommendations will be made to reduce the potential for body parts to become caught in moving parts, including but not limited to:

- When tools are used as an extension of the body consideration will be given to how the tool may become a hazard if it is caught within moving parts; and
- The use of PPE, e.g. gloves, boots, etc., to protect exposed body parts.

3.2.4 Manual Lifting

Most materials associated with construction-related activities are moved by hand. The human body is subject to severe damage in the forms of back injury, muscle strains, and hernia if caution is not observed in the handling process. Whenever possible, use at least two people to lift, or roll/lift with your arms as close to the body as possible. Under no circumstances should any one person lift more than 12 kgs unassisted. Using the proper techniques to lift and move heavy pieces of equipment is important to reduce the potential for back injury. Use mechanical devices to move objects that are too heavy to be moved manually. If mechanical devices are not available, ask another person to assist you. Bend at the knees and not the waist when lifting loads. Let your legs do the lifting and do not twist your body while lifting. Be sure the path you are taking while carrying a heavy object is free of obstructions and slip, trip and fall hazards.

3.2.5 Cuts and Lacerations

Field personnel should always look for sharp surfaces such as glass when handling sampling bottles, soil samples or debris. Always wear cut/puncture resistant gloves when hand-clearing cannot be avoided. Never attempt to remove objects caught in an auger stem with the hand and make sure the equipment is turned off.

3.3 Weather Hazards

3.3.1 Heat Stress

Heat stress related problems include **heat rash, fainting, heat cramps, heat exhaustion and heat stroke**. Increased body temperature and physical discomfort also promote irritability and a decreased attention to the performance of hazardous tasks. The surveyors should establish work-rest cycles (short and frequent are more beneficial than long and seldom) and rest in a shaded, cool area.

Most workers exposed to hot environments drink less fluid than needed because of an insufficient thirst. **DO NOT DEPEND ON THIRST TO SIGNAL WHEN AND HOW MUCH TO DRINK. During field work, drink at least 4 - 6 litres (120 - 200 ounces) of fluids for an 8-hour workday.** Sufficient potable water and approved beverages should be made available each day for the field team. The field surveyors should also identify the most effective technique for heat stress monitoring.

3.3.2 Sun Exposure

Field personnel are encouraged to liberally apply sunscreen, with a minimum sun protection factor (SPF) of 30, when working outdoors to avoid sunburn and potential skin cancer, which is associated with excessive sun exposure to unprotected skin. Additionally, employees should consider wearing safety glasses that offer protection from UVA/UVB rays.

3.3.3 Darkness

AECOM discourages field activities to be done at low light conditions, particularly at night. When working in dark areas, ensure that additional artificial lighting must be present to illuminate the work area to ensure that paths and potential site hazards are clearly visible. The field personnel should also recognize the effect of fatigue on workers not accustomed to working at night or extended periods. If night works is required, approval from the PM/DPM,

and URA must be obtained prior to start of any night works. Moreover, a minimum of two personnel should be completing the work. Lone worker at night time is NOT allowed.

3.3.4 Haze

Haze can occur for some period of time in Singapore every year and the atmosphere could be filled with dust, some or other dry particulates such as fine suspended particles that obscure the clarity of sky. N95 mask should be worn if the haze will affect the work performance during field survey. If N95 masks are used, note that it will increase the effort of breathing. It may cause discomfort in breathing, tiredness or headache. Instituting regular breaks should be considered and drink more water to ensure enough hydration during field survey.

3.3.5 Inclement Weather and Other Natural Disasters

Severe weather can occur with little warning. Employees will be vigilant for the potential of storms, lightning, high winds, and flash flood events. The field personnel will be attentive to daily weather forecasts for the project area each morning. Predicted weather conditions of potential field impact should be considered when performing the work. No field surveys will be conducted during inclement weather, thunder or lightning in the vicinity of the study area.

Be alert to the signs of changing weather, such as darkening skies, a sudden wind shift or drop in temperature. If you are expected to be onsite, plan your evacuation and safety measures in advance. During thunderstorms, when you first see lightning or hear thunder, activate your emergency plan and go inside to the closest building or vehicle. In the event that the national weather service predicts that one of the areas where AECOM is working is in the direct path of a typhoon or cyclone, the PM will immediately contact the field personnel to determine what, if any, precautions are necessary, including the need for evacuation.

This same protocol will be followed in the event that other natural disasters (e.g., floods, landslides, earthquakes, etc.) could impact field personnel. DO NOT IGNORE INSTRUCTIONS TO GET TO SAFETY.

3.4 Biological Hazards

As the site is located in a secondary forest, biological hazards are expected to be present. The AECOM project team shall ensure that the potential for exposure to specific biological hazards are assessed prior to the commencement of work and that the procedures specified by this HASP are integrated into the project planning process and conveyed to AECOM employees conducting the field work. This information shall be communicated in the site kick-off meetings. Possible biological hazards that may be encountered at the site include mosquitoes, wild boars, spiders, bees, and snakes. Where detected, assessment of trees will only be carried out at a distance.

The hazard assessments must also consider the additional hazards posed by vegetative clearing such as the increased risk of coming in contact with plants that may cause irritation, cuts and punctures. Hazards associated with the use of tools and equipment to remove vegetation.

3.4.1 Spiders

Spiders can be found in derelict buildings, sheltered areas, basements, storage areas, well heads, and even on open ground. Spiders can be found year round in sheltered areas and are often present in well heads and valve boxes. Most spider bites produce wounds with localized inflammation and swelling. All spiders are poisonous, but fear of all spiders is unwarranted because most are either too small or possess poison that is too weak to harm humans. Only a few have bites that are dangerous to humans. However, the bite of these few species can cause serious medical problems and possible death under certain circumstances.

3.4.2 Mosquitoes

When a mosquito bites, it injects an enzyme that breaks down blood capillaries and acts as an anticoagulant. The enzymes induce an immune response in the host that results in itching and local inflammation. The tendency to scratch the bite sites can lead to secondary infections. CDC data indicates that mosquito-borne illnesses, including the strains of dengue, Zika, malaria and encephalitis, are a health risk to employees working in outdoor environments. Mosquitoes breed in stagnant water and typically only travel a quarter mile from their breeding site. Whenever possible, stagnant water should be drained to eliminate breeding areas. Project managers and client should be contacted to determine whether water can be drained and the most appropriate method for draining containers, containment areas, and other objects of standing water. Application of mosquito-repellent lotion is advised especially when working outdoors. Employees also need to consider

whether they are sensitive to the use of insect repellents. Priority should be given to elimination of breeding areas.

3.4.3 Bees and Hornets

Bees, hornets and wasps may be found in derelict buildings, sheltered areas, and even on open ground. Avoid reaching into areas where visibility is limited. If stung by a wasp or bee or hornet, notify a co-worker or someone who can help should you have an allergic reaction. Stay calm and treat the area with ice or cold water. Seek medical attention if you have any reactions to the sting such as developing a rash, excessive swelling or pain at the site of the bite or sting or any swelling or numbness beyond the site of the bite or sting.

Employees with known allergies to insect stings should consult their personal physician for advice on any immediate medications that they should carry with them. AECOM recommends that employees with known allergies inform their co-workers of the allergy and the location of the medications they might carry for the allergy.

3.4.4 Snakes

Most snake bites happen when the snake is trodden on, either in the dark or in undergrowth. If you find a snake while at work, contact local authorities which will arrange for a suitably qualified snake handler to catch and relocate the snake. DO NOT attempt to catch the snake yourself as this may result in serious injury. Simply track the snake's movements and await the arrival of the snake handler. Attention to the following recommendations might reduce the number of accidents.

- Know your local snakes, the sort of places where they like to live and hide, at what times of year, day/night or in what kinds of weather they are most likely to be active.
- Be especially vigilant about snake bites after rains, during flooding, at harvest time and at night.
- Wear proper shoes or boots and long trousers, especially when walking in the dark or in undergrowth.
- Avoid working in areas where snakes are suspected present or there is a history of their presence. Wear snake chaps if it is necessary to work in or near these areas.
- Avoid snakes as far as possible. Never handle, threaten or attack a snake and never intentionally trap or corner a snake in an enclosed space.
- Avoid or take great care handling dead snakes, or snakes that appear to be dead.
- Avoid having rubble, rubbish, termite mounds or domestic animals close to human dwellings, as all of these attract snakes.
- If you suspect that snake is present in close proximity to your work location, back off and request for help.
- Avoid work alone in remote sites – the buddy can serve as additional eyes for hazard identification and aide in times of emergency
- Prepare an emergency vehicle on standby for working in remote sites especially difficult in transportation (e.g. rent a car)

The hazard assessments must also consider the additional hazards posed by vegetative clearing such as the increased risk of coming in contact with plants that may cause irritation, cuts and punctures. Hazards associated with the use of tools and equipment to remove vegetation.

3.4.5 Wild Boars

There is potential dangerous of wild boar attack in forested areas, especially at the border of Bukit Timah Nature Reserve which is approximately 500m away from the former Turf Club at Bukit Timah. There are a few recommendations when encountered wild boar:

- Be calm and move slowly away from the wild boar.
- Do not approach or attempt to attack the wild boar.
- Keep a safe distance and do not corner or provoke the wild boar.

- If see adults with young piglets, leave them alone to avoid increase the alertness of the adult and they may attempt to defend their youngs.
- Wear proper shoes or boots and long trousers, especially when walking in the dark or in undergrowth.
- Avoid working in areas where wild boars are suspected present or there is a history of their presence.
- Avoid or take great care handling dead wild boar, or wild boar that appear to be dead.
- If you suspect that wild boar is present in close proximity to your work location, back off and request for help.

3.4.6 Stray Dogs and Other Wild Animals

Stray dogs and other wild animals may be present in the study area. Dogs have the tendency to attack once it demonstrates aggressive behaviour such as growling, crouching and barking. If an aggressive dog approaches, stand still with arms relaxed at the sides. Do not wave the arms or hands around as this can be seen as aggressive by the dog. Do not stare in the dog's eyes or meet it at eye level.

If employees get bitten or injured such as scratches or scrapes from the dog, proceed to the nearest medical centre (see Emergency Response section). The wounds should be treated and the necessary vaccines must be availed.

4.0 Personal Protective Equipment

4.1 Basic PPE

PPE will be worn during field work activities to meet the facility's basic PPE requirements and to prevent on-site personnel from being injured by the safety hazards posed by the site and/or the activities being performed. The following tables describe the basic PPE requirements for general site activities and for certain specific tasks/areas.

Basic PPE Item	Requirements for Donning Item
Long sleeved work jacket or shirt; 100% cotton	Required at all times. No torn or sleeveless shirts allowed
Long pants; denim or cotton	Required at all times. No short pants allowed.
Closed shoes/knee-high rubber boots/gaiters	Required at all times.
Hard Hat (ANSI Z89.1, Type 1, Class E)	Required when working in areas or activities with overhead hazards (i.e. operation of rig or working within a construction site)
Traffic vests (ANSI 107, Class II)	Required when working in areas with moving vehicles.
Work Gloves	Type required dependent on work performed. Brightly colored gloves are recommended.

4.2 Other Safety Equipment

The following additional safety items should be available at the site:

- Portable, hand-held eyewash bottles
- Fully-stocked first aid kit
- Hard barricades or traffic cones to designate work area;
- Multipurpose Dry Chemical (Type A-B-C) Fire (when hot works are implemented). The fire extinguisher should be accessible and placed close to the area where the Hot Work activities are occurring.
- Trekking pole/stick
- Face shield/mask

5.0 Personal & Travel Related Safety & Security

5.1 General Information

This project involves travel to an area of Singapore that may or may not pose security threats to the AECOM field team members that will perform the project work. All field personnel will use the buddy system when working within any controlled work area. Under no circumstances will any employee be present alone in a controlled area. To ensure the personal safety of AECOM staff, the following general precautions need to be considered and implemented:

- Obtain travel, health and security advisories applicable prior to mobilization. This includes notice to proceed from NParks, URA, SLA, ISD, MINDEF and SPF.
- Schedule onsite works during daylight hours or until nearby establishments are still open.
- Keep a mobile phone with you onsite. Maintain regular contact with someone in the office.
- To avoid being a target, dress conservatively. Do not wear expensive looking jewellery.
- Always try to travel light. You can move more quickly and with ease and will be more likely to have a free hand.
- If you wear glasses, pack an extra pair and pack medicines you need in your carry-on luggage.
- Notify a representative of the site/facility and your supervisor immediately if you become concerned at any time about your personal safety and security while conducting this work.

5.2 Communications

Throughout field surveys, a minimum of two personnel will work together at all times and carry hand phones to keep in contact with non-field personnel. Local telephone facilities or services may be limited at the site. Field teams must have a portable mobile phone to contact other AECOM Project Managers, and if necessary, local emergency responders.

6.0 Site Control

6.1 Housekeeping

During site activities, work areas will be continuously policed for identification of excess trash and unnecessary debris. Excess debris and trash will be collected and stored in an appropriate container (e.g., plastic trash bags, garbage can, roll-off bin) prior to disposal. At no time will debris or trash be intermingled with waste PPE or contaminated materials.

6.2 Smoking, Eating, or Drinking

Smoking, eating and drinking will not be permitted inside any controlled work area at any time. Field workers will first wash hands and face immediately after leaving controlled work areas (and always prior to eating or drinking). Consumption of alcoholic beverages is prohibited at any AECOM site.

6.3 Personal Hygiene

The following personal hygiene requirements will be observed:

- Water Supply: A water supply meeting the following requirements will be utilized:
 - ❖ Potable Water – An adequate supply of potable water will be available for field personnel consumption. Potable water can be provided in the form of water bottles, canteens, water coolers, or drinking fountains. Where drinking fountains are not available, individual-use cups will be provided as well as adequate disposal containers. Potable water containers will be properly identified in order to distinguish them from non-potable water sources.
 - ❖ Non-Potable Water – Non-potable water may be used for hand washing and cleaning activities. Non-potable water will not be used for drinking purposes. All containers of non-potable water will be marked with a label stating:

***Non-Potable Water
Not Intended for Drinking Water Consumption***

- Toilet Facilities: The FS shall identify the nearest toilet facilities.

7.0 Health and Safety Requirements

7.1 Training Requirements

7.1.1 Site Safety Officer Accreditation

All AECOM personnel performing activities covered by this HASP must have completed the appropriate prescribed internal training requirements.

7.2 SH&E Briefings and Meetings

7.2.1 Field Kick-off Meetings

Prior to the commencement of on-site activities, a field kick-off meeting will be conducted by the FS to review the specific requirements of this HASP. Attendance of the pre-entry meeting is mandatory for all personnel covered by this HASP and must be documented on the HASP Acceptance Form provided in Attachment A. All documentation should be maintained in the project file. The pre-entry briefing must be completed for each new employee before they begin work at the site.

7.3 Medical Surveillance Program

AECOM has a medical surveillance program in place specifically designed to provide pre-placement baseline medical examinations to determine the medical suitability of, and to establish a “medical baseline” for, newly hired employees. The program provides annual examinations to detect medical conditions or changes, which may affect medical suitability for unrestricted work; and also provides interim and post exposure examinations, as necessary, based on types of projects and materials handled.

7.4 Substance Abuse

AECOM understands that the unlawful or improper presence or use of controlled substances or alcohol in the workplace presents a danger to everyone. Employees who refuse to meet the requirements of the AECOM Substance Abuse Policy shall be removed from the project and may be subjected to disciplinary action, up to and including termination.

8.0 Emergency Response

AECOM response actions will be limited to evacuation and medical/first aid as described within this section. As such, this section of the HASP has been written to comply with 29CFR 1910.38 (a). AECOM employees and their subcontractors should be prepared to evacuate the work site in the event of an emergency. When work involves working at a remote location where medical facilities may not exist, it is imperative that the field team understand how to contact transportation companies to assist with transport to the closest medical facility. This information must be determined in advance of mobilizing to a remote location with no medical facilities, reviewed with the field team and verified with the identified transport companies on the day of field mobilization to ensure services are available. AECOM will bring a portable phone to the site to ensure that communications with local emergency responders is maintained, when necessary.

8.1 Emergency Information and References

Prior to working, the field personnel will review with the PM the scope of work and any site-specific information that may be available, including emergency information specific to the site location, emergency contact information and the designated emergency evacuation area. Emergency references of MEDICAL (ambulance), FIRE and POLICE services that can be summoned to the facility during an emergency should be determined as part of the Site Specific Data Form and should be discussed during the daily safety meetings. The field personnel and/or PM must ensure completion of the **Emergency Response Information** form ([Attachment B](#)) prior to mobilization.

8.2 Accident Reporting and Investigation

8.2.1 AECOM Reporting Requirements

All work-related H&S incidents, including injuries and illnesses, first aid cases, accidents, property damage incidents, and near-miss incidents must be reported to the PM as soon as possible. The PM should then notify the HSSE Focal to discuss the incident and to determine whether the incident must be reported to LTA (see below) and whether an accident investigation should be conducted and documented. If any person is injured, his/her supervisor, the PM and HSSE Focal must be notified immediately.

If an investigation will be required, it should be conducted as soon as emergency conditions are under control. The purpose of the investigation is not to attribute blame but to determine the pertinent facts so that repeat or similar occurrences can be avoided. An AECOM Accident Investigation Form in the *AECOM Field SH&E Manual* must be completed as soon as possible and submitted to the PM.

8.3 Emergency Contacts

Emergency Alarms, Evacuation Route/s and Procedures:

In the case of an emergency, AECOM will contact appropriate local emergency response agencies.

In the event of an emergency, all personnel should proceed to the designated emergency muster point (unless directed to an alternate muster point by the AECOM emergency coordinator).

Depending upon the type of emergency, AECOM will determine whether the muster point is a safe distance from the emergency location. Employees will be moved further from the site of the emergency if it is determined that the muster point is not at a safe distance.

JOB SAFETY RISK ASSESSMENT

Project:	Environmental Baseline Survey (EBS) and Environmental Impact Assessment (EIA) for the Former Turf Club at Bukit Timah	Location:	Former Turf Club at Bukit Timah
Work Activity:	Site walkabout/ reconnaissance, water quality sampling, biodiversity surveys, topographic survey, air/noise monitoring, borehole drilling and soil sampling		
Personnel Protective Equipment (PPE):	Long-sleeved shirt, long trousers, raincoat/poncho (as applicable), mosquito head net (as applicable), trekking pole (as applicable), face shield/mask, knee-high rubber boots, hard hat (as applicable) and insect repellent.		
Development Team:	Name/Designation Hanisah binte Sukarji / Consultant	Date 6 April 2023	Reviewed by: Liang Liang
			Name/Designation Jaypee Bautista / RA Champion 
			Date 10 April 2023
JSRA Type:	☒ New ☐ Revised		Next Review Date: 21 February 2024

No	Job Steps	Potential Hazard(s)	Existing Risk Control	Initial Risk Evaluation			Additional Risk Control	Residual Risk Evaluation			Responsible Person	Completed by:
				L	S	R		L	S	R		
1.1	Site walkabout / locating of point counts/transects - Inspecting the area / vicinity walk within the site - Conduct flora and fauna surveys	Slips, trips and fall due to uneven surface, slippery ground, soft soil, obstructions (fence/railing) or wayward objects (FB, FC)	- Use alternative routes, if available, for areas blocked by fences/railings and other obstructions - Assess for slippery, uneven surface or obstructions; remove wayward objects; identify safe routes and pathways; follow designated paths as shown in maps (access maps)	3	2	6	- If climbing over a low fence or railing cannot be avoided, always maintain three-point contact - Use trekking poles or stick to assess the ground and to aid balance when walking around uneven/grassy ground - Remove obstructions - Maintain a slow and steady walking pace while working onsite - Ensure anti-slip threads on safety boots are clean and not worn out	1	2	2	AECOM Personnel and Subcons (Camphora; Drilling contractor; ALS)	
1.2		Falling object causing head or bodily injuries to the field staff	- Inspect the site for the presence of potential falling objects such as tree branches, old logs, collapsing remnants of old structures, etc. - Identify alternative routes to avoid the potential area of impact from falling objects - Inform the team of the presence of the falling objects, if any	1	3	3	Not required	-	-	-	AECOM Personnel and Subcons (Camphora; Drilling contractor; ALS)	

No	Job Steps	Potential Hazard(s)	Existing Risk Control	Initial Risk Evaluation			Additional Risk Control	Residual Risk Evaluation			Responsible Person	Completed by:
				L	S	R		L	S	R		
1.3		Exposure to extreme heat	- Take periodic breaks and keep hydrated – drink water or ionic drinks - Stay under the shade whenever possible	3	2	6	- Apply sunscreen as necessary - Use umbrella as necessary	1	2	2	AECOM Personnel and Subcons (Camphora; Drilling contractor; ALS)	
1.4		Haze-related hazards – Difficulty in breathing (acute) and respiratory illness (chronic)	- Wear N95 mask when necessary	3	1	3	- Not required	-	-	-	AECOM Personnel and Subcons (Camphora; Drilling contractor; ALS)	
1.5		Biological hazard - Mosquito bites (and other insect bites – bees, hornets, ants)	- Read AECOM Safety for Life Safety Alert regarding mosquitoes and malaria - Be on an active lookout for beehives and hornet nests	3	2	6	- Use insect repellent (spray or patch) - Wear light coloured clothing with long sleeves and long pants - Be aware of peak mosquito hours – avoid works during dusk and dawn - Wear mosquito head nets - Use a poncho/raincoat, if necessary, to cover body parts	1	2	2	AECOM Personnel and Subcons (Camphora; Drilling contractor' ALS)	
1.6		Biological hazard - Snake bites (CB) / animal bites (wild animals like wild boars)	- Read AECOM Safety for Life Safety Alert regarding safety measures during snake season - Do not approach or provoke wild animals - Leave the area cautiously and slowly	2	3	6	- Avoid walking through dense vegetation / tall grass. Use known tracks or cleared routes (i.e., with no or little vegetation). - If there is a person who is familiar with the site, seek advice on safer or alternative routes. - Always carry a stick or trekking pole which you can use as protection - Use knee-high rubber boots or gaiters, especially when walking on grassy and	1	3	3	AECOM Personnel and Subcons (Camphora; Drilling contractor; ALS)	

No	Job Steps	Potential Hazard(s)	Existing Risk Control	Initial Risk Evaluation			Additional Risk Control	Residual Risk Evaluation			Responsible Person	Completed by:
				L	S	R		L	S	R		
							waterlogged areas - Avoid walking alone in remote sites					
1.7		Intermittent weather	- Stop work during heavy rain or thunderstorm	2	4	8	- Seek shelter; do not hide under trees in case of thunderstorms - Resume work only 30 minutes after a thunderstorm	1	3	3	AECOM Personnel and Subcons (Camphora; Drilling contractor; ALS)	
1.8	Site walkabout / locating of point counts/transects in golf course • Inspecting the area / vicinity walk within the site Conduct flora and fauna surveys	Physical hazard of flying golf balls that may hit and injure field staff	- Wear safety helmet, closed toe shoes and high-visibility vest - Let golfers know of presence when conducting field works to avoid location or pause their game to allow for safe works	1	3	3	- Not required	-	-	-	AECOM Personnel	
2.1	Water Quality Sampling • Grab sampling of water sample using sample container	Contact with preservatives in sampling bottles (CW)	- Wear appropriate PPE, such as nitrile gloves, long sleeve shirts and safety glasses - Avoid touching the inside of the sampling bottles	1	2	2	- Not required	-	-	-	AECOM Personnel	
2.2	• Use of water quality kit to measure water parameters	Ergonomic hazards – repetitive movements, overreaching, bending, twisting, slouching (O)	- Observe good ergonomic practices such as minimizing twisting, bending and slouching, avoiding overreaching and awkward positions - Sit on a stool, if possible -	3	2	6	- Use a trolley to carry buckets to designated waste disposal/storage location or Avoid overfilling the buckets (at most, half-filled) if a trolley is not available or usable	1	2	2	AECOM Personnel	
3.1	Installation / placement of noise monitoring equipment • Attach microphone to the pole and	Ergonomic – repetitive movement and awkward posture (slouching, twisting, overreaching, kneeling, lifting) when shifting / setting up the equipment	- Keep tools and equipment within arm's reach - Use proper lifting techniques - Use pallet jack/trolley or a two-man lift when lifting heavy equipment - Use proper equipment to extend	3	2	6	- Do not sustain awkward positions (e.g., shoulders too high/low, prolonged extension of elbow) - Take frequent breaks to rest muscles and hydrate - Use a stool or knee pad, if	1	2	2	AECOM Personnel	

No	Job Steps	Potential Hazard(s)	Existing Risk Control	Initial Risk Evaluation			Additional Risk Control	Residual Risk Evaluation			Responsible Person	Completed by:
				L	S	R		L	S	R		
	drive the pole to the ground		hand reach instead of overreaching				possible, to avoid awkward legs					
3.2	- Store battery-powered measurement equipment in the protective box - Secure cable and equipment box - Noise monitoring will run for 1 week before removal - Demobilization – retrieval of equipment from the site	Hand injury (cuts, lacerations, puncture, an abrasions) due to pinch points and sharp edges	- Identify and be aware of possible pinch points and sharp edges during installation of equipment	2	2	4	- Use cut and puncture resistant working gloves	1	1	1	AECOM Personnel	
4.1	Installation / placement of air monitoring equipment (subcon ALS) Attach equipment and solar power panel to the ground	Ergonomic – repetitive movement and awkward posture (slouching, twisting, overreaching, kneeling, lifting) when shifting / setting up the equipment	- Keep tools and equipment within arm's reach - Use proper lifting techniques - Use pallet jack/trolley or a two man lift when lifting heavy equipment - Use proper equipment to extend hand reach instead of overreaching	3	2	6	- Do not sustain awkward positions (e.g., shoulders too high/low, prolonged extension of elbow) - Take frequent breaks to rest muscles and hydrate - Use a stool or knee pad, if possible, to avoid awkward legs	1	2	2	AECOM & ALS Personnel	
4.2	- Secure cable and equipment box - Barricade the equipment with proper signs indicating the work, contact person details etc - Air monitoring will run for 1 week before removal	Hand injury (cuts, lacerations, puncture, an abrasions) due to pinch points and sharp edges	- Identify and be aware of possible pinch points and sharp edges during installation of equipment	2	2	4	- Use cut and puncture resistant working gloves	1	1	1	AECOM & ALS Personnel	

No	Job Steps	Potential Hazard(s)	Existing Risk Control	Initial Risk Evaluation			Additional Risk Control	Residual Risk Evaluation			Responsible Person	Completed by:
				L	S	R		L	S	R		
	Demobilization – retrieval of equipment from site											
5.1	Elevation/Topo Survey (subcon YJP Surveyor)	Struck by moving vehicles (SB)	Wear high visibility clothing when moving around areas near the road	2	3	6	- Assign traffic watch/spotter - Utilize cones, signs, flags and/or other traffic control, if necessary	1	3	3	AECOM Personnel & YJP Surveyor	
5.2	- Locate monitoring wells/survey points - Open the well cover and well cap and set up survey equipment	Slip, trips and falls due to slippery and uneven surface and/or due to obstructions (FS, SA)	- Identify safe routes and pathways; - Assess for slippery, uneven surface or obstructions	3	2	6	- Remove obstructions - Maintain a slow and steady walking pace while working onsite. Ensure anti-slip threads on safety boots are clean and not worn out	1	2	2	AECOM Personnel & YJP Surveyor	
5.3	- Read elevation data and coordinates/north ing-easting - Moving from each location	Falling object causing injuries to the field staff	- Inspect the site for the presence of potential falling objects such as tree branches, old logs, collapsing remnants of old structures, etc. - Identify alternative routes to avoid the potential area of impact from falling objects - Inform the team of the presence of the falling objects, if any	2	3	6	- Rope off the area, if possible, where fall hazards may exist - Use hard hats in the vicinity of the area where fall hazard may exist - Use alternative routes, if available	1	3	3	AECOM Personnel & YJP Surveyor	
5.4		Hand injury, pinch points (CBT)	- Be aware of possible pinch points or sharp edges when opening well covers/caps - Use mechanical means (e.g. hooks) when opening well covers/caps - Wear appropriate working gloves	2	1	2	Not required	-	-	-	AECOM Personnel & YJP Surveyor	
5.5		Biological hazard - Snake bites (CB) / animal bites (wild animals, stray dogs)	- Do not approach or provoke wild animals - Leave the area cautiously	2	3	6	- Always carry a stick or trekking pole which you can use as protection - Wear knee-length rubber boots or gaiters	1	3	3	AECOM Personnel & YJP Surveyor	
6.1	Utility Survey Scan area of proposed	Slip, trips and falls due to slippery and uneven surface and/or due to	- Identify safe routes and pathways; follow designated paths - Assess for slippery, uneven	3	2	6	- Remove obstructions - maintain a slow and steady walking pace while working onsite	1	2	2	AECOM and STATS Personnel	

No	Job Steps	Potential Hazard(s)	Existing Risk Control	Initial Risk Evaluation			Additional Risk Control	Residual Risk Evaluation			Responsible Person	Completed by:
				L	S	R		L	S	R		
	borehole location with radiodetector • Mark locations and underground utilities with spray paint	obstructions (FS, SA)	surface or obstructions				- Maintain clean anti-slip threads on safety boots and not worn out					
		Exposure to extreme heat	- Take periodic breaks and keep hydrated – drink water or ionic drinks - Stay under the shade whenever possible	3	2	6	- Apply sunscreen as necessary - Use umbrella as necessary - Work during non-peak hours	2	1	2	AECOM and STATS Personnel	
		Struck by moving vehicles (SB) within site vicinity	- Walk in designated paths - Wear high visibility clothing when moving around traffic path	2	3	6	- Utilize cones, signs, flags and/or other traffic control, if necessary	1	3	3	AECOM and STATS Personnel	
		Ergonomic hazard – repetitive movement and awkward postures (slouching, twisting, overreaching, kneeling) (O)	- Avoid awkward positions - Keep all tools and equipment within arm's reach	1	2	2	- Not required	-	-	-	STATS Personnel	
6.2	Elevation Survey • Locate monitoring wells/survey points • Open the well cover and well cap and set up survey equipment • Read elevation data and coordinates/northing-easting • Move to the next well location	Exposure to extreme heat	- Take periodic breaks and keep hydrated – drink water or ionic drinks - Stay under the shade whenever possible	3	2	6	- Apply sunscreen as necessary - Use umbrella as necessary - Work during non-peak hours	2	1	2	STATS Personnel	
		Struck by moving vehicles (SB) within site vicinity	- Walk in designated paths - Wear high visibility clothing when moving around traffic path	2	3	6	- Utilize cones, signs, flags and/or other traffic control, if necessary	1	3	3	STATS Personnel	
		Hand injury, pinch points (CBT)	- Identification of possible pinch points or sharp edges when opening well covers/caps - Wear appropriate working gloves	2	1	2	- Not required	-	-	-	STATS Personnel	
6.3	Manual digging using hand auger • Position auger at designated borehole location and apply pressure on	Utility strike (SA)	- Conduct cable detection / utility survey prior to intrusive activities	2	3	6	- Visually inspect borehole walls and bottom for signs of utility lines at every clearance interval	1	3	3	STATS Personnel	
		Hand injury – pinch points: connection point between rod stems (CBT);	- Identify possible pinch points and sharp edges	3	1	3	- Not required	-	-	-	STATS Personnel	

No	Job Steps	Potential Hazard(s)	Existing Risk Control	Initial Risk Evaluation			Additional Risk Control	Residual Risk Evaluation			Responsible Person	Completed by:
				L	S	R		L	S	R		
	auger handle while simultaneously rotating the auger in a clockwise direction	sharp/pointed edges or objects										
	- Pull the auger up once the auger bucket is filled to obtain or remove the soil - Continue until desired depth is achieved - Clear soil cuttings	Ergonomic hazard – hand, arm or back injury (O)	- Practice proper lifting procedures – use leg muscles to lift auger, and limit auger handling heights to below the shoulder - Check and confirm no loose joints at connection points to prevent jerky movements - Position feet shoulder-width apart to provide stability when working - Do not allow personnel to sit on auger handle during manual drilling	1	2	2	- Not required	-	-	-	STATS Personnel	
6.4	Soil Sampling - Collect soil sample from auger bucket/drill bit - Log soil descriptions - Pack the soil into sampling jar	Skin contact with potentially contaminated soil (CW)	- PPE – Long sleeve shirt, nitrile gloves, safety glasses - Place all potentially contaminated soil cleared from auger and/or drill in plastic lined gunny bags and cover with waterproof covers to prevent leachate runoff	2	1	2	- Not required	-	-	-	AECOM and STATS Personnel	
		Hand injury – cuts and strain to thumb/fingers (SA, O)	- Use hand tools (spatula) to grab soil samples - Use hand tools (pestle) to compact stiff soils into soil jars	1	2	2	- Not required	-	-	-	AECOM and STATS Personnel	
		Ergonomic hazards – overreaching and awkward posture when logging and sampling (O)	- Move closer to soil samples or bring auger closer to sampling area - Sit on a stool or use a kneeling pad when sampling/logging over an extended period of time (e.g. >60s) - Take short breaks in between if there is need to be strenuous posture for a long period of time	1	2	2	- Not required	-	-	-	AECOM and STATS Personnel	
6.5	Gauging of water level with oil water	Potentially impacted water (CW)	Wear vinyl/nitrile gloves, long sleeve shirt and safety glasses	2	1	2	- Not required	-	-	-	AECOM Personnel	

No	Job Steps	Potential Hazard(s)	Existing Risk Control	Initial Risk Evaluation			Additional Risk Control	Residual Risk Evaluation			Responsible Person	Completed by:
				L	S	R		L	S	R		
	interface meter - Open well cover and cap - Lower interface meter to water level (indicated by intermittent beep) and bottom of well - Read and record readings on the meter tape	Cuts and abrasions to hands due to sharp edges in well cover or opening of tight-fitting cap (SA, O)	- Wear cut-resistant gloves - Use appropriate tools or mechanical means such as manhole cover keys or hooks to open the well cap	3	1	3	- Not required	-	-	-	AECOM Personnel	
		Awkward leg position when kneeling to gauge the wells (O)	- Sit on a stool or kneel on soft padded surface while gauging over extended period of time (e.g. more than 60 seconds) - Stand when gauging, if possible	2	1	2	- Not required	-	-	-	AECOM Personnel	
		Slip, trip, fall on slippery and uneven surface, and/or obstructions/wayward objects (FS, SA)	- Identify safe routes and pathways; follow designated walkways - Assess for slippery, uneven surfaces or obstructions - Remove wayward objects - Wear safety shoes; with clean, intact anti-slip threads.	3	1	3	- Not required	-	-	-	AECOM Personnel	
7.1	Biodiversity survey	Refer to the General Safety Plan provided in Appendix C and developed by Camphora Pte Ltd for this project										

My signature below indicates that all requirements and conditions listed above have been verified, met, and reviewed will all affected personnel prior to start of work.

Supervisor's Signature:

Liang Liang

RISK ASSESSMENT GUIDE

Assessment of Severity:

LEVEL	SEVERITY	DESCRIPTION
1	Negligible	Not likely to cause injury or ill-health.
2	Minor	Injury or ill-health requiring first-aid only (includes minor cuts and bruises, irritation, ill-health with temporary discomfort).
3	Moderate	Injury requiring medical treatment or ill-health leading to disability (includes lacerations, burns, sprains, minor fractures, dermatitis, deafness and work-related upper limb disorders).
4	Major	Serious injuries or life-threatening occupational disease (includes amputations, major fractures, multiple injuries, occupational cancer, acute poisoning).
5	Catastrophic	Fatality, fatal diseases or multiple major injuries.

Assessment of Likelihood:

LEVEL	LIKELIHOOD	DESCRIPTION
1	Rare	Not expected to occur but still possible
2	Remote	Not likely to occur under normal circumstances
3	Occasional	Possible or known to occur
4	Frequent	Common occurrence
5	Almost Certain	Continual or repeating experience

Risk Evaluation:

Severity (S) \ Likelihood (L)	Rare (1)	Remote (2)	Occasional (3)	Frequent (4)	Almost Certain (5)
Catastrophic (5)	5	10	15	20	25
Major (4)	4	8	12	16	20
Moderate (3)	3	6	9	12	15
Minor (2)	2	4	6	8	10
Negligible (1)	1	2	3	4	5

Acceptability of Risk and Recommended Actions:

RISK LEVEL	ACCEPTABILITY OF RISK	RECOMMENDED ACTIONS
Low Risk (1-3)	Acceptable	- No additional risk control measures may be needed. - However, frequent review and monitoring of hazards are required to ensure that the risk level assigned is accurate and does not increase over time.
Medium Risk (4-12)	Moderately acceptable	- A careful evaluation of the hazards should be carried out to ensure that the risk level is reduced to as low as reasonably practicable (ALARP) within a defined time period. - Interim risk control measures, such as administrative controls or PPE, may be implemented while longer term measures are being established. - Management attention is required.
High Risk (15-25)	Not acceptable	- High Risk level must be reduced to at least Medium Risk before work commences. - There should not be any interim risk control measures and risk control measures should not be overly dependent on personal protective equipment or appliances. - If practicable, the hazard should be eliminated before work commences. - Immediate management review/ intervention is required before work commences.

Code for Potential Hazards:

Caught Between (CBT)	Contacted By (CB)	Fall to Below (FB)	Overexertion (O)	Struck Against (SA)
Caught In (CI)	Contact With (CW)	Fall – Same Level (FS)	Release To (R)	Struck By (SB)

APPENDIX C – SNAKE BITE MANAGEMENT PROTOCOL	22

1 INTRODUCTION

The Workplace Safety and Health (WSH) Act and its subsidiaries regulations was gazetted in 1 Mar 2006. It is based on the three principles of WSH Management:

- 1) Reducing risk at the source by requiring all stakeholders to remove or minimise the risk they created
- 2) Encourage industries to adopt greater ownership of safety and health outcomes
- 3) Impose higher penalties for poor safety management and outcomes

1.1 OBJECTIVES

This manual provides guidelines for the company's safety, health and environmental management system to ensure a safe working environment and protect the well-being of our staff. The main objectives of the manual are as follows:

- 1) Document our company's safety policy and safety organisation structure
- 2) Document our safety management system and safe work practices
- 3) Highlight the important aspects of safety, health and environmental protection
- 4) Ensure regular reviews to identify any workplace hazards and our risk assessment matrix (RAM) are relevant and up to date
- 5) Ensure our staff are trained and aware of the hazards and RAM
- 6) Ensure a reporting system is in place for any observation of unsafe acts

2 ENVIRONMENT HEALTH & SAFETY POLICY

Our company, CAMPHORA PTE LTD, is COMMITTED to the environmental, health and safety of our staff through:

- 1) Compliance with all relevant WSH regulations
- 2) Adoption of best WSH practices and continue to uphold and improve our health and safety standards
- 3) Open reporting system for any unsafe acts
- 4) Responsible caring for the environment and our staff
- 5) Educate on environmental protection and workplace safety and health

3 SAFETY MANAGEMENT SYSTEM

3.1 SAFETY ORGANISATION STRUCTURE

The safety organisation structure is as shown below in Figure 3.1-1. Our Company is led by Mr Derek Yap, and the appointed safety officer is Miss Thio Hui Bing. We collaborate with Arboriculture and Specialist Team Associates and work in various workplaces depending on projects.

Figure 3.1-1. Safety organisation structure

3.2 SAFETY MANAGEMENT SYSTEM

This section documents our company's safety management system. Given the small size of our company, we have an appointed safety officer instead of a safety team. He/ She will be assisted by various project leads. The roles and responsibility of the safety officer is as follows:

- 1) Update the WSH manual regularly (once every 3 years) to ensure its relevance or when there's any changes in our work process or employees
- 2) Keep an updated record of Read and Acknowledge
- 3) Broadcast any relevant changes to the document to all employees through emails or company group chat
- 4) Handle any WSH related incidents
- 5) Educate our associates working along with our staff of our safety practices

All staff are to read and comply with the safety practices documented within. New employees and interns will be briefed during their orientation by our admin officer, before commencement of work.

All staff will be issued with personal protective equipment (PPE) to be used in construction sites. The PPE are helmet with chin strap and eye goggles, safety vest, and safety boots (Figure 3.2-1) for head, eyes, visibility and foot protection purpose. If there is a need to handle wildlife, appropriate equipment such as gloves, will be supplied. Secateurs will also be provided for clearing of path in forested vegetation. If necessary, workers will be hired to clear the survey trail for us.

Figure 3.2-1. Photos of PPE: helmet with chin strap, eye goggles, safety vest and safety boots with steel toe cap to be used in construction site.

3.3 OPEN REPORTING SYSTEM

Our company practises an open sharing and reporting system such that if any employees or associates were to observe any unsafe acts, they can report directly to our safety officer or company director for timely intervention. Everyone is encouraged to openly share and learn from the findings. If required, project leads are to assist our safety officer for any implementation or mitigation actions taken.

3.4 TRAINING

This e-manual is made available to all staff in our company and uploaded in our server. All staff are to read and comply with the documents and new employees are briefed during their orientation before commencement of work. A record of Read and Acknowledge is kept and updated by our Safety Officer. When there are changes to the document, they will be broadcasted by Safety Officer to all employees through emails or company group chat. Associates working along with our staff are also educated on our safety practices.

Safety protocol and emergency response plans would evolve with the range of context we operate in. On job adjustment of safety needs will be discussed, executed and evaluated after to identify learning points would be used to further improve the plan.

3.5 MANAGEMENT OF SUBCONTRACTORS

Our company may need to engage the services of other arborists / specialists for certain projects. In these cases, it is necessary for project leads to:

- 1) Provide a short briefing of the site to the subcontractors before or during the first survey to level up their safety knowledge. The briefing can include information such as orient them to the site, what kind of work is required, any likely work hazards at the site and mitigation measures, safety gears, etc
- 2) Ensure they bring or wear the necessary safety gears/equipment if required
- 3) Ensure they adhere to our safety practices

4 RISK MANAGEMENT - HAZARD IDENTIFICATION, RISK ASSESSMENT & RISK CONTROL

4.1 DEFINITIONS

Conducting risk assessments and implementing risk control measures are requirements under the WSH (Risk Management) Regulations. A 'hazard' means anything with the potential to cause bodily injury, and includes any physical, chemical, biological, mechanical, electrical or ergonomic hazard. A 'risk' means the likelihood that a hazard will cause a specific bodily injury to any person.

The employer, self-employed person and principal shall take all reasonably practicable steps to eliminate any foreseeable risk to any person who may be affected by his undertaking in the workplace. Where it is not reasonably practicable to eliminate the risk, the employer, self-employed person or principal shall implement :

- 1) such reasonably practicable measures to minimise the risk

2) such safe work procedures to control the risk

Risk management means the need to first identify hazards, potential accidents or incidents, followed by risk evaluation, and thereafter risk control. Risk evaluation refers to evaluate risk levels of workplace hazards and prioritise the hazards to be controlled. Risk control involves formulating control measures according to hierarchy of controls, and analyse and evaluate residual risks.

Hierarchy of risk control means the steps taken to mitigate risk in order of priority. They are elimination of risk, substitution, engineering and administrative control, followed by use of PPE.

4.2 DIVERSE OPERATING ENVIRONMENT

Our company has a unique and diverse working environment, largely in outdoor workplace subjected to numerous environmental factors (Figure 4.2-1). Our job involves conducting surveys and installing/maintaining camera traps in outdoor environment ranging from tropical forests, grasslands, streams, mudflats, coastal shores, etc. We are also required to perform periodic fauna or flora inspections in construction sites for some projects. In some projects, our staff has to conduct our survey in a boat or set up camera traps on trees. Broadly our workplace can be categorised into two types, forested environment and construction sites. In all cases, we will identify possible hazards and conduct proper risk assessment and control, so as to mitigate the risks as far as practicable while fulfilling our job requirements. The details of the risk assessment and risk control matrix for various workplaces can be found in Appendix A (sample format Appendix A0), while the following sections 4.3 to 4.6 summarise the identified possible hazards and broad risk mitigation measures with respect to our typical working environment. The list may not be exhaustive. We are also conscious of the impact made to the environment while conducting our surveys. We strive to avoid unnecessary clearing of vegetation and trampling on vegetation as much as we can.

Figure 4.2-1. Our diverse outdoor working environment ranges from forest, grassland, stream, mudflat, coastal shore in diurnal and nocturnal conditions, as well as in construction sites.

4.3 FORESTED SITES

Most of our surveys are conducted in outdoor forested sites. Table 4.3-1 provides a list of identified possible hazards (not exhaustive) and the broad risk mitigation measures. The details of the risk assessment and risk control matrix for working in outdoors, forested sites can be found in Appendix A1.

Table 4.3-1. A list of possible hazards and the broad risk mitigation measures

S/N	Possible Hazards Identified That May Cause Body Injuries	Broad Risk Mitigation Measures
1	Heat injuries, lightning strikes, fallen branches or trees, slippery terrain resulting from weather elements such as heat, humidity, lightning, wind and rain	Conduct weather check before commencement of work. If the weather forecast is threatening, delay or stop work temporarily. If weather forecast deteriorates during the course of work, get out of the forest as soon as practicable and seek shelter. Ensure well hydrated and bring enough water to prevent heat injuries. Applicable to all hazards (S/N 1 to 9) stated: Avoid working alone. Work in a team of at least two person; three person for night surveys. Remain contactable. Carry a first aid kit. Know the emergency response plan.
2	Slips/trips/falls due to terrain such as uneven surface, steep slope, slippery surface, potholes	Be aware and keep a good lookout of the surroundings. Wear appropriate footwear. Highlight to all if new hazards are sighted during course of work, such as fallen trees, potholes. Use flagging tape to demarcate the hidden obstacles
3	Bites/scratches/cuts due to encounters with thorns, toxic flora and dangerous fauna that can bite or sting such as reptiles, insects	Be aware and keep a good lookout of the surroundings. Avoid confrontation with any fauna. Avoid touching toxic plants. <i>Do not apply perfume for field work as the scent may attract bees/wasps/hornets.</i> <i>Switch off headlight temporarily and move out to safe areas, if it is noticed that bees/wasps/hornets flying close by the light source.</i> Highlight to all if new hazards are sighted during course of work, such as bees, wasps or hornet nests. Use flagging tape to demarcate the location of bees/wasps/hornets nests. First aid kit to have anti-histamine medicine for bee stings.

		Check your bags prior to carrying it, if you leave it on the ground, in case of fauna crawling into it Wear gloves to handle bats to prevent bites and other PPE such as face mask as required
4	Cuts and injuries due to sharp objects, debris, thorns, fallen trees and broken branches	Be aware and keep a good lookout of the surroundings. Wear appropriate protective clothing, helmet, safety vest, footwear or PPE
5	Improper use of cutting tools and hammer in the course of work	Carry appropriate tools to assist us such as torch, headlight, secateurs or parang. Use the correct method of cutting; look before you cut and hammer (be aware of where you place your hands)
6	Trips/falls due to low lighting in night surveys	Bring along headlamp or torch. Be aware and keep a good lookout of the surroundings.
7	Back injuries and muscle strains from carrying of heavy equipment	Adopt correct postures in lifting and putting down heavy equipment (Figure 4.3-1)
8	Fire hazard from refuelling of generator with petrol for moth survey. Rashes or burning sensation from skin exposure to petrol	Proper storage of petrol in tightly lid suitable container. Wait for motor to cool down before refuelling. No smoking, no sparks in vicinity. Refuel in well ventilated open space and use funnels to avoid spills. Wipe generator dry after refuel. Bring fire extinguisher. Carry first aid kit.
9	Burns from handling hot light bulbs used during moth survey	Do not touch the hot light bulbs. Use gloves. Allow time for them to cool down before dismantling. Carry first aid kit.
10	Risk of boat capsize during boat survey. Wet or slippery surface	Wear life jacket at all times on the boat and appropriate protective clothing, footwear with good grip
11	Risk of fall from lorry crane during installation of camera traps on trees (arbor works)	Wear appropriate PPE and helmet. Use of the correct rated equipment and fall arrest system for tree climbing or lifting crane works, such as safety harness, ropes and carabiners. Buddy system to ensure ropes are securely fastened
12	Risk of injury due to crossing deep or fast flowing stream, or canal	Assess surroundings to find a crossing at narrow, slow moving part of stream. Can use a stick to determine the depth and softness of the substrate. Be careful of slippery surface and walk with care. Where possible, put plank across to facilitate crossing. As a guide, a depth of less than knee high water level is usually crossable. Safe crossing point to be flagged and location to be shared. If stream cannot be crossed safely, detour to find another safer route

4.3.1 Hazards of Improper Lifting Technique of Heavy Equipment

Our work sometimes requires us to carry heavy equipment to and from our sites. It is important that we are aware of the right technique of lifting to prevent back injuries and muscle strains in the long term. Where possible, we should use trolley to assist us, or have two persons helping to carry, or take turns to carry, or take short breaks in between to rest while walking with the heavy load to site. Figure 4.3-1 illustrates the improper and correct technique of lifting of heavy equipment.

Figure 4.3-1. Correct lifting technique for heavy equipment taken from online reference (Appendix B)

4.3.2 Hazards in Handling Petrol for Refueling of Generator

During moth trapping survey, we require generator that runs on petrol which can pose fire and explosion hazards. It should be noted that skin exposure to petrol can cause rash or burning sensations. Hence, proper storage and safe handling (including refueling) of petrol is important despite the small quantity that we used. Petrol must be stored in suitable containers with the caps screwed on tightly. The container should be properly labelled. During the field survey, we must wait for the motor to cool down and choose a well-ventilated area when refueling. There should be no smoking in the vicinity, and we have to check surroundings for sparks or lighting before refuel. Use a pouring spout or funnel to avoid spills. Always shut off engine and allow generator to cool before refuelling. After refuelling, wipe the generator clean and dry.

4.4 CONSTRUCTION SITES

Some of our inspections and field works required us to work in construction sites. This requires us to attend the safety induction course conducted by contractors, wear appropriate PPE and abide by their safety rules. Generally, our work duration at construction site is maximum of 2-3 hours, hence there is no requirement for the use of ear plugs or respiratory mask. Table 4.4-1 provides a list of identified possible hazards and the broad risk mitigation measures. The details of the risk assessment and risk control matrix for working at construction site can be found in Appendix A2.

Table 4.4-1. A list of possible hazards and the broad risk mitigation measures

S/N	Possible Hazards Identified That May Cause Body Injuries	Broad Risk Mitigation Measures
1	Heat injuries, lightning strikes, fallen branches or trees, slippery terrain resulting from weather elements such as heat, humidity, lightning, wind and rain	Conduct weather check before commencement of work. If the weather forecast is threatening, delay or stop work temporarily. If weather forecast deteriorates during the course of work, seek shelter and stay indoors. Ensure well hydrated and bring enough water to prevent heat injuries. Applicable to all hazards (S/N 1 to 5) stated: Attend safety induction course conducted by contractors. Abide by the safety rules in construction sites. Avoid working alone. Work in a team of at least two persons. Remain contactable. Know the emergency response plan.
2	Slips/trips/falls due to terrain such as uneven surface, steep slope, slippery surface, potholes	Be aware and keep a good lookout of the surroundings. Wear appropriate footwear. Highlight to all if new hazards are sighted during course of work, such as fallen trees, potholes. Use flagging tape to demarcate the hidden obstacles
3	Bites/scratches/cuts due to encounters with thorns, toxic flora and fauna that can bite or sting such as reptiles, insects	Be aware and keep a good lookout of the surroundings. Avoid confrontation with any fauna. Avoid touching toxic plants. Highlight to all if new hazards are sighted during course of work, such as bees, wasps or hornet nests. Use flagging tape to demarcate the location of bees/wasps/hornets nests. First aid kit to have anti-histamine medicine for bee stings
4	Sharp objects and debris in construction sites	Be aware and keep a good lookout of the surroundings. Wear appropriate protective clothing, helmet with chin strap, safety vest, footwear or PPE
5	Walking around in construction sites with moving construction equipment	Be aware and keep a good lookout of the surroundings. Wear appropriate protective clothing, helmet with chin strap, safety vest, footwear or PPE

4.5 SHEPHERDING WILDLIFE, FAUNA RESPONSE AND RESCUE

For some projects, our company is engaged to respond to any fauna rescue and shepherd the trapped fauna out of project sites. Occasionally, animals such as wild boar or snake accidentally went into project site and are trapped. At times, they may be found to be injured. Shepherding (passive) of wildlife involves deliberate act of herding the wildlife out of the trapped site in a direction towards the forest. Therefore, there is a chance of closer contact with wildlife and in some cases, a need to handle or rescue the fauna.

Hazards identified include aggressive display by fauna, such as bites, scratches or charge by large animals. Mitigation measures broadly include understanding the behaviour of fauna, keeping a safe distance from wildlife while shepherding, wearing of protective gears such as gloves, having the appropriate tools, not handling venomous snakes unnecessarily and engaging specialists who are experienced in animal handling. The details of the risk assessment and risk control matrix can be found in Appendix A3.

4.5.1 Adherence to the Wildlife Act

In accordance with the Wildlife Act under Section 5C - Killing, trapping, taking of wildlife, if our company were to be engaged in trapping or taking of wildlife, approval from Director-General of Wildlife Management must be granted. This will require at least one of our staff to be certified by attending the Animal Management course, a course conducted by CUGE, NParks.

Our Fauna team has attended minimally the basic module (Birds) of Animal Management Course conducted by CUGE, NParks in May and Nov 2021. Most of our team has also attended the intermediate modules on Reptiles and Mammals. Any new permanent staff will be sent to attend the courses. The course will equip us as animal management specialists with the skills to perform their work while ensuring public and personnel safety, as well as animal welfare. The course aims to develop a professional and competent and core group of animal management specialists who are often called in to mitigate human-wildlife incidents.

In construction sites, in the event that any entrapped fauna is found, personnel will work towards ensuring their safe rescue, release and/ or relocation in accordance with the fauna response plan in accordance to the NParks protocols. As a general guide, if there's any fauna entrapment or injured fauna that warrants help or relocation, we will call NParks hotline before taking action. Reptile specialist will be activated and equipment targeting each fauna group (e.g. snake tongs, snake bag, gunny sacks, snake tubes, gloves) will be used in order to ensure swift capture as well as reduced stress and safety to fauna. Safety PPE will be worn during handling to ensure safety to handlers. Refer to Camphora's wildlife response plan for the latest details.

4.6 INFECTIOUS DISEASES SUCH AS COVID-19

In 2020, the global transmission of infectious disease, COVID-19, changes the way things work. With the post circuit-breaker measures in place from June 2020 onwards, there is a need to comply with the latest regulations set by the government. However [since the first quarter of 2022, COVID-19 is no longer regarded as pandemic and the restrictions are lifted \(Refer to HPB/BCA/MOM website\)¹](#). While working at construction sites, we will still abide by the rules set by contractors.

Where applicable to [future infectious diseases situations](#), we will refer to Appendix A4 that shows the details of our risk assessment matrix specific to COVID-19 [or other similar situations](#). To prevent the risk of transmission, the risk mitigation measures include, but not exhaustive:

- 1) Be aware and comply with government latest regulations
- 2) Practise good personal hygiene
- 3) Wear a mask [where applicable](#); minimise contact
- 4) As far as possible, use your own PPE. If there is a need to share, sanitise them before passing it to other staff to use

¹ Reference MOM website: [Advisories on COVID-19 \(mom.gov.sg\)](#) and [Updated advisory on COVID-19 vaccination at the workplace \(mom.gov.sg\)](#)

- 5) Maintain social distance of at least 1m as far as practicable
- 6) Work in a team with composition as per latest guidelines stipulated by the government
- 7) If one is feeling unwell, do not come to work, stay at home and see doctor
- 8) Attend related safety course as required
- 9) Vaccination when available

5 EMERGENCY RESPONSE PLAN

5.1 EMERGENCY RESPONSE PLAN

Establishing and the effective implementation of an emergency response plan is crucial in saving lives and minimising losses in any emergency situations. These may include:

- 1) injuries sustained while working in forested sites
- 2) insect/ snake bite/injury by fauna
- 3) lightning strikes
- 4) injuries sustained while working in construction site
- 5) employee falling down from tree or lorry crane

The following list of items (non-exhaustive) may be included in the establishment of an emergency response plan:

- 1) procedures for raising of alarm
- 2) procedures for evacuation and rescue of victim
- 3) provision of means of rescue and first aid
- 4) provision of means of communication with relevant government authorities and response agencies
- 5) establishing an emergency response team with the duties and responsibilities of each member clearly defined, with emergency contacts

This emergency response plan forms part of the overall emergency response plan for the workplace.

In the event of any WSH related accident or incident that resulted in bodily injury of our employee, the team is to stop work immediately and assess the seriousness. If the injury is minor such as a small cut, attend to the injury using the first aid kit. Team lead is to report the incident to our director through our safety officer and decide if work can still continue. Otherwise, if the injury is assessed to be serious such as sprain, fracture, heat injury, or life threatening, the team is to leave the forest and seek medical help as soon as possible, while reporting the incident to safety officer at the same time. If the injured person is unable to walk on his own or team is unable to get him out without support, seek help and call the ambulance for assistance to evacuate from site. The flow chart for our emergency response plan for injury case is also illustrated in Figure 5.1-1.

Figure 5.1-1. Flow chart for our emergency response plan in the event injured personnel at work site

In the event, the person is split up from team and got lost in the forest, he is to try to contact other team members, remain calm and stay put. The team mates will look for him. If unable, seek help and report to our safety officer.

It is crucial that everyone has to be conversant of the emergency response plan and procedures, the numbers to call, as well as know the 4 hospitals with snake anti-venom. In the event of occurrence of snake bite, we have a protocol for the emergency response which can be found in Appendix C.

Regular drills and quizzes should be conducted. An evaluation of the drill performance should be carried out and learning points should be used to improve the plan.

5.2 FIRST AID

First Aid is rendering immediate help to an injured person. The life of an injured person may depend on proper first-aid given within the first few minutes of an accident. Besides saving lives, first-aid treatment is important in preventing further injury and pain. Our office has some personnel that are trained in first aid (Table 5.2-1) and the plan is to eventually send all personnel for first aid course. For more information, refer to the publication, "A Guide to the Workplace Safety and health (First Aid) Regulations" which is available at MOM's website: www.mom.gov.sg.

Table 5.2-1. List of trained personnel in first aid

S/N	Name	Expiry date
1	Joys Tan	25 June 2023
2	Sheryl Seet	2024

RISK ASSESSMENT FORM

Company :		Camphora Pte Ltd		Conducted by:		Derek Yap				Reference	
Process :		Conducting surveys of flora and fauna		Names, designations		Lead Arborist				Cam-EIA	
Location :		Forested sites		Date :		Apr-23					
First Assessment Date:		Jul-21		Project Name :		Turf City EIA					
Last Review Date:		Apr-23									
1. Hazard Identification				2. Risk Evaluation				3. Risk Control			
1a.	1b.	1c.	1d.	2a.	2b.	2c.	2d.	3a.	3b.		
No.	Work Activity	Hazard	Possible Accident / Ill Health & Persons-at-Risk	Existing Risk Control	S	L	Risk Level	Additional Risk Control	Action Officer, Designation		
				(if any)					(Follow-up date)		
1	Mobilisation of project team	Unaware of site conditions and site-specific safety rules and regulations	Entering into prohibited areas, injury to persons	Ensure approval has been granted by clients/authority; carry approval letter if available; seek advice from clients regarding site access/conditions.	2	1	2 (L)	Study topography plans prior to entry.	Designated team leader for the project		
2	Working within natural/forested areas during the day	Falling branches, dangerous fauna, thorns, plants with sap that cause irritations, unobvious obstacles, uneven ground	Stings/bites/scratches, trips/slips/falls, head injury, feet injury, getting lost	Work in a group of at least 2 people; visually assess the surroundings for hornets/bees/snakes/dead branches/roots/protruding vegetation while walking; stamp feet and make loud noises when walking through thick vegetation; wear long sleeves and pants; wear appropriate close-toed footwear; use clear paths where possible; ensure experienced field personnel are present at all times; bring first aid kit.	3	1	3 (L)	Exit forested site during inclement weather; use GPS to track location; bring spare batteries for GPS; remain contactable by mobile phone.	Designated team leader for the project		
3	Night works	Dangerous fauna, getting lost	Stings/bites/scratches, trips/slips/falls, head injury, feet injury, getting lost	Work in a group of at least 3 people; visually assess the surroundings for hornets/bees/snakes/dead branches/roots/protruding vegetation while walking; stamp feet and make loud noises when walking through thick vegetation; wear long sleeves and pants; wear appropriate close-toed footwear; use clear paths where possible; ensure experienced field personnel are present at all times; bring first aid kit; avoid areas where crocodiles have been sighted; ensure sufficient light while working.	2	1	2 (L)	Use GPS to track location; bring spare batteries for GPS; remain contactable by mobile phone; bring spare batteries for torches/headlamps	Designated team leader for the project		
4	Working at water edges	Falling into water	To trips/slips/falls, drowning	Work in a group of at least 2 people; wear appropriate close-toed footwear; avoid working near the edge of deep water; wear life vest if working near the edge of deep water is necessary.	4	1	4 (L)	Conduct works during low tide.	Designated team leader for the project		

5	Working within mudflats, intertidal areas or water bodies	Soft substrate, large boulders, loose fishing lines, dangerous animals	Stuck in mud, stings/bites/scratches, trips/slips/falls	Work in a group of at least 2 people; be at most 2 m from the other personnel when in the water; wear appropriate footwear such as booties; wear long sleeves and pants; ensure experienced field personnel are present at all times; train personnel to move through muddy areas and identify points to avoid and traverse; bring first aid kit.	3	1	3 (L)	Ensure that a third individual is present on-site (and who is not in the water) and remains contactable by mobile phone; conduct works during low tide; be aware of tide times; ensure access to hot water to treat stings/bites by echinoderms, fishes, worms, etc.	Designated team leader for the project
6	Working near steep slopes	Falling from slope	Injury from trips/slips/falls	Avoid steep slopes.	2	1	2 (L)	Avoid works during inclement weather.	Designated team leader for the project
7	Working outdoors	Lightning	Lightning strike	Stop all work activity and seek shelter when there is lightning.	5	1	5 (M)	Continue work at least 30 minutes after the last lightning strike; monitor NEA app for lightning activity.	Designated team leader for the project
8	Working outdoors	Heat	Heat sickness, heat stroke	Bring plenty of water; take regular breaks	2	1	2 (L)	Wear light-coloured clothing.	Designated team leader for the project
9	Collection of plant specimens	Use of secateurs	Cuts and injuries by improper use of secateurs	Be aware of cutting points; do not deviate attention when making cuts.	2	1	2 (L)	Wear gloves.	Designated team leader for the project
10	General field work during Phase 2 of post-circuit breaker period	Physical contact with other personnel that can lead to the spread of the coronavirus	COVID-19 infection	Work in small teams of no more than 4 people; ensure proper record-keeping of personnel present for each work session; keep a minimum safe distance of 1 m from other personnel.	5	1	5 (M)	Support contact tracing by activating the TraceTogether app; check body temperature before starting work and see a doctor and do not go to work if temperature is 37.8°C or above.	Designated team leader for the project
11	Bat trapping and handling of live bats	Sustaining accidental bat bites	Potential spread of unknown diseases	Put on full PPE (bite-resistant leather gloves, face masks, face shield) and receive pre-exposure rabies vaccination. Work in teams with at least three trained bat handlers. Minimise bat handling time. Avoid handling bats if there are open wounds on handler.	2	3	6 (M)	Bring field first aid kit (with iodine solution for immediate disinfection in the case of an accidental bite). Prepare emergency exit route to TTSH (hospital with post-exposure rabies vaccination). Prepare oral hydration salts and small syringes to feed and calm fruit bats down if they get overly stressed during handling and disentanglement.	Designated team leader for the project

CAMPHORA PTE LTD RISK ASSESSMENT

Severity	(1)	(2)	(3)	(4)	(5)
Catastrophic (5)	5 (M)	10 (M)	15 (H)	20 (H)	25 (H)
Major (4)	4 (M)	8 (M)	12 (M)	16 (H)	20 (H)
Moderate (3)	3 (L)	6 (M)	9 (M)	12 (M)	15 (H)
Minor (2)	2 (L)	4 (M)	6 (M)	8 (M)	10 (M)
Negligible (1)	1 (L)	2 (L)	3 (L)	4 (M)	5 (M)

H= High Risk, M = Medium risk, L = Low Risk

Likelihood	Description
Almost Certain 5	Continual or repeating experience.
Frequent 4	4 Common occurrences.
Occasional 3	Possible or known to occur.
Remote 2	Not likely to occur under normal circumstances.
Rare 1	Not expected to occur but still possible.

Severity	Description
Catastrophic 5	Fatality, fatal diseases or multiple major injuries.
Major 4	Serious injuries or life-threatening occupational disease (includes amputations, major fractures, multiple injuries, occupational cancer, acute poisoning).
Moderate 3	Injury requiring medical treatment or ill-health leading to disability (includes lacerations, burns, sprains, minor fractures, dermatitis, deafness, work-related upper limb disorders).
Minor 2	Injury or ill-health requiring first-aid only (includes minor cuts and bruises, irritation, ill-health with temporary discomfort).
Negligible 1	Not likely to cause injury or ill-health

Risk level	Risk Acceptability	Recommended actions
High Risk	Not acceptable	- High Risk level must be reduced to at least Medium Risk before work commences. - There should not be any interim risk control measures. Risk control measures should not be overly dependent on PPE or appliances. - If practicable, the hazard should be eliminated before work commences. - Management review is required before work commences.
Medium Risk	Tolerable	- A careful evaluation of the hazards should be carried out to ensure that the risk level is reduced to as low as reasonably practicable (ALARP) within a defined time period. - Interim risk control measures, such as administrative controls or PPE, may be implemented while longer term measures are being established. - Management attention is required.
Low Risk	Acceptable	- No additional risk control measures may be needed. - Frequent review and monitoring of hazards are required to ensure that the risk level assigned is accurate and does not increase overtime.

RISK ASSESSMENT FORM

Company :		Camphora Pte Ltd		Conducted by:		Derek Yap				Reference	
Process :		Conducting surveys of flora and fauna		Names, designations		Lead Arborist				Cam-EIA	
Location :		Forested sites		Date :		Jul-23					
First Assessment Date:		Jul-23		Project Name :		URA Turf EIA					
Last Review Date:		Jul-23									
1. Hazard Identification				2. Risk Evaluation				3. Risk Control			
1a.	1b.	1c.	1d.	2a.	2b.	2c.	2d.	3a.	3b.		
No.	Work Activity	Hazard	Possible Accident / Ill Health & Persons-at-Risk	Existing Risk Control	S	L	Risk Level	Additional Risk Control	Action Officer, Designation		
				(if any)					(Follow-up date)		
1	Mobilisation of project team	Unaware of site conditions and site-specific safety rules and regulations	Entering into prohibited areas, injury to persons	Ensure approval has been granted by clients/authority; carry approval letter if available; seek advice from clients regarding site access/conditions.	2	1	2 (L)	Study topography plans prior to entry.	Designated team leader for the project		
2	Working within natural/forested areas during the day	Falling branches, dangerous fauna, thorns, plants with sap that cause irritations, unobvious obstacles, uneven ground	Stings/bites/scratches, trips/slips/falls, head injury, feet injury, getting lost	Work in a group of at least 2 people; visually assess the surroundings for hornets/bees/snakes/dead branches/roots/protruding vegetation while walking; stamp feet and make loud noises when walking through thick vegetation; wear long sleeves and pants; wear appropriate close-toed footwear; use clear paths where possible; ensure experienced field personnel are present at all times; bring first aid kit.	3	1	3 (L)	Exit forested site during inclement weather; use GPS to track location; bring spare batteries for GPS; remain contactable by mobile phone.	Designated team leader for the project		
3	Night works	Dangerous fauna, getting lost	Stings/bites/scratches, trips/slips/falls, head injury, feet injury, getting lost	Work in a group of at least 3 people; visually assess the surroundings for hornets/bees/snakes/dead branches/roots/protruding vegetation while walking; stamp feet and make loud noises when walking through thick vegetation; wear long sleeves and pants; wear appropriate close-toed footwear; use clear paths where possible; ensure experienced field personnel are present at all times; bring first aid kit; avoid areas where crocodiles have been sighted; ensure sufficient light while working.	2	1	2 (L)	Use GPS to track location; bring spare batteries for GPS; remain contactable by mobile phone; bring spare batteries for torches/headlamps	Designated team leader for the project		
4	Working at water edges	Falling into water	To trips/slips/falls, drowning	Work in a group of at least 2 people; wear appropriate close-toed footwear; avoid working near the edge of deep water; wear life vest if working near the edge of deep water is necessary.	4	1	4 (L)	Conduct works during low tide.	Designated team leader for the project		

5	Working within mudflats, intertidal areas or water bodies	Soft substrate, large boulders, loose fishing lines, dangerous animals	Stuck in mud, stings/bites/scratches, trips/slips/falls	Work in a group of at least 2 people; be at most 2 m from the other personnel when in the water; wear appropriate footwear such as booties; wear long sleeves and pants; ensure experienced field personnel are present at all times; train personnel to move through muddy areas and identify points to avoid and traverse; bring first aid kit.	3	1	3 (L)	Ensure that a third individual is present on-site (and who is not in the water) and remains contactable by mobile phone; conduct works during low tide; be aware of tide times; ensure access to hot water to treat stings/bites by echinoderms, fishes, worms, etc.	Designated team leader for the project
6	Working near steep slopes	Falling from slope	Injury from trips/slips/falls	Avoid steep slopes.	2	1	2 (L)	Avoid works during inclement weather.	Designated team leader for the project
7	Working outdoors	Lightning	Lightning strike	Stop all work activity and seek shelter when there is lightning.	5	1	5 (M)	Continue work at least 30 minutes after the last lightning strike; monitor NEA app for lightning activity.	Designated team leader for the project
8	Working outdoors	Heat	Heat sickness, heat stroke	Bring plenty of water; take regular breaks	2	1	2 (L)	Wear light-coloured clothings.	Designated team leader for the project
9	Collection of plant specimens	Use of secateurs	Cuts and injuries by improper use of secateurs	Be aware of cutting points; do not deviate attention when making cuts.	2	1	2 (L)	Wear gloves.	Designated team leader for the project
10	General field work during Phase 2 of post-circuit breaker period	Physical contact with other personnel that can lead to the spread of the coronavirus	COVID-19 infection	Work in small teams of no more than 4 people; ensure proper record-keeping of personnel present for each work session; keep a minimum safe distance of 1 m from other personnel.	5	1	5 (M)	Support contact tracing by activating the TraceTogether app; check body temperature before starting work and see a doctor and do not go to work if temperature is 37.8°C or above.	Designated team leader for the project
11	Bat trapping and handling of live bats	Sustaining accidental bat bites	Potential spread of unknown diseases	Put on full PPE (bite-resistant leather gloves, face masks, face shield) and receive pre-exposure rabies vaccination. Work in teams with at least three trained bat handlers. Minimise bat handling time. Avoid handling bats if there are open wounds on handler.	2	3	6 (M)	Bring field first aid kit (with iodine solution for immediate disinfection in the case of an accidental bite). Prepare emergency exit route to TTSH (hospital with post-exposure rabies vaccination). Prepare oral hydration salts and small syringes to feed and calm fruit bats down if they get overly stressed during handling and disentanglement.	Designated team leader for the project

Severity	(1)	(2)	(3)	(4)	(5)

APPENDIX B – GOOD PRACTICES AND SAFETY TIPS

Tips to Proper Lifting Technique for Carrying Heavy Objects

Ref: <https://www.espinosafamilychiropractic.com/blog/409-lifting-technique-dos-and-don-ts>

This is extracted from the above-mentioned website.

When it comes to proper lifting technique, some of us may be missing the mark without even knowing about it, which can open us up to all sorts of workplace injuries, not to mention injuries at home, and even in the gym when we're trying to get fit. Below are some of the main Dos and Don'ts when it comes to lifting heavy objects.

Lifting Dos

Do make sure that you squat down and lift with your legs. Make sure that your feet are shoulder-width apart or thereabouts and that one foot is slightly ahead of the other, without sacrificing your center of gravity. Keep whatever you're lifting close to your body because when you hold that object outside from your body you're putting undue amounts of pressure on your back. Try to always grab a friend or co-worker to assist you when lifting a heavy object, too.

Lifting Don'ts

Make sure that you avoid bending over to lift an object and never lift with your back. If you have your feet too close together you will risk losing your footing and your center of gravity, so try to keep a wide base. Always avoid lifting heavy objects by yourself.

Figure B-1. Correct lifting technique for heavy equipment taken from online reference

Safety Tips when Using Tools for cutting

- Know the purpose and function of the tool well;
- Use the correct tool for the job;
- Use the tool properly and safely (including positioning of tool);
- Maintain the tool in good condition. Do not use a damaged tool;

- Cover the tool (if provided) after use. Avoid carrying a sharp tool in the pocket; and
- Return the tool to its proper place after use. Do not leave them lying around where they can become a tripping hazard.

Examples of Good Work Safety Practices

- Checking on NEA weather forecast prior to entering sites and regular monitoring of weather during work as weather can change suddenly

- Flagging out obstacles or holes in the ground or insects nests and other hazards such as fallen tree seen (See Figure B-2 below)

Figure B-2: Hazards out field were flagged and shared to all staff for awareness and avoidance. Top left photo shows a weaver ant nest; Top right photo shows a half broken tree trunk; Bottom photo shows an uncovered manhole that was initially hidden from sight due to the undergrowth

- Attending safety site briefing

- Wearing of helmet, safety vest and boots during pre-felling inspection in construction sites

- Properly secured using harness when personnel is being lifted up by a lorry crane

Past lessons learnt

In this section, learning points are shared from some of the past relevant cases of personnel injury. The objective is to prevent such occurrence as much as possible and educate our staff what they could do if they were to encounter similar situation.

It is important to note that the decision to continue or terminate the work depends on the severity of the injury and how remote or inaccessible the project site is. Team lead needs to exercise judgement and do proper risk assessment, bearing in mind the safety of the whole team. He/ She needs to be cognisant of the factors that can cloud their judgement, such as the strong pressure/desire to complete the task (missionitis), wanting to do things fast/ taking shortcuts, and complacency. If any member feels a certain act is unsafe, he should have the courage to speak up.

In any ambiguous situation, it is better to err on the safe side, end the work and leave the forest to seek medical attention. **Safety of everyone in the team is utmost important**, as the consequence of wrong decision can be severe.

1) Personnel feeling unwell during field work, work terminated

One fairly hot and humid day, a team of four personnel was surveying the vegetation in a project site. The site was an abandoned kampong, secondary forest with uneven terrain. All personnel were feeling fine before start of the work. Regular water breaks were taken. However, after a few hours of work, one personnel sounded that she was feeling faint and looked pale. They stopped work to find a suitable resting spot away from hazards, and rested a while. The unwell personnel was asked to drink up and eat something. Once she seemed all right, team lead assessed that it would be best for her to go back and rest, therefore the team ended the work earlier and all went out of the forest. As our work environment is typically in the forest where accessibility to road can be an issue, the team lead is right in deciding to end the work, even if personnel was okay after some rest. It will even be harder to evacuate and seek medical help if personnel were to become unconscious in the forest.

2) Personnel stung by wasps, work continued

Our flora team usually have to survey all the vegetation of project site, where it is typically forested environment. During one of the surveys, a team of four personnel was walking around to assess and tag the tree serial numbers onto the trees. There are two methods, either tying or nailing the labels. However, one tree happened to be near a paper wasp nest, and as our personnel approached the tree, one of them were stung twice, on his arm and shoulder. The whole team backed away from the wasps. As a norm, wasps will not chase after people or sting unless people are getting too close to their territory. Medicine was applied to ease the pain. The GPS location of hazard area was also logged down and flagged out to inform all our staff going to the site. The team leader assessed that it was dangerous for our personnel to continue tagging the trees in the vicinity of the wasp nest, thus decided to avoid and visually assess the tree condition as far as practicable. As the personnel did not exhibit any allergic symptoms towards the stings, and was not stung in critical areas such as head, face or neck, the team continued on with the work. The stung personnel also continued to monitor his own condition and if required, to seek medical attention.

APPENDIX C – SNAKE BITE MANAGEMENT PROTOCOL

This is a guide of first-aid measures for treating snake-bites. It is important to note that **anti-venom is the only effective treatment for snake venom**. Therefore, the **victim must be taken to a hospital immediately**. Avoid any traditional or herbal treatment.

Emergency contact numbers:

Phone number for Emergency Ambulance Service is 995. Hospitals that stock anti-venom are:

- National University Hospital – 6779 5555
- Tan Tock Seng Hospital – 6256 6011
- Singapore General Hospital – 6222 3322
- Alexandra Hospital – 6472 2000

Avoidance:

- Wear thick clothing and covered shoes, preferably boots.
- Always remain vigilant.
- When walking in forest, make sure to always look ahead of you, try to avoid contact with vegetation, and always watch where you step and where you place your hands.
- Avoid providing hiding spaces around construction areas.
- Avoid putting hands and feet in areas where you can't see – if lifting up material from the ground, be sure to wear thick gloves, lift the material up carefully and check underneath for snakes.

- If see any snakes, move away from them and DO NOT approach them or try to handle them.

Symptoms and signs of snake bites:

- Fang marks.
- Localised pain at site of bite (e.g., burning, throbbing, or blistering).
- Localised bleeding at site of bite.
- Localised swelling at site of bite.
- Gradual swelling extending upwards from bite.
- Pain and swelling of lymph nodes.
- Nausea, vomiting, headache, drowsiness, weakness, faintness, difficulty seeing
- If venom is spat into the eyes – burning and stinging pain in the eyes; spasm and swelling of eyelids; cloudy vision and temporary blindness, and; profuse watering of the eyes accompanied by whitish discharge.

What to do when bitten by snake:

- 1) Notify supervisors immediately and call 995.
- 2) Immobilise victim by having them lay down and immobilise the bite area – movement increases absorption of venom.
- 3) Reassure and calm the victim.
- 4) Take off any jewellery, helmets or hats, or any tight accessories.
- 5) AVOID touching bite wound.
- 6) DO NOT apply any tourniquet as that can lead to damaged tissues and necrosis.
- 7) DO NOT make any incisions or attempt to suck the venom out.
- 8) DO NOT apply ice pack or any topical creams.
- 9) Take photo of snake or get a good look at snake in order to describe how it looks.
- 10) Make sure victim is in an area where they can receive medical care promptly.
- 11) Use marker to draw circle around bite. Inspect the bite every 5-minutes and use marker to indicate progression of swelling.
- 12) In case of respiratory paralysis, have a trained first-aider administer CPR.
- 13) Treatment for Spitting Cobra - wash eyes with water for 5-10-minutes to wash the venom out. If there is notable pain, and if available, apply 0.5% adrenaline eye drops to relieve pain and inflammation.

By Dr. Alex Figueroa
