

Emissions Profile (2021)

Emissions: 53.7 MtCO₂e

The emissions profile above excludes estimated hydrofluorocarbons (HFCs) emissions of around 4.0 MtCO₂e from the Refrigeration and Air-conditioning (RAC) sector in 2021. When more robust estimates are established, the national emissions profile will be updated in accordance with the United Nations Framework Convention on Climate Change (UNFCCC) and Intergovernmental Panel on Climate Change (IPCC) guidelines on continual improvement of national GHG inventories.
