Get To Know Your BD Pump

NUHS@HOME
National University Health System

What is the BD Pump?

The BD BodyGuard™ infusion pump is a small, lightweight ambulatory infusion pump that offers flexibility, reliability, and comfort at home.

What can the BD Pump do?

- It safely administers your IV antibiotics on its own.
- It controls the timing and speed of the medication.
- It is small and easy to carry.
- Patients do not have to adjust anything — our nurses will program it, and it runs automatically thereafter.

How does the BD Pump help patients?

- With the BD pump, our nurse only needs to visit once a day, instead of three times. You still receive the same treatment, but with fewer interruptions.
- You get more privacy, more rest, and more convenience.
- Our nurses will still check the pump and your IV site daily to keep you safe.

What do patients need to do?

- Keep the pump charged.
- Keep the pump with you while it's infusing and keep it away from water when you are showering.
- Tell the NUHS@Home Care Team if you feel any pain or discomfort at the IV site.
- If the pump beeps, let your care team know via the 24/7 patient hotline: 8939 5794. We will guide you.
