INTRODUCTION AND AIMS	Results – 3months into implementation			
<p>Colorectal cancer is the number 1 cancer type in Singapore. Regular colonoscopy and the removal of colonic polyps remains the most effective means of reducing colorectal cancer risks for an individual.</p> <p>Whilst commonly done, colonoscopy is still regarded as a technically demanding procedure. We have to split our focus on mucosal exposure, manoeuvring the scope, and identification of polyps.</p> <p>Since July 2021, SKH have introduced an Artificial Intelligence (AI)-enabled software to improve the detection of polyps during colonoscopy.</p>	DEMOGRAPHICS	n (%)	OVERALL PERFORMANCE	n
	Total number of endoscopists	29	Number of AI-aided colonoscopies performed	298
	Endoscopists with ≥ 5 procedures with AI	18 (62.1)	Number of "hits"	487
	Specialty		Polypectomy:"hit" ratio (%)	250 : 487 (51.3)
	• Gastroenterologist	5/10 (50.0)	Adenoma : polypectomy ratio	171 : 250 (68.4)
	• General surgeon	13/19 (68.4)	Number of sessile serrated adenomas	14 (5.6)
Stakeholders / Methods of implementation				
Endoscopists				
<ul style="list-style-type: none"> - may be sceptical of new technologies and are worried of the medicolegal implications of using AI. - Many felt initially that the system would not improve their polyp detection rate and felt as though AI was a tool for audit rather than a tool to improve the quality of colonoscopies. 				
Nurses				
<ul style="list-style-type: none"> - were likely going to be enablers as there are ever-present in the endoscopy rooms. By educating them on the utility and benefit of the device to identify polyps, they acted as reminders and advocates for the adoption of the device, whilst at the same time upskilling in their assistance for endoscopy. 				
Routine and periodic assessment of results shown to the endoscopists and nursing team				
<ul style="list-style-type: none"> - Reinforce the impact of the GI Genius™ on our own practice - Good opportunities to allay their fears of using the technology - The staff were also able to provide feedback to refine processes and protocols around the use of the device. 				
Industry collaboration				
<ul style="list-style-type: none"> - Provision of sufficient units for trial and subsequent adoption was necessary to ensure quick and prompt adoption with sufficient momentum - Trial period to generate data to justify the continuous use of the device 				
CMB and CFO				
<ul style="list-style-type: none"> - After efficacy and cost analysis data was available, along with the survey results from our endoscopists, the pitch and buy-in from the Chief Finance Officer and Chief Medical Board would be required to support the perpetuation of the device 				
<p>The post-intervention adenoma detection rate was 30.4% was higher than the baseline polypectomy rate of 24.3% ($p=0.02$)</p>				
<p>Knowledge of AI:</p> <ul style="list-style-type: none"> • All understand common terms like "artificial intelligence" and "machine learning". • Only 56.3% understood more in-depth terms like "neural network" and "deep learning". 				
<p>Perceptions of AI in medicine:</p> <ul style="list-style-type: none"> • Most were optimistic about AI's capabilities in performing objective administrative (81.3%-93.8%) and clinical (62.5%-93.8%) tasks. • But most were reserved (93.8%) about AI providing personalised, empathetic care. 				
<p>Behaviours regarding use of AI-aided colonoscopy:</p> <ul style="list-style-type: none"> • 68.8% of endoscopists agreed or strongly agreed that GI Genius should be used as an adjunct in colonoscopy. 				
<p>Results – after 1 year</p>				
<p>50% of our endoscopy facilities being equipped with the GI Genius™ with >2500 colonoscopies performed with the GI Genius™ software. With >2000 polyps removed.</p>				
<p>Take home messages</p>				
<p>AI is increasingly permeating into healthcare where precision medicine is concern, from assisting doctors with diagnosis, reporting radiological scans and also guiding treatment for oncology. As healthcare professionals, we also do need to move with the times and embrace technology with the sole purpose of providing the best care for our patients.</p>
