

# Transforming Care: Automated Care and Clinical Quality Dashboard

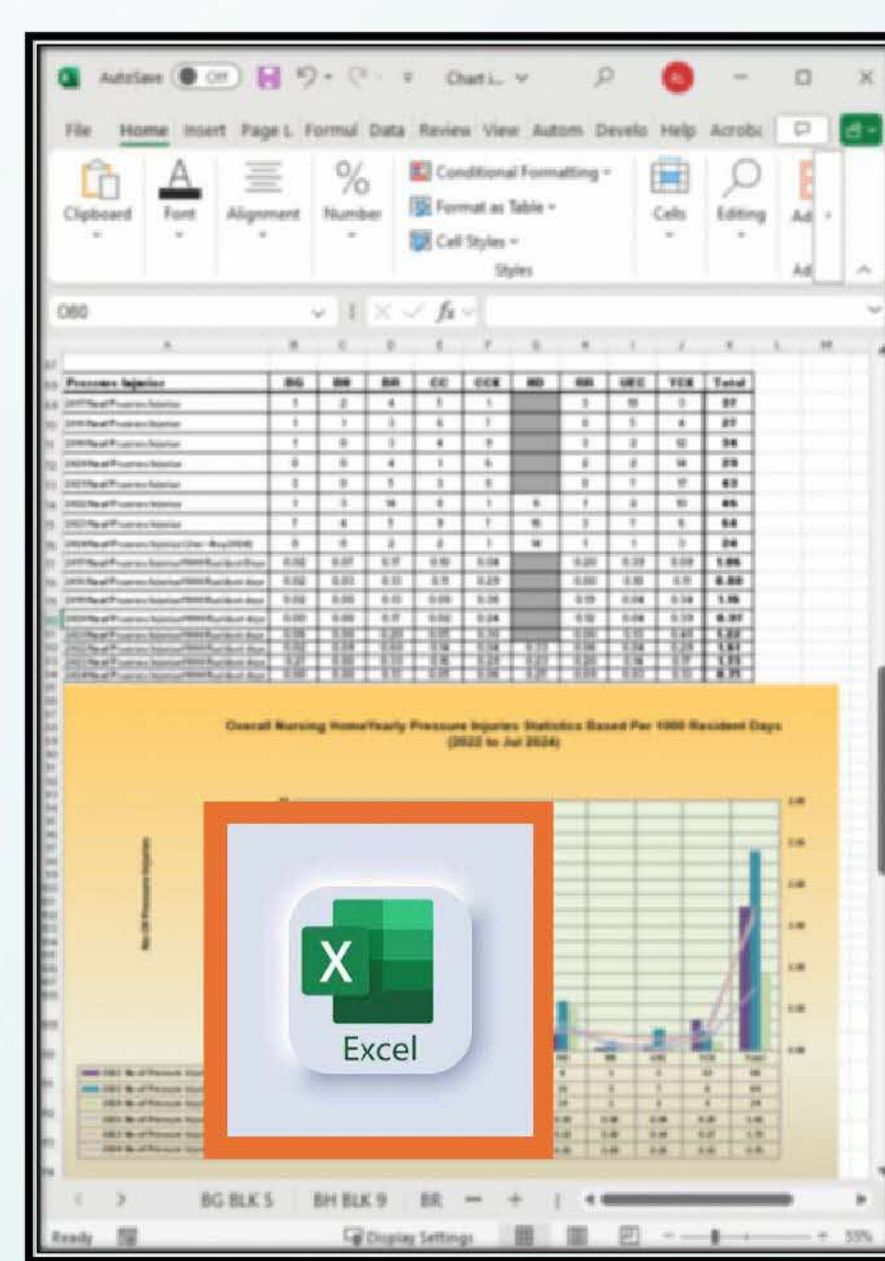

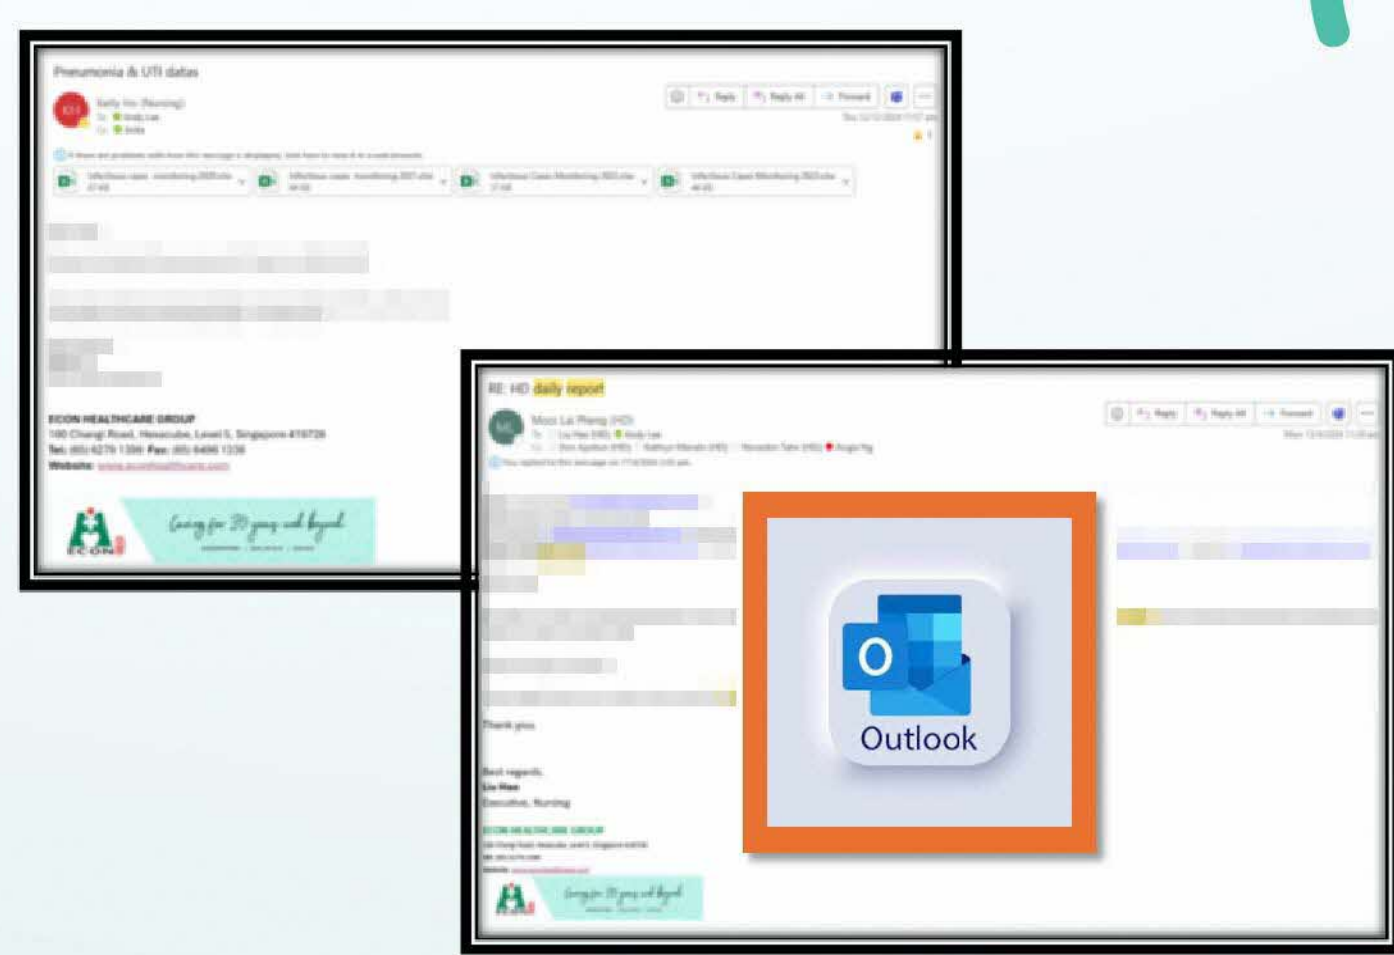

Innovation by Econ Healthcare Group

## Problem:

Manual reporting created significant administrative burdens, delaying responses to clinical quality trends and limiting nursing staff's focus on patient care.

## BEFORE

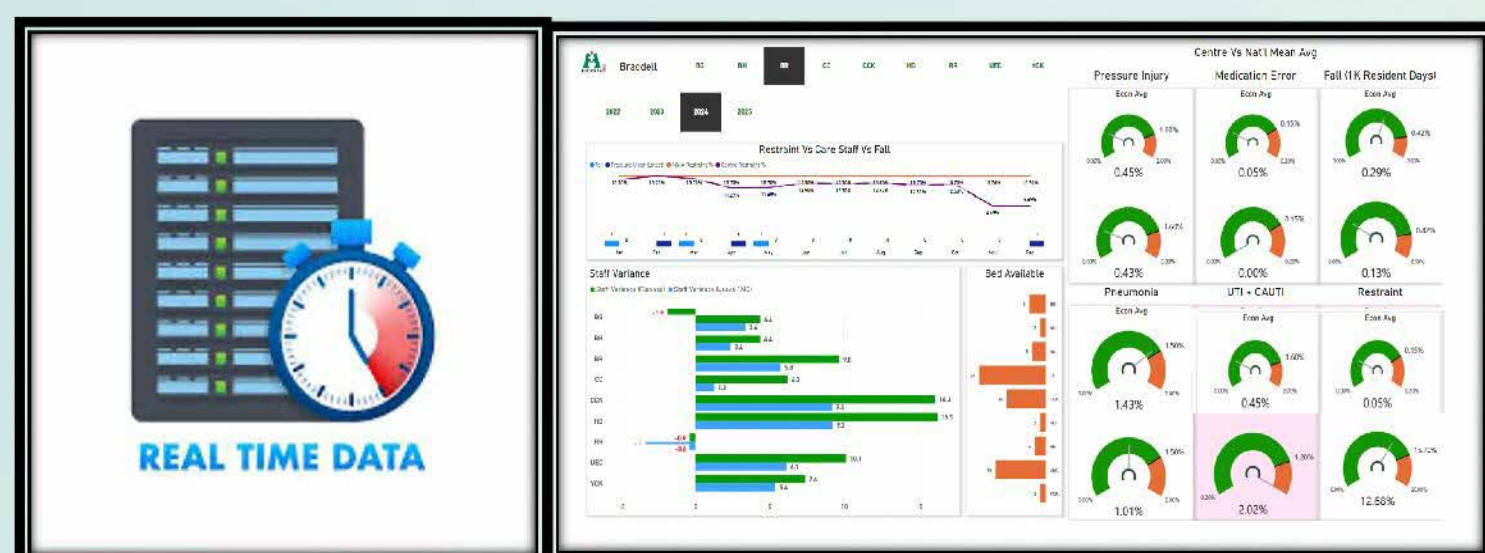

Manual, Paper-Based Reporting Methods: Inefficiencies led to inconsistencies, errors and delays. Staff feedback the need for solution.

## Solution:

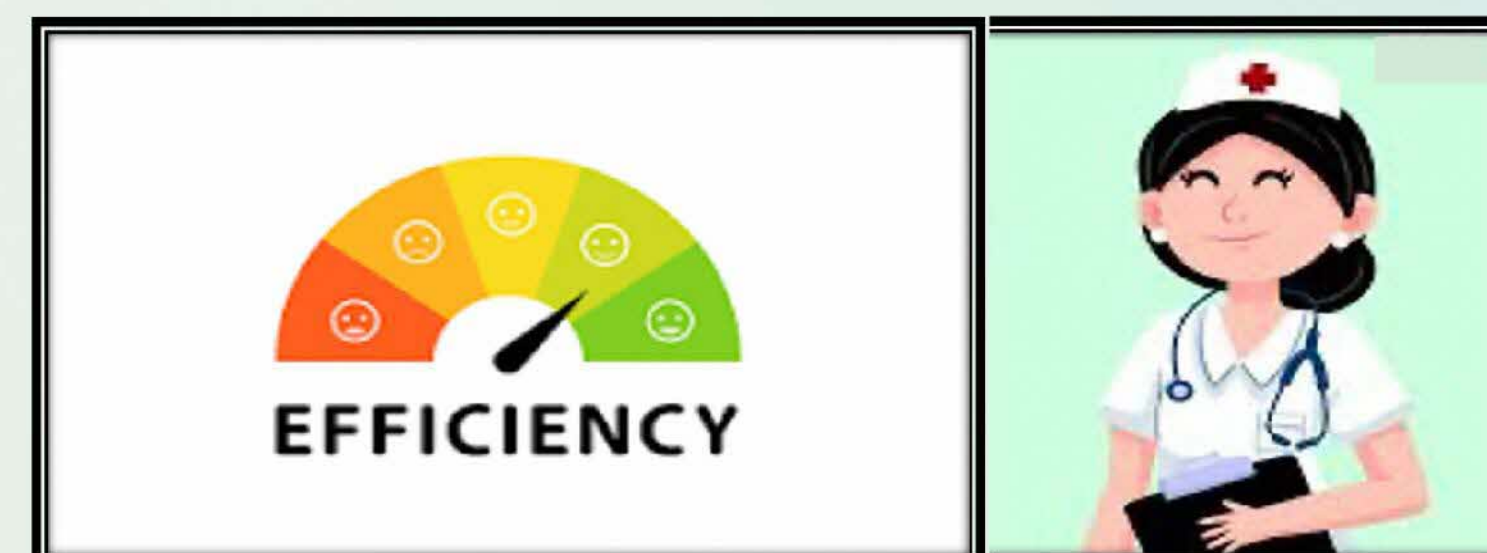

Power BI real-time tracking reduces admin workload, improves data accuracy, enhances staff allocation, optimises occupancy, and streamlines patient care.

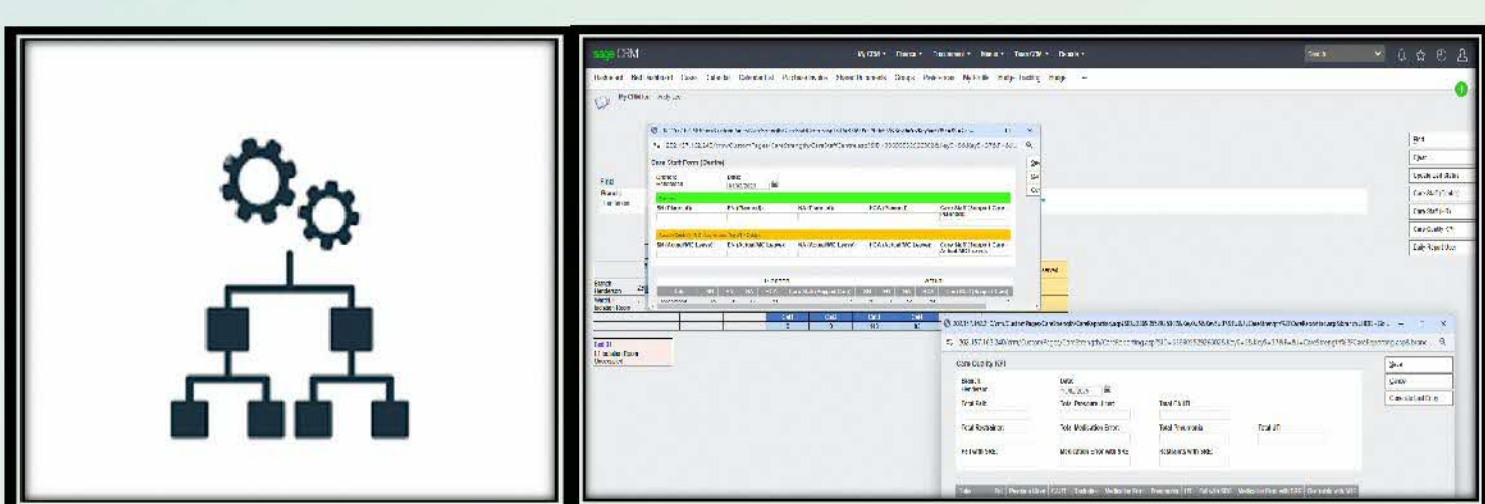

## AFTER

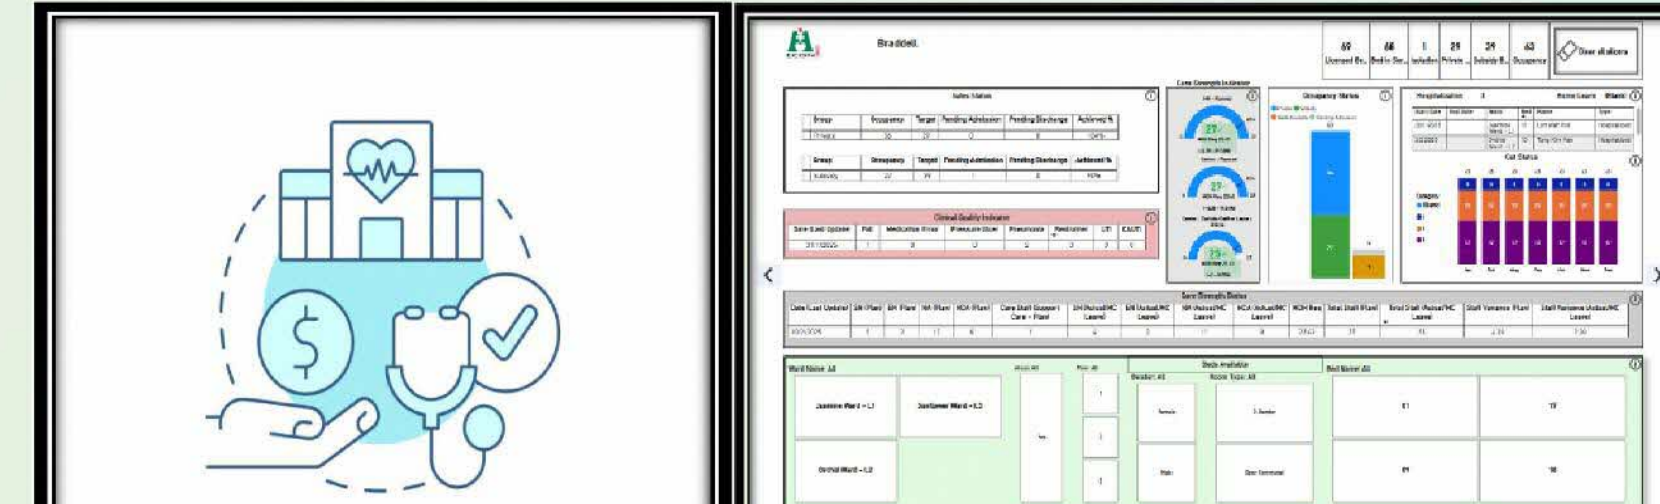

Improved real-time decision-making for nursing staff.

Reduce manual reporting from 3-5 days to 5 minutes per day.

Reduce input errors and delays. Real-time tracking enabled faster responses (e.g., falls, medication errors).

Estimated annual labour savings: SGD 12,262. Improved staff satisfaction and more time for patient care

## FUTURE

Robust design supports long-term operational, predictive modelling, and advanced analytics.

AI Predictive and Analysis: Platform supports predictive analytics and AI-driven monitoring.
