Tuesday, September 2, 2025

12.30pm - 2pm

Zoom Webinar

Transforming Health and Palliative Care Systems with AI: The Next Lap

As technology continues to reshape healthcare, its role in palliative care is becoming increasingly vital. This presentation is the second of a two-part webinar series that explores how innovative digital tools — from telehealth and mobile apps to artificial intelligence and virtual reality — are enhancing symptom management, improving communication, and supporting patient dignity at the end of life.

Drawing on current research and practical case applications, we will examine the ethical considerations, accessibility challenges, and future directions of technology-integrated palliative care. Attendees will gain insights into how these interventions can be thoughtfully implemented to support patients, families, and care teams in delivering compassionate, high-quality care across diverse settings.
