Urban Food Warriors is the school's distinctive ALP designed to address issues of sustainability. Especially apt in today's context, the pandemic has provided a timely reminder of Singapore's vulnerability in being highly dependent on other countries for our food supply. Students will take on the role of understanding the need to ensure and secure a supply of safe food for Singapore as well as advocating local production as one of it sustainability strategies to achieve 30 by 30 goal by 2035.

Peas don't be shy, come say hi!

A Tribute to Our School Gardener: Meet Mr. Dullah from Bangladesh

Every morning, before the school grounds buzz with the energy of students and teachers, a quiet transformation takes place. The vibrant hedges are trimmed, the flowers are tended to and the campus green spaces look pristine. The dedicated hands behind this beautiful landscape belong to our school gardener, Mr. Dullah. Originating from Bangladesh, Mr. Dullah has brought his immense talent, work ethic and warm spirit to Singapore for over a decade. His journey here is a testament to growth, adaptation and a deep love for nature.

A Decade of Cultivating Greenery

Mr. Dullah first arrived in Singapore in 2010, diving straight into the professional landscaping sector. For over ten years, he worked hard across the island, shaping and maintaining the outdoor spaces that Singapore is famous for. In 2021, following the massive disruptions of the COVID-19 pandemic, Mr. Dullah transitioned into school gardening. Since January 2026, our campus has been his canvas. Cultivating a school garden requires a special touch—it is not just about keeping plants alive, but creating an inviting, safe and inspiring ecosystem where students can connect with nature.

Finding a Safe Home Away from Home

While Mr. Dullah gives so much of his time to making our surroundings beautiful, he feels a strong sense of appreciation for Singapore in return. He often shares how much he values living and working here, highlighting a few key reasons that make the island special to him:

- ***A Kind Community***: He finds the people in Singapore to be genuinely helpful and kind, making his time away from home much warmer.
- ***Safety and Order***: The clear rules, structured regulations and top-tier security give him a deep sense of peace and comfort.

So the next time you walk past the school gates or find shade under a beautifully manicured tree, look out for Mr. Dullah. A simple smile, a wave or a warm "thank you" goes a long way in letting him know just how much our school community appreciates everything he does.

It's thyme to get started...

Roots of Legacy: *Our 50th Golden Jubilee* Tree Planting Journey

As part of our school's 50th Anniversary celebrations last year, each Primary 1 and Primary 2 family was assigned one of 50 planting plots, a meaningful number that commemorates our school's 50th golden jubilee. Together, parents and children planted young saplings, creating a living tribute to five decades of educational excellence, cherished memories, and strong community bonds.

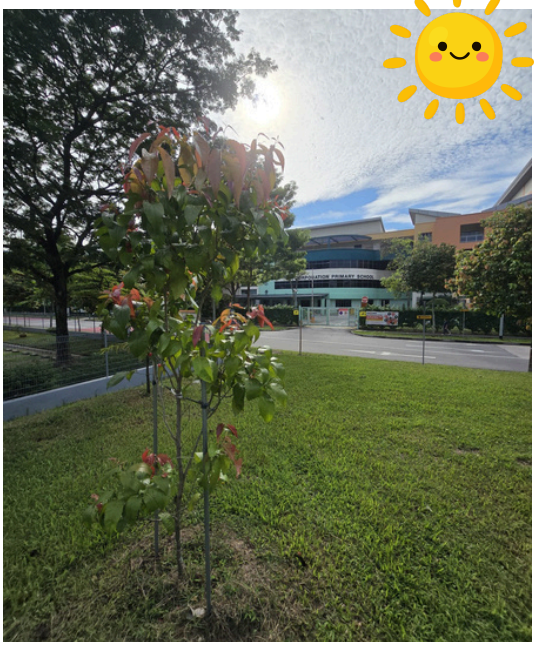

Our school also planted two Happiness Trees within the school grounds, symbols of good luck and prosperity. These special trees embody our hopes for continued joy, well- being and positive energy as we journey into the next chapter of our school's story.

This tree-planting initiative also contributes to NParks' OneMillionTrees movement, Singapore's national effort to plant one million trees across the island by 2030. Through this, our school community has played a meaningful role in creating a greener and more sustainable Singapore for future generations.

Today, these saplings are taking root and flourishing. Fresh shoots have emerged, leaves have become fuller and the trees stand taller and stronger than when they were first planted. Their steady growth mirrors the journey of our students and our school community. They remind us that when families and schools work together, we cultivate resilient learners, strengthen our community bonds and create a legacy that will continue to grow for generations to come.

ALP Green Ambassadors: Lower Pri Training with Checklist Cards

To support our P1 to P3 ALP Green Ambassadors in carrying out their roles with confidence, each ambassador is provided with a Green Ambassador Checklist Card. The checklist serves as a handy reminder of their daily responsibilities, such as switching off lights and fans when not in use, reducing waste, and care for the classroom environment.

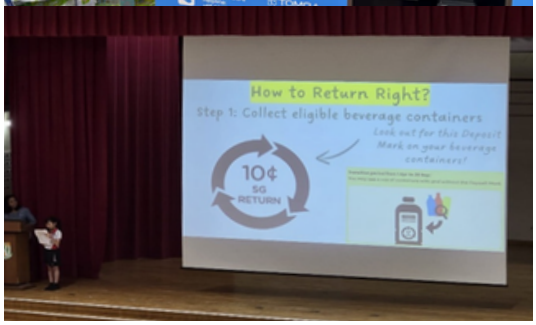

The card also encourages pupils to reflect on how they demonstrate our school's learning dispositions of Curiosity, Resilience and Confidence as they carry out their duties. Through regular use of the checklist, our young ALP Green Ambassadors develop responsibility, leadership and a sense of ownership in promoting sustainable habits within their classrooms.

ALP Green Ambassadors: Pre-assembly sharing by Micole Ng

Did you know that Singapore uses about 467 million plastic beverage bottles every year? That works out to an average of 156 bottles per person annually! With Semakau Landfill, Singapore's only landfill, filling up rapidly, it is increasingly important for everyone to reduce waste and recycle responsibly.

To support Singapore's vision of a greener, zero-waste future, the Beverage Container Return Scheme (BCRS) was launched on 1 April 2026. The scheme aims to increase household recycling rates, reduce contamination in recycling bins, and divert recyclable beverage containers away from incineration, helping to extend the lifespan of Semakau Landfill.

To raise awareness of this national initiative, ALP Ambassador , Micole Ng from Primary 3.4, was selected to share the Beverage Container Return Scheme with the school community during pre-assembly. During her presentation, Micole explained the importance of recycling beverage containers correctly and highlighted how every individual can contribute towards protecting the environment. Students also learnt how to identify eligible beverage containers by looking out for the Deposit Mark and were introduced to the nearby Return Right Reverse Vending Machines, where they can return their containers. Through this sharing, students were encouraged to become recycling champions and make recycling a simple, everyday habit for a more sustainable Singapore.

Primary 2: Marine Conservation

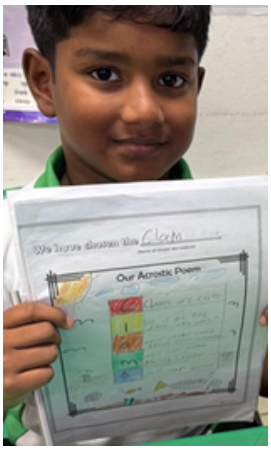

Our Primary 2 pupils embarked on an enriching and memorable learning journey to the Singapore Oceanarium (formerly the S.E.A. Aquarium). Now three times larger, the Oceanarium features 22 immersive themed zones dedicated to marine education and conservation, offering pupils exciting opportunities to discover the wonders of the underwater world.

The visit complemented their STELLAR unit, Life in a Shell, where pupils learnt about shelled animals such as tortoises and turtles. They were captivated as they observed a diverse range of marine life, including sharks, sea jellies, corals and whales, bringing their classroom learning to life.

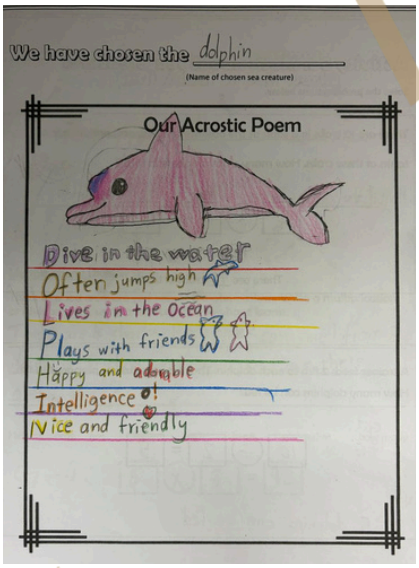

The learning journey continued back in school through Applied Learning Programme (ALP) lessons, where pupils explored the importance of marine conservation. They discussed environmental issues such as plastic pollution and considered practical ways they could help protect the marine animals they had encountered. Their learning was further reinforced during English and Mathematics lessons, where they expressed their understanding through acrostic poems and applied mathematical concepts to marine-themed problem sums.

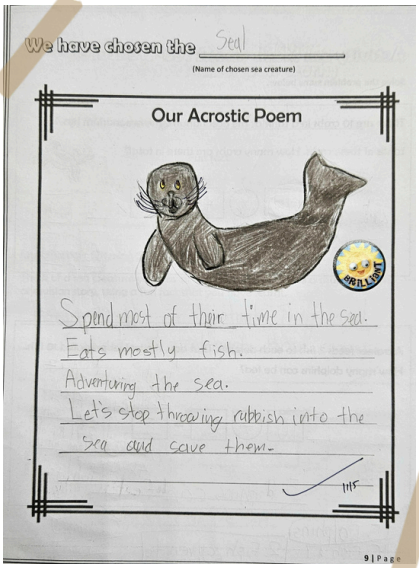

Together, the learning journey and integrated classroom experiences provided pupils with a meaningful understanding of marine ecosystems, inspiring them to become responsible stewards of our oceans and environment.

That's all—carrot on with your day!

Primary 4:
Waste Management

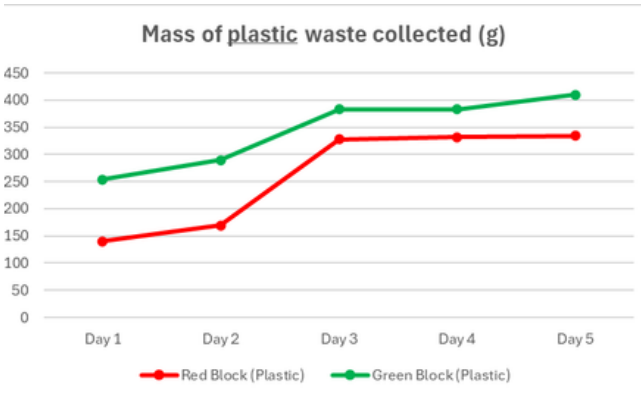

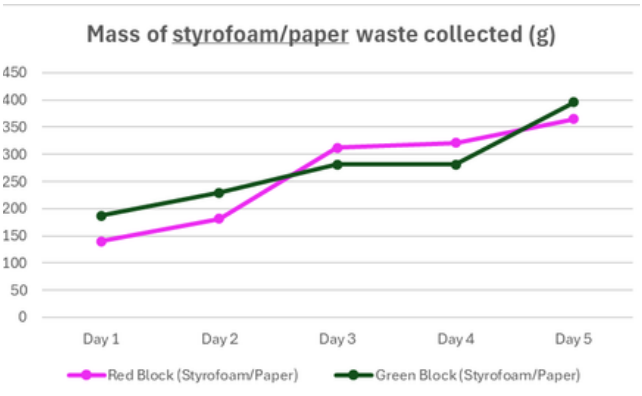

Our Primary 4 students recently embarked on an exciting, interdisciplinary Applied Learning Programme (ALP) centered on waste management, blending sustainability across their subjects. Their journey began in Social Studies, where students explored global perspectives by examining different waste management systems around the world. Inspired by these global practices, they transitioned to Science lessons, where they designed an experiment to investigate and compare the amount of waste generated by the classrooms at the Red Block and the classrooms at the Green Block.

This led to our highly anticipated, week-long waste collection activity. Students from both blocks diligently collected all plastic and paper waste produced during their daily snack breaks. Our dedicated ALP Green Ambassadors championed this phase, displaying responsibility by measuring and recording the mass of the waste containers every single day during their lunch breaks.

Once the data was gathered, students integrated it back into their academic curriculum. In Science, they analysed the results to compare the mass and volume of each type of waste. Meanwhile, in Mathematics lessons, they transformed these numbers into line graphs and analysed the trends. Through this data-driven approach, students successfully achieved the core objective: recognizing the surprising amount of waste generated from consuming just a single food item.

To develop their empathy for the environment, students concluded the journey in English lessons with a creative writing activity, penning imaginative stories from the unique perspective of a discarded waste item. These activities achieved our ALP goals, bridging classroom concepts with real-world contexts. We are immensely proud of our P4 students and ALP Green Ambassadors for driving positive change. We hope that they learnt that small, conscious habits can lead to a big, sustainable difference!

Brought to you by the ALP Team
