

MOH DIABETES MELLITUS CLINICAL PRACTICE GUIDELINES

ADDENDUM

This addendum is to replace the grades of two recommendations that have been revised. These recommendations, with their revised grades, are reproduced below. Please attach this addendum to the CPG.

On page 141 of full CPG document (and page 27 of the summary booklet):

D Infants of women with diabetes who present with clinical signs of hypoglycaemia should have their blood glucose tested and be treated with intravenous dextrose as soon as possible.³¹² Close monitoring of blood glucose levels is necessary within the first 48 hours of the baby's life.

Grade D, Level 4

On page 142 of full CPG document (and page 27 of the summary booklet):

D Close monitoring of blood glucose levels is necessary within the first 48 hours of the baby's life. Infants of diabetic mothers should be fed early.³¹²

Grade D, Level 4

On page 165 of full CPG document (and page 35 of the summary booklet):

Blood pressure	Percentage of patients with most recent blood pressure <140/80mmHg
----------------	--
